

# OPTION [CFD] STRATEGIES SIMULATOR

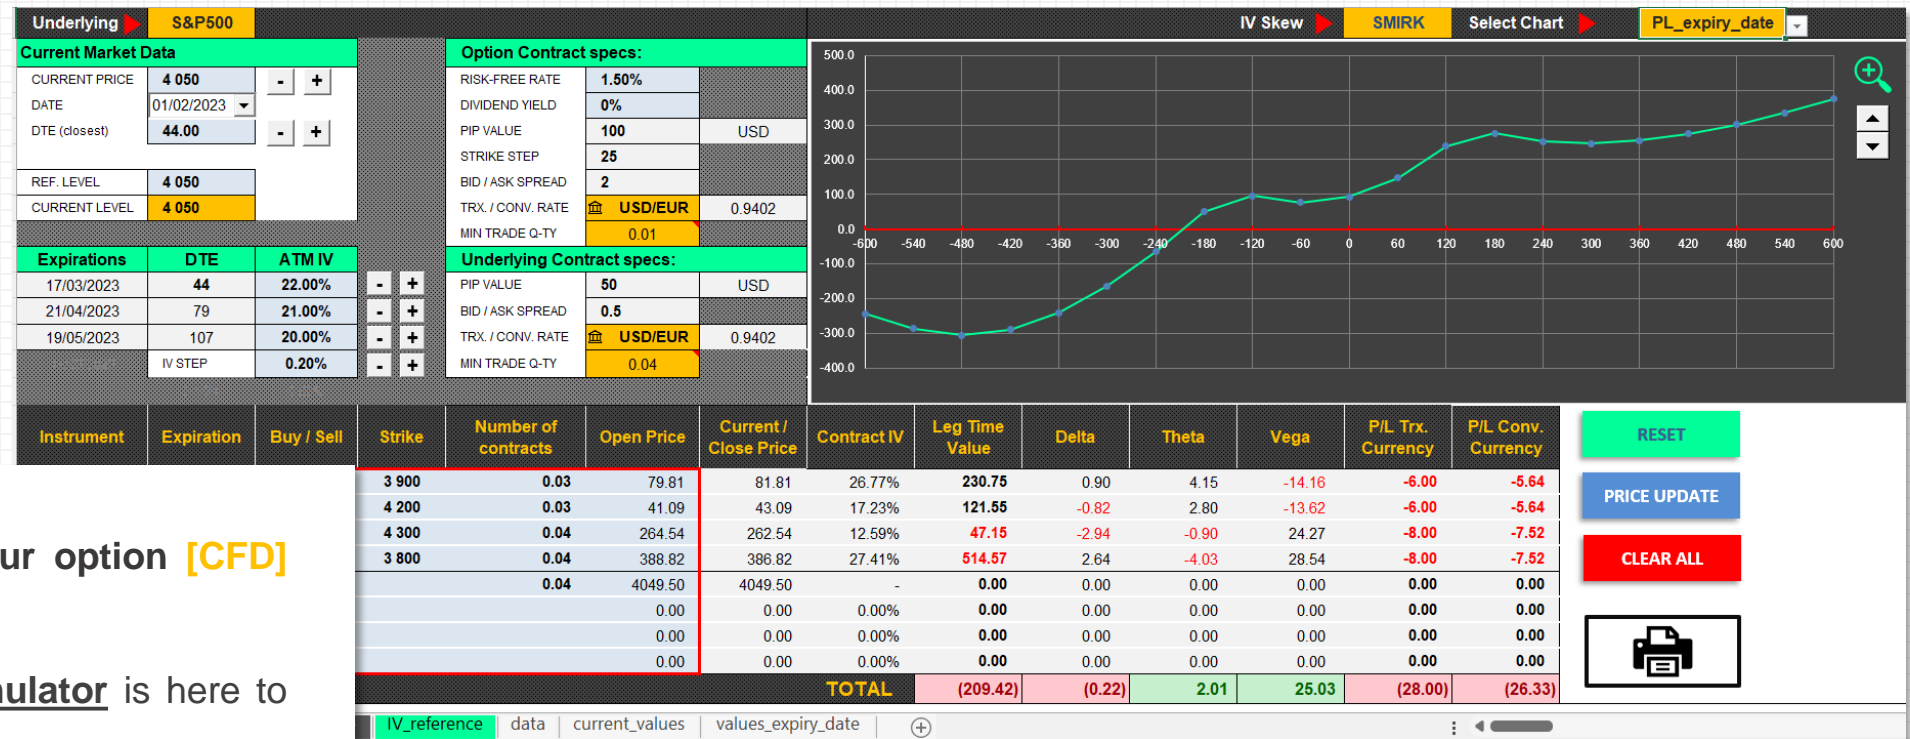

EXCEL-BASED APPLICATION

**ix**QUANT

[www.ixquant.com](http://www.ixquant.com)

# INTRODUCTION

Are you ready to take your option [CFD] trading to the next level?

Our Option Strategies Simulator is here to change your trading experience with its comprehensive Excel-based suite. With this powerful and intuitive option analysis tool, you can quickly build, forward test and accurately predict what will happen under various market conditions.

