

News - week 12

The future is indicated in the Horizon Europe strategic plan 2025-2027 that came a few days ago. For example, in Cluster 4 (Digital, industry and space) it says about the design and development phase of advanced materials, for that there is a need for innovative digital tools and smart data management. New digital tools are needed such as common data spaces, digital twins, industrial virtual worlds, as well as training on these new tools. This also requires new business models to be developed for the deployment of circular technologies and value chains.

It is up to us to propose activities which can contribute. Key areas will be materials manufacturing, digitalization and new business. In the coming week there are open webinars about digitalization, sustainability in supply/value chain and new business models using tokenization and Web3 wallets. In coming weeks there will be updates about training and skill development. Feel free to contact and discuss ideas.

SiC crystal growth and manufacturing workshop

In planning. Interested to present or chair a session in your topic of interest?
