Bring together what belongs together.

When you can see the quality of a product, knowing that it started off as nothing more than a handful of raw materials, there can be no doubting the level of manufacturing standards and technical expertise that has gone into its development and creation. This is the ambitious goal that drove the development of our new 4007ci, 5007ci and 6007ci colour multifunctional systems. They set new standards in terms of quality, speed, safety, flexibility and usability. Case in point: The Trusted Platform Module (TPM) comes integrated as standard on all models. This security chip encrypts confidential information on the device and is stored in a dedicated storage area. This storage area cannot be read from outside the TPM, meaning confidential information can be safely protected. The security of your data is our top priority.

Your benefits

Goodbye to paper: If you want to move towards a paperless way of life in your office, opt for a document feeder with an ultrasonic sensor for multi-feed detection. Original documents can be scanned and digitised at a rate of up to 220 image sides per minute, at 300 dpi in colour and black and white. Additionally, the integrated HyPAS™ interface makes it possible to use a range of different HyPAS™ applications, as well as to incorporate customer-specific software solutions that will make your work more sustainable and require less paper.

Flexibility at its best: Paper weights of 52 to 300 g/m² and formats ranging from A6R to SRA3 are processed from the paper cassette. Thanks to the space-saving internal finisher with capacity for 50 A4-sheet stapling and the 4,000-sheet finisher with 100-sheet stapling capacity, larger projects can be professionally stapled and hole punched*. The final touch on finishing options is the brochure module*. It allows for the creation of perfect brochures of up to 80 pages. To make all this possible, the system can hold up to 7,150 sheets.

Play it safe: Security in office communication is a challenge for any company. To help protect your data, our systems already fulfill important safety standards in basic configuration. This security solution protects your confidential information from the very beginning, at system level: it overwrites and encrypts copy, scan and print data even before it's saved to disk. In addition, the memory area for output data is automatically wiped clean.

Mother Nature says thank you: It's very important to us to use resources carefully. The systems therefore not only come with improved TEC values – they also avoid waste thanks to their longevity. The systems have been designed to meet future environmental and energy requirements. We're always thinking ahead.
