

Iridium Waterproof Communication Systems ApS (IWCS) is posting this Notice on its website to advise its customers and potential customers that IWCS is compliant with the REACH Regulation.

REACH has two main areas of focus;

The first being the registration of import materials.

- IWCS does not fall under this requirement since it does not import raw materials into Europe. IWCS only imports finished articles under the auspices of REACH and therefore does not need to register.

The second focus of REACH is to inform customers of safe handling for “Substances of Very High Concern” (or SVHC).

- The REACH regulations cover various SVHC substances and provides safe handling instructions for those substances. The list of SVHC substances is dynamic and is subject to changes at times. The current list is available by clicking this [link](#) to the European Chemicals Agency (ECHA) - Candidate List. IWCS periodically reviews this list and will, when required, subject its products to external laboratory tests to determine if any of such SVHC substances are present in its products.

IWCS is confident that it does not use any of the listed SVHC substances in its manufacturing under its control.

IWCS does purchase some components that are manufactured outside of IWCS's own facilities. Such manufacturers are required to provide assurances or test records to prove whether any listed SVHC substances are in the supplied components.

If any listed SVHC substances (above the reportable limits) according to the REACH regulation are determined to be present in the components, IWCS will comply with REACH regulations and will include appropriate safe handling instructions.

A link on the company's website will direct you to a page listing any such substances contained in any IWCS product.

IWCS understands the reason and supports the purpose of REACH and will stay in compliance with this regulation.
