

SAMPLE PREPARATION WITH ULTRAWAVE IMPROVES STANDARD DEVIATION WHEN DETERMINING LOW CONCENTRATION OF CA IN STEEL WITH ICP-OES

Ulrica Stenlund

OVERVIEW

- Presentation of Analytical Chemistry Laboratory
 - Sandvik SMT in Sandviken
- Introduction
 - Demand, Objective and Challenge
- Experimental
- Results and Discussion
- Summary

SANDVIK MATERIAL TECHNOLOGY SANDVIKEN

Developing advanced stainless steels and special alloys which can make industrial processes more efficient, profitable and safer.
Application areas such as Oil and Gas, Aerospace and Nuclear power.

INTRODUCTION

DEMAND, OBJECTIVE AND CHALLENGE

OBJECTIVE

chilicmartin.info

Sample Preparation
Dissolved in a solution

Determination of Ca in steel

Measurement by ICP-OES

Specification for the material
Ca 0.0020-0.0060 %
Srw 0.0002 %

Demand

PRESENT ROUTINE METHOD

Sample preparation,
in acids on hot plate

Control Chart
shows srw 0.00045 %

How to improve?

CHALLENGE

UltraWAVE

Sample preparation,
Microwave digestion
technique.

Better precision for the
control sample??

EXPERIMENTAL

EXPERIMENTAL

Ref material
JK27A
SDN69

1

Routine, hot plate

0.5 g sample dissolved in 6 mL HCl
3 mL HNO₃.
Diluted to 100 mL with UPW in a plastic flask.

15 mL tube for injection to instrument

2

Modified, hot plate

0.25 g sample dissolved in 6 mL HCl
3 mL HNO₃.
Diluted to 50 mL with UPW in 50 mL PP-tube.

3

UltraWAVE

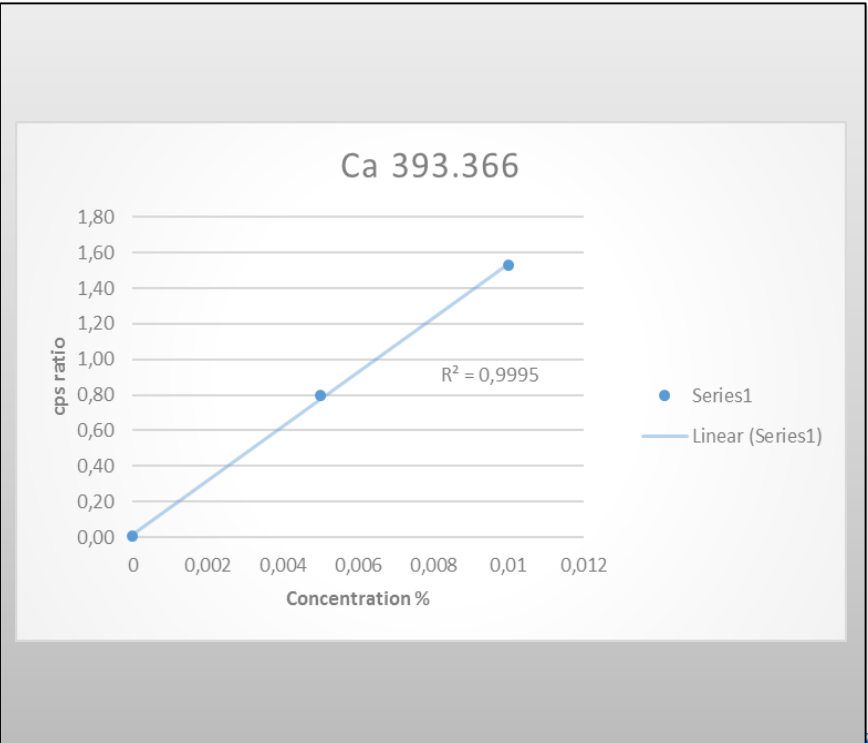

PREPARATION TIME

The UltraWAVE preparation takes longer time but can be unattended, that's positive!

