

JWL Sodablaster 2

Clean or remove without damaging

JWL Sodablaster 2 is an enhancement of JWL's successful Sodablasting Gun. The nozzle on the Sodablaster 2 is already set for the optimal output and it is possible to change the precision nozzle. A high-performance wide nozzle is available as additional fitting (article no. 145955-000).

JWL Sodablaster 2 is equipped with a practical, refillable container (1,2 L). JWL Sodablasting Gun is suitable for hobby as well as professional use.

JWL Sodablaster 2 uses soda specifically intended for blasting.

Sodablasting is a fast and gentle method of removing paint and corrosion - even from hard to reach places. Sodablasting neither warms up, nor stretches the sheet metal. Sodablasting does not damage glass, rubber or plastic and due to this fact, sodablasting requires a minimal need for shielding. Sodablasting protects the bare metal from rusting right away in contrast to sandblasting.

Sodablasting removes anti-fouling paint from boat without damaging the hull. Sodablasting removes varnish and doesn't damage seals (rubber or plastic).

Sodablasting cleans paint from glass surfaces or window frames without damaging the glass or rubber seals. Sodablasting removes varnish from wooden furniture. Sodablasting is gentle and environmentally friendly.

Always use P2 respiratory protection, hearing protection and eye- and facemask when blasting with soda. Blasting soda is pure NaHCO₃, i.e. normal baking soda. It is not dangerous, but may be harmful if inhaled as dust.

NB! requires a compressor with a capacity of at least 2.5 HP / 180 l/min.

Precision nozzle
145950-000
