4) use this period as a window of opportunity to redefine and reframe - in the context of and under the influence of (AI) technology - traditional philosophical notions such as ethics, fairness, equity.

Abstract: Fundamental transformations are taking place in the Netherlands, in Europe, and throughout the rest of the world, culturally, socially, economically, politically and technologically. These transformations are leading to uncertainties about the societies we live. In this talk, I contend that in order to comprehend currently ongoing fundamental transformations and to direct these transformations toward desired societies, it is important to: 1) value the historical depth of our society(ies) and to appreciate this cultural heritage, 2) envision various future scenarios, 3) see the present as a "in-between" period during which major transformations are taking place, and

ence of (AI) technology - traditional philosophical notions such as ethics, fairness, equity.

HERILAND is a pan-European research and training network on cultural heritage in relation to Spatial Planning and Design. It is funded by the European Union's Horizon 2020 research and innovation programme under the Marie Skłodowska-Curie grant agreement No 813883
