Dear Sir/Madam

RE: HOSPITAL INFORMATION AND PARTNERSHIP ACKNOWLEDGEMENT

St Michael's Mission hospital is serving as a district hospital for the Mhondoro-Ngezi District thus a referral centre for twenty rural health facilities dotted around the district. We serve an estimated population catchment of 110 000 for Mhondoro. It is a carrying capacity of 104 beds for inpatients and a busy outpatient offering varying services from VIAC screening, O.I services, Rehabilitative, Radiography and Laboratory services amongst others. The hospital is currently being serviced by one borehole that is 80 metres deep and with a 1 kilometre distance from where it is situated to the hospital premises. The pump is a 5, 5 horsepower which is able to fill in the capacity of our tanks which have 40 000 litres capacity for the concrete one and 10 000 litres respectively for the three black tanks.

We are very grateful to the Health Gateway Africa Trust for partnering with St Michael's in order to help us offer comprehensive quality services to our beloved Mhondoro community by them offering us assistance through water and sanitation health services, that is affording the hospital a solar backup to our borehole and the digging of trenches around the hospital for piping with. It is a huge honour to be remembered in such a time as this.

Sincerely Grateful,

Mukwirimba G,
Hospital Administrator
