

Your convenient gas leakage test device

Minimize your risk of gas incidents & accidents

Maximum gas safety is termed as the main concern of all the gas appliance users. LPG is termed as a very safe fuel to consume but accidents can happen suddenly. The GasOkay® leak test device is totally a new, and an easy way to minimize the risk.

GazOkay® Standby Mode

GazOkay® Test Mode

1 Instant gas leak test

GasOkay® will test your entire gas supply line instantly. Just by pressing of the knob you will see the instant results where it's built-in the transparent window filled with its liquid. It is termed to be as easy as it is needed to be visually detected even a minor indication of gas leakage can be easily identified.

2 Flexible installation

GasOkay® is very easy to install. It can be very conveniently mounted at the inlet of your gas appliance, immediately right after its regulator or say anywhere in the pipeline which is in between or near by the place of installation. You have to choose between an upright or say downward position version of the GasOkay® unit, whichever it fits the best with your gas appliance actual location.

3 Fits different setups

GasOkay® also works with all various types of gas cylinders and its regulators which is well piped gas and is carried from a central supply system. It has multiple variants which are easy and can be fit in different setups. You have to choose them in between the threaded connections or hose nozzle/sleeve/or compression fittings which is easy for installation.

As a global gas regulator manufacturer IGT takes pride in product quality & durable products. We support UN Sustainable Development Goals with special focus on 3, 12 & 13. An extended product lifetime reduces environmental footprint.

GazOkay® Standard

Accessory: Diode Light-Lamp

GazOkay® With Aluminum Wall-Table Bracket

GazOkay® Product Specifications

Approvals	Comply to DWGW G 5952 (pending certification)
Threaded connections	1/4" LH EN560 - 5/8" UNF ANSI/ASME B1.1 - 1/2" BSP EN10226
Nozzle connections	8mm - 9mm - 10 mm - 11 mm
Material	Plastic – Aluminum – Brass
WP max	100 mbar
Test pressure	2 Bar
Compression fittings	8mm - 10 mm - 3/8"

Always test your gas system before use GazOkay® makes it easy

Risk Statistics

USA:

7000 people are hospitalized every year due to LPG Gas Leakage

- Incident rate 1:700 installations
- Accident rate 1: 7000 installations
- Fatality rate 1: 2 million installations

Europe:

In Europe, accident rate is termed to be higher on average than in the US and is caused due to multiple gas systems in its use. In the EU indoor applications, they are more widely used compared to US.

Developing countries:

The accident rate in developing countries is around 10-25 times higher than in the US.

Data source for Europe & developing countries: IGT estimation based on empiric observations
