## Arbitrary/Function Generator AFG1000 Series Datasheet

The AFG1000 Series Arbitrary Function Generator provides a waveform generation tool with the best price performance ratio. It includes two models with dual channels, up to 60 MHz bandwidth and up to $10 \mathrm{~V}_{\text {p-p }}$ output amplitude. The four run modes, 50 built-in frequently-used waveforms and the built-in 200 MHz frequency counter cover most waveform generation needs in your experiment and test jobs. The 3.95-inch TFT LCD, short-cut buttons, USB interface and PC software provide the most intuitive ways to configure the instrument.

## Key performance specifications

- Dual-channel, 25 MHz or 60 MHz sine waveforms, 12.5 MHz or 30 MHz square waveforms
- 14 bits, $125 \mathrm{MS} / \mathrm{s}$ or $300 \mathrm{MS} / \mathrm{s}$ arbitrary waveforms with 8 k points record length
- Amplitude $1 \mathrm{mV} \mathrm{V}_{\text {pp }}$ to $10 \mathrm{~V}_{\mathrm{p}-\mathrm{p}}$ into $50 \Omega$ loads

## Key features

- Continuous, sweeping, burst, and modulation modes (AM, FM, PM, ASK, FSK, PSK, PWM) covers most requirements for students and other users to get the experiments/test job done
- 64-MByte internal non-volatile memory for arbitrary waveform storage
- Built-in 200 MHz counter with 6 -digit resolution offers an easy and precise way of frequency/period/pulse width/duty cycle measurement
- Standard USB host/device for memory expansion and remote control
- Free ArbExpress makes user defined waveforms editing extremely easy through an external USB memory stick
- Standard 5 -year warranty

## Applications

- Electric and electronics experiments
- Communications experiments
- Sensor simulation
- Functional test

## Performance and features

$1 \mu \mathrm{~Hz}$ to 25 MHz or 60 MHz sine waveform range, with 12 -digit or $1 \mu \mathrm{~Hz}$ resolution and a $\pm 1 \mathrm{ppm}$ drift high stability time base, provides great signal fidelity in the frequency domain. With $1 \mathrm{~m} V_{p-p}$ to $10 \mathrm{~V}_{\mathrm{p}-\mathrm{p}}$ output amplitude range, and 14 -bit or 1 mV p-p resolution over the whole frequency range, there is no need to compromise between output amplitude and frequency any more.

Four different run modes cover most use cases with a cost effective solution. 50 most-frequently used standard and arbitrary waveforms are built-in for easy access. Up to 8 K points arbitrary waveforms memory enables users to replicate real world signals captured with a Tektronix oscilloscope or defined with ArbExpress. The built-in 200 MHz and 6 -digit resolution frequency counter is an easy and precise way to measure frequencies/periods/pulse widths/duty cycles.

## Ease of use

The high-resolution 3.95 -inch color TFT display shows relevant settings and parameters in both text and graphic formats, which give users full confidence in their settings, and let them focus on the task at hand. The front panel shortcut buttons and rotary knob make accesses to most frequently used functions and settings with minimum effort and time. The built-in 64-MByte non-volatile memory together with USB stick memory interface, provide unlimited space for user-defined waveform storage.

## Software and solutions

The user-defined arbitrary waveforms generated by the free ArbExpress software can easily be loaded on the AFG1000 with a USB memory stick.
