

## Highlights week 3

First IW-SiC newsletter!

IW-SiC is **International Workshop (series) on SiC** to advance technologies. The annual SiC conferences ICSCRM/ECSCRM have been more than 30 years. Rotating in Europe, US and Asia. They are very good for building network and meet people. But they mainly require long-distance travelling and many young researchers can not attend regularly. We have to be able to use online mode and be effective about it. That is our responsibility in these days of climate change. The IW-SiC is structured to create more effective interaction and opportunities. Interaction comes best from small groups, and even better if we meet regularly. The workshop format is perfect for that. In such way the large (1000+ participants) conference format and workshop series format are very complementary.

### Webinar - research leadership

Jan 25 at 10AM (Stockholm). An online webinar via Zoom with some shared insights to young researchers interested in how to have stronger leadership.

[Read more](#)

The IW-SiC is particularly suitable for young researchers. There are special Young researchers sessions. These are great opportunities to disseminate your research, showcase your expertise, and build personal networks with other presenters. The sessions serve to both disseminate the young researchers research area, and show

the skills and professional behaviour of the young individuals themselves. By allowing them to showcase their skills and competence is a way for industry to recruit a promising researcher. A researcher that makes a good presentation and shows ability to discuss and have exchange about ideas is very attractive and can not be seen from reading CV. Direct contact and personal networks are well known ways for career steps. IW-SiC will also have special career days.

Deadline 27 Nov 2024	

## MSCA as strategic way for researcher progress

The MSCA (Marie Skłodowska-Curie Actions) program can be a strategic opportunity and that there will be synergies for researchers who start discussing the MSCA opportunities now.

[Read more](#)

The base of interaction in the IW-SiC format is given by a modified approach of presentation and Q&A. The presentations are not meant for other experts in your topic for detailed dissemination. The presentation time is therefore 10 minutes. That is not too brief and not too long so that presenters are attempted to include too many details. The Q&A is 10 minutes. That is not too brief and not too long. That time structure should be sufficient to create interaction when participants are active.

We also welcome any ideas!

---

## About IW-SiC

### Concept by Dr. Mikael Syväjärvi

The IW-SiC was initiated and formulated by Dr. Mikael Syväjärvi. He has 30 years of experience in SiC crystal growth R&D. He is also entrepreneur, started several companies in SiC and deeptech, made international technology transfer. He is active in transfer of knowledge and research to business in projects and by consultancy.