Stop guessing and start trading smarter today with Option Strategies Simulator!

## Main Features:

- ✓ Make quick and unlimited **forward testing** of your option [CFD] trading strategies
- ✓ Create **multi-leg** and **multi-expiration** setups
- ✓ Combine in one setup instruments traded in **different currencies**
- ✓ Make simulations with **fractional contract sizes**
- ✓ Visualize results with the **Payoff chart** and **Greek** values charts

Option contracts related data  
Underlying instrument data

Contracts specs - entered once  
Market data - regular updates required

### IMPORTANT NOTICE :

For the purpose of an example, the option and underlying instruments contract specifications presented in this table are taken from those of IG Bank Switzerland (CFD broker).  
If you trade with another platform, you will have to adjust this data to the contract specifications of your broker.

### Instruments Table annotations (ungroup to see) :

Instrument	The name of the <b>underlying instrument</b> as it will appear in :
opt_trx	<b>Transaction currency</b> of the option contracts on the select
opt_pip_value_trx	The <b>currency value of one pip</b> of the option contract, expe
strike_step	The <b>minimum distance in points</b> between the two closest st
spread_option	<b>Bid / Ask spread (in number of points) of the option con</b>
min_qty_opt	<b>Minimum tradable quantity</b> of an option contract. For the n

Instruments table

### INSTRUMENTS\_TABLE – Instruments configuration table. Here you can:

- ✓ Configure the specifications of option and underlying contracts
- ✓ Define the list of instruments you work with
- ✓ Update the expiration dates and current IV levels for option contracts
- ✓ Update the current level (price) of underlying instruments
- ✓ Define the instruments transaction currency

**Annotations to FX rates table:**

The exchange rates for the above currency pairs are imported through the Excel **Data => Currencies** function. In case this function is not available in your Excel version, it is also possible to enter the rates manually.

Those exchange rates are used in the "Simulator" tab to make the conversion from the transaction to conversion currencies.

Read more about the use of the currency conversion in the "Getting Started" section.

## DATA – Set of configuration tables for auxiliary data:

- ✓ FX Rates table

Underlying contract specs

## 1 Fill in the contract specs data

To show the process, we took the data for **S&P500** index (as underlying instrument) and its option specs as they are traded on **IG Bank Switzerland** platform. See the contract specs screenshots on the left.

You will have to use the contract specifications of your broker / trading platform.

Additionally, the description of each column of the “**Instruments\_table**” is available in the same tab of the **Excel** file.

It is possible to **Add** or **Delete** the **instruments** (rows) in this table to match your needs.

# GETTING STARTED – 2 SIMULATOR – MAIN COMMANDS

Puts the **current values** in the « **Open Price** » column

Clears **ALL** entered data inside the **red** rectangle

# GETTING STARTED – 3 STEP-BY-STEP SETUP BUILDING

# 1

## Select Underlying Instrument

From the **drop-down menu**, select the underlying instrument you will be building simulation for. In our example, we select **S&P500** index.

Once underlying is selected, the following cells, marked with **yellow dots** on the screenshot just below, will be **automatically filled in** (data will be imported from the **Instruments\_table**):

Underlying	S&P500
Current Marke	S&P500
CURRENT PRICE	Nasdaq
DATE	ASX
DTE (closest)	N225
	HSI
	Crude Oil
	Gold
	Silver
REF. LEVEL	4 050
CURRENT LEVEL	4 050

Underlying	S&P500			
Current Marke	S&P500			
CURRENT PRICE	Nasdaq			
DATE	ASX			
DTE (closest)	N225			
	HSI			
	Crude Oil			
	Gold			
	Silver			
REF. LEVEL	4 050			
CURRENT LEVEL	4 050			
<b>Option Contract specs:</b>				
RISK-FREE RATE	1.50%			
DIVIDEND YIELD	0%			
PIP VALUE	100			
STRIKE STEP	25			
BID / ASK SPREAD	2			
TRX. / CONV. RATE	USD/EUR 0.9402			
MIN TRADE Q-TY	0.01			
<b>Underlying Contract specs:</b>				
PIP VALUE	50			
BID / ASK SPREAD	0.5			
TRX. / CONV. RATE	USD/EUR 0.9402			
MIN TRADE Q-TY	0.04			
<b>Expirations</b>				
	DTE	ATM IV		
17/03/2023	44	22.00%	-	+
21/04/2023	79	21.00%	-	+
19/05/2023	107	20.00%	-	+
	IV STEP	0.20%	-	+

Approximate **current level** of the underlying instrument.

It is imported from the **Instruments\_table**.

We will use this value as a reference to enter **REF. LEVEL – B7 cell**.

