

## Gas cooler series EGK 4S

In the chemical industry, petrochemistry or biochemistry, reliable process control relies on prompt and exact determination of the operating parameters.

Here, gas analysis is key for safe and efficient control of process flows, environmental protection and quality assurance. This benefits controlling flue gas emission in power stations or exhaust gas analysis in automotive engineering, as well as the efficient control of air separators or sterile production and packaging in the food industry.

Many of the analysis processes used in these fields require extracting the sample gas. This inevitably also extracts process-related contamination such as particles or moisture. These in turn can impact the measurement results or damage the measuring cells. The sample gas must therefore be conditioned before entering the analyser.

The EGK 4S is a compressor sample gas cooler for up to 8 separate gas paths and is an essential component in sophisticated analysis systems.

For 19" rack installation, wall mounting or desktop housing

Compact size

Up to 4 stainless steel, glass or PVDF heat exchangers per unit, up to 8 gas paths available upon request

Electronic control with cooling block temperature display

Self-monitoring with contact output  $\pm 3\text{ }^{\circ}\text{C}$

Rated cooling power 800 kJ/h

Dew point stability  $\pm 0.2\text{ }^{\circ}\text{C}$

CFC-free

## Performance Data

Note: The limit curves for the heat exchangers exchanger apply to a dew point of 65 °C.

## Technical Data

## Gas Cooler Technical Data

Ready for operation	after max. 15 minutes		
Rated cooling capacity (at 25 °C)	800 kJ/h		
Ambient temperature	5 °C to 50 °C		
Gas output temperature, preset:	5 °C		
Dew point fluctuations static:	0.2 K		
in the entire specification range:	± 2 °C		
Protection class	IP 20		
Housing	Stainless steel		
Packaging dimensions	approx. 510 x 355 x 450 mm		
Weight incl. 4 heat exchangers	max. 32 kg		
Electric supply	115 V, 60 Hz or 230 V, 50 Hz		
Status output switching capacity	250 V AC/ 150 V DC Changeover contact 2 A, 30 VA		
Electrical Data	230 V	115 V	
	Typical power input:	240 VA	215 VA
	Max. operating current:	2.5 A	4.6 A
Starting current	10 A		
Status output switching capacity	250 V AC/ 150 V DC Changeover contact 2 A, 30 VA

## Heat exchanger description

The energy content of the sample gas and the required cooling capacity of the gas cooler is determined by three parameters: gas temperature  $\vartheta_G$ , dew point  $\tau_e$  (moisture content) and volume flow  $v$ . The outlet dew point rises with increasing energy content of the gas. The approved energy load by the gas is therefore determined by the tolerated rise in the dew point.

The following limits are specified for a normal standard operating point of  $\tau_e = 65^\circ\text{C}$  and  $\vartheta_G = 90^\circ\text{C}$ . The maximum volume flow  $v_{\max}$  in NI/h of cooled air is indicated, so after moisture has condensed.

If the values fall below  $\tau_e$  and  $\vartheta_G$ , the flow  $v_{\max}$  may be increased. For example, on the heat TG heat exchanger, the parameter triple  $\tau_e = 50^\circ\text{C}$ ,  $\vartheta_G = 80^\circ\text{C}$  and  $v = 350$  NI/h can also be used in place of  $\tau_e = 65^\circ\text{C}$ ,  $\vartheta_G = 90^\circ\text{C}$  and  $v = 250$  NI/h.
