Great security means greater confidence!

In today's society, data security has become the highest priority. This applies to your own digital and analogue data, as well as to customer data. To increase the security of our systems, the Trusted Platform Module (TPM) is now available as a standard element in the new 2507ci and 3207ci A3 colour multifunctional systems. This security chip encrypts confidential information on the device and is stored in a dedicated storage area. This storage area cannot be read from outside the TPM, meaning confidential information can be safely protected. These are characterised not only by their high level of data security, but also by their reliability and functionality. Choose between four optional document feeds for optimal flexibility, so you can tailor scan and copy processes to your workflow. The 10.1 inch colour touch display also gives you intuitive control over these multifunctional systems.

Your benefits

Less paper: Get one step closer to a paperless office with the document feeder with ultrasonic sensor, which offers multi-feed detection*. Documents can be digitised at a rate of up to 180 pages per minute (300 dpi, b/w and colour) – and most importantly, they can be scanned in a more relaxed manner. Errors during scanning are avoided thanks to the ultrasonic sensor. Additionally, the integrated HyPAS™ interface makes it possible to use a range of different HyPAS™ applications, as well as to incorporate customer-specific software solutions that will make your work more sustainable and require less paper.

Safer: Security in office communication is a challenge for any company. To address this, our systems already met current safety standards in basic configuration. This security solution protects your confidential information from the very beginning, at system level: it overwrites and encrypts copy, scan and print data even before it's saved to disk. In addition, the memory area for output data is automatically wiped clean, preventing it from being restored.

More flexible: The new MFPs have adapted excellently to the increased need for greater flexibility. From the paper capacity (up to 7,150 sheets) and formats (A6R to SRA3) to the paper weights (52 to 300 g/m²) the new systems also offer a wide range of finishing options.* For example, an internal 500-sheet finisher with multi-position stapling and a two- and four-hole punch*.

Cleaner: Today, environmental standards have to be constantly updated. For us, this presents not only a challenge but also an incentive to design our systems in an environmentally friendly way. We achieve this through improved TEC values, use of long-lasting components, high maintenance intervals and low noise emissions. We're always thinking ahead.