**(TRX) Transaction currency – option contracts**

**FX rate TRX to (CONV) Conversion currency**

**Transaction currency – underlying instrument**

**Pre-set expiration dates**

**DTE – Days to expiration**

**MIN tradable quantities**

**FX rate TRX to CONV**

# GETTING STARTED – 3 STEP-BY-STEP SETUP BUILDING

## 2

### Fill in manually the required cells

The next step is to populate manually the cells marked with **green dots**.  
The data in these cells is not automatically imported from the **Instruments\_table**:

Underlying	S&P500
Current Market	S&P500
CURRENT PRICE	Nasdaq
DATE	ASX
DTE (closest)	N225
	HSI
	Crude Oil
	Gold
	Silver
REF. LEVEL	4 050
CURRENT LEVEL	4 050

1

**Select** the simulation date.

2

**REF.LEVEL** – round number, close to **CURRENT LEVEL** value.

It must be **divisible** by the **strike\_step** value from the **Instruments\_table** for a given underlying instrument.

It is used to form the list of available strikes in the drop-down menu.

3

**ATM IV** for each expiry date. Can be either current market volatility or the desired level of volatility for testing purposes.

4

Average **IV increment** between the IVs of two closest strike prices. It is used for IV adjustment and better simulation result.

6

Hit the “Reset” button.

- **REF.LEVEL** value copied into the **CURRENT PRICE**

- **DTE (closest)** cell is set according to the selected date

RESET

5

**Select** the **TRX./CONV.** currency pairs for the options and underlying contracts.

Conversion currency could be, for instance, the currency of your trading account.

The options and underlying contracts of your setup may have different transaction currencies. In order to see the meaningful **overall P&L**, it is more convenient to convert it to the same currency.

Underlying	S&P500			
<b>Current Market Data</b>

# GETTING STARTED – 3 STEP-BY-STEP SETUP BUILDING

# 3

## Build the trading setup – Add legs

The next step is to actually build your trading **SETUP**. It is possible to add up to **8 legs** in one setup. All the combinations of options, underlying instrument, different expiration dates are possible.

**1** Check the box to **activate** the leg

**2** Select the instrument

**3** Select the trade direction

**4** Select or type the strike price

Instrument	Expiration	Buy / Sell	Strike	Number of contracts	Open Price
<input checked="" type="checkbox"/> PUT	7/03/2023	SELL	3 900	0.03	79.81
<input type="checkbox"/> PUT	7/03/2023	SELL	4 200	0.03	41.09
<input type="checkbox"/> CALL	9/05/2023	BUY	4 300	0.04	264.54
<input checked="" type="checkbox"/> CALL	19/05/2023	BUY	3 800	0.04	388.82
<input type="checkbox"/> UNDERLYING		BUY		0.04	4049.50
<input type="checkbox"/> UNDERLYING					0.00
<input type="checkbox"/> UNDERLYING					0.00
<input type="checkbox"/> UNDERLYING					0.00

**5** Type number of contracts

Hit **“Price Update”** button. Thus, the model will update the **“Open Price”** column and you will be able to see the chart representation of your strategy.

**6** Select the IV Skew pattern – Smile or Smirk.

Generally, **Smile** pattern is observed in implied volatility of commodities (Gold, Silver, Crude Oil).

Whereas the **Smirk** pattern can be seen in the implied volatility of major indices and currencies, among the others.

PRICE UPDATE

**7**

## 4

### Strategies Simulation and Chart Analysis

Once the **trading setup** is built, you are ready to **forward test** your strategy and make your analysis to see how the strategy will perform under different market conditions:

- ▶ Analyse different charts – Current chart (on the simulation date), Chart at the closest expiration date, Greek charts.
- ▶ Change underlying instrument level and volatility level to see how this will impact your overall position.
- ▶ Activate or deactivate legs.
- ▶ Make simulations for different volatility levels to find out which setup is the best use under specific market conditions.
- ▶ **REAL positions simulation** – if you have open option positions on your **REAL** trading account, you can add them into the **SIMULATOR** and in the column **Open Price** just type your actual open prices. This will allow you to test different “**what-if**” scenarios OR use the **SIMULATOR** as your **REAL** positions **management and decision making tool**.

# GETTING STARTED – 3 STEP-BY-STEP SETUP BUILDING

## 5

### Additional Information

Few more details you should know to better understand the functioning of the simulator.

**Current Market Data**

CURRENT PRICE	4 050
DATE	01/02/2023
DTE (closest)	44.00
REF. LEVEL	4 050
CURRENT LEVEL	4 050

**Option Contract specs:**

RISK-FREE RATE	1.50%
DIVIDEND YIELD	0%
PIP VALUE	100
STRIKE STEP	25
BID / ASK SPREAD	2
TRX. / CONV. RATE	USD/EUR

**Payoff Chart**

600.0

IV Skew ▶ SMIRK Select Chart ▶ PL\_current

Zero level on horizontal axis **always** corresponds to the **CURRENT PRICE** of the underlying – cell B3.

IF the current price is changed, for instance, with + or – buttons, the chart will shift to the right or to the left.

Payoff chart is constructed using the **CONV** (conversion) currency data – **P&L expressed in conversion currency**.

It is done with the purpose to make the chart representation more meaningful in the cases when the option and underlying contracts are traded in different currencies.

**Leg Time Value – theoretical time value of each leg at their expiration date.**

**Short** option positions have **positive** time value.

**Long** option positions have **negative** time value.

**For indicative information purposes only.**
