Means to enhance transformative change

- **Bring people into a broad societal transformative alliance**
 - out of your comfort zone
 - talk with people who
 - do not share the same interests and values
 - BUT do share the same narrative: we need to do things differently
- **Establish projects that can show transformative change works and benefits society**
 - success stories are needed to give credibility to the narrative of change.

Storytelling and learning: Seeds of change

Current initiatives with the potential to engender transformative change. Going beyond mapping, measuring and modeling elements and qualities of ecosystems, these initiatives actively challenge existing social, economic, political and technological systems. Not through optimization or efficiency measures, but by changing course.

Currently ongoing

● MAIN OUTCOMES:

- 146 potential Seeds of change were collected but not in all member states
- Checklist with 10 questions to support reflection and creative thinking on the key items that can “transitionise” project ideas

● RESULTS:

Average score per quality

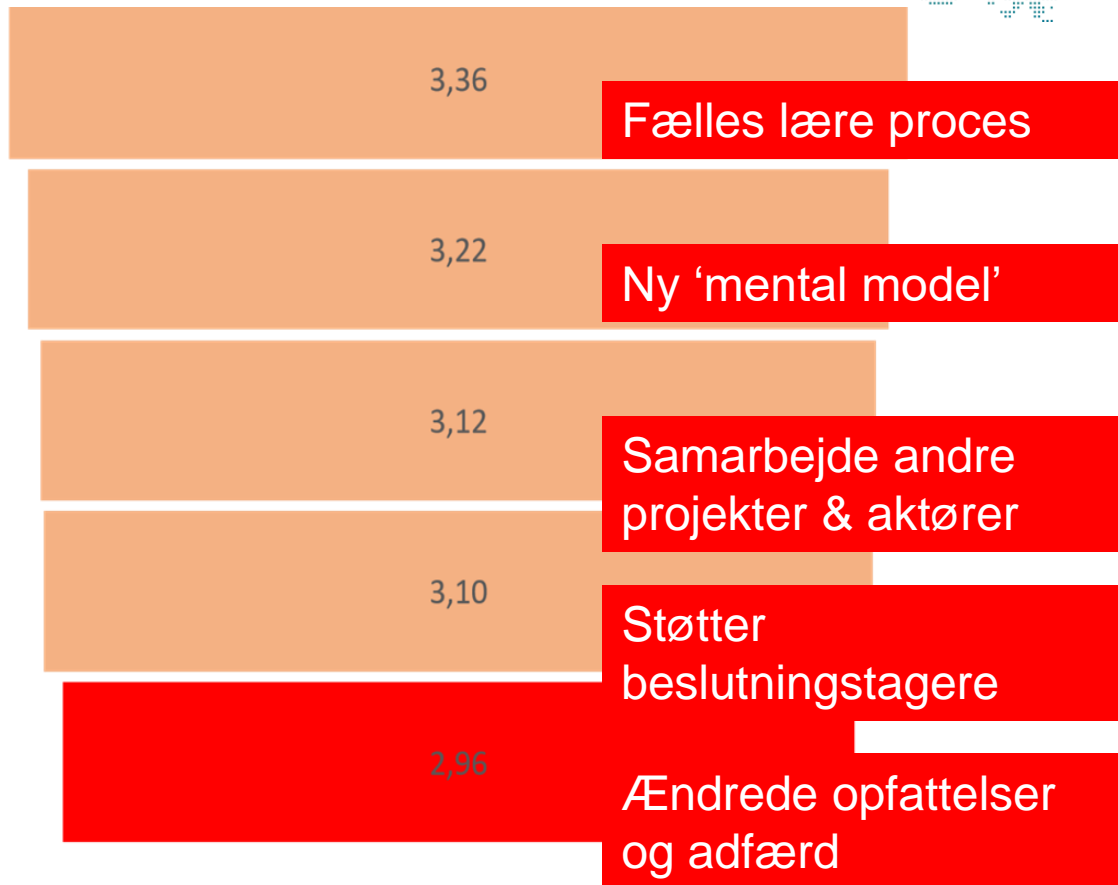

The initiative stimulates joint reflection on the root causes of the problem, and dedicates a significant amount of time and effort to the collective learning process.

The initiative challenges established 'mental models' (any sort of concept, framework, or worldview that people have to explain life).

To create leverage for structural change (in policy, markets, culture etc.) the initiative actively connects to other projects and/or broader coalitions of actors.

The initiative actively supports (other) policy makers, companies, communities etc, who are not directly involved in the initiative, in adopting/developing new approaches and revising existing policies

Next to more established parameters for measuring biodiversity and ecosystem functioning, the initiative also assesses less tangible, qualitative aspects such as perception shifts, changing behavior

Some examples

Slovenia/Sweden/Greece | Study circles

"Study circles has this role (seed of change) ever since. The focus of change has been changing itself - e.g. they started with the focus of democratisation of society, later focused to foster learning in all life-stages and empowering marginal target groups, now stimulating participation and green transition - but still keeping past accents."

Belgium | : 6-Week program Nature Connectedness

"in mental well-being, nature connectedness appears to provide health benefits that exceed the (already well documented) benefits of contact with nature. The program combines individual nature exercises with weekly group meetings in a green environment to exchange experiences and be motivated to keep up the program

Latvia | Removing obstacles from rivers

"Public interest wins over narrow economic interests" + "Seed to other new seeds - the success story of Lielā Jugla river as an inspiration for others to free their nearby rivers from obstacles"

Albania | Save the blue heart of Europe

"A special case of successful bottom-up process, where science-based knowledge about the biodiverse river network is becoming legally binding, under the large involvement of the local and international public"

Norway | Tree crown project

"Open source data and applications making this non-proprietary technology that is designed to be adopted by municipal agencies without the need for private consulting services."

Next steps

- Selection of 27-30 projects for in depth analysis
 - What are the important qualities?
 - Role of the context (growing environment of the seeds)
 - Leverages and barriers