ICP-OES ANALYSIS

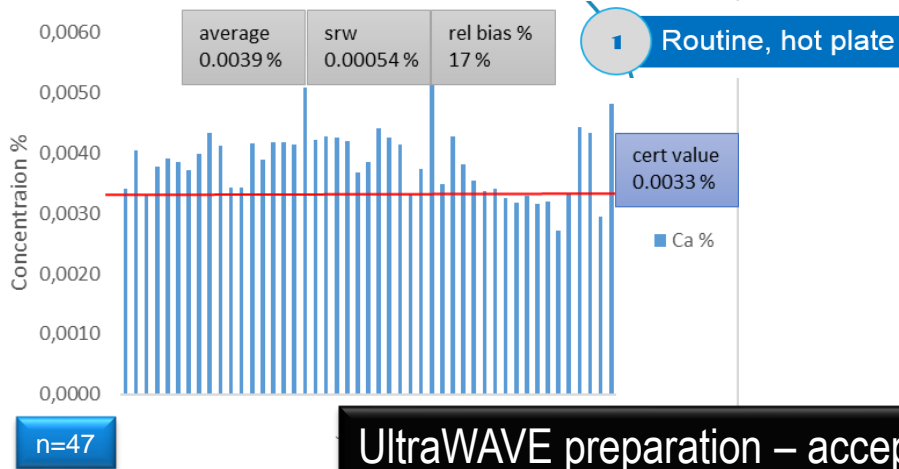

- [Calibration](#)
 - Fe matrix spiked with certified standard solution of Ca with high purity.
 - New calibration for every run.
 - 0-0.01 % Ca
- [Spectral line](#)
 - Ca 393.366
- [Internal standard](#)
 - Sc 361.384
- [ICP-OES instrument](#)
 - Spectro Arcos

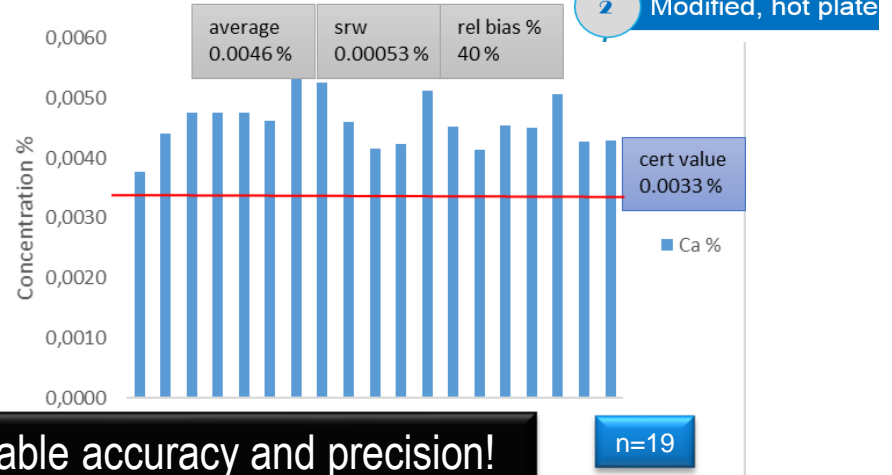

RESULTS AND DISCUSSION

Hot plate prepared samples, routine

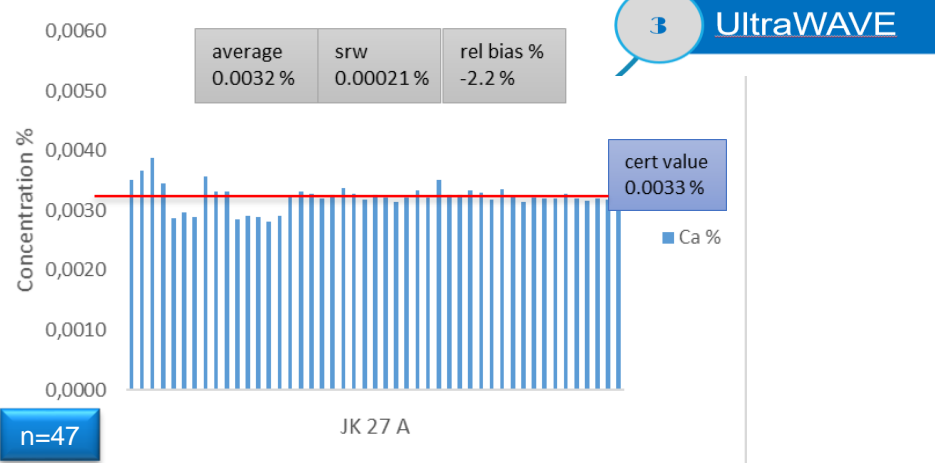

Hot plate prepared samples

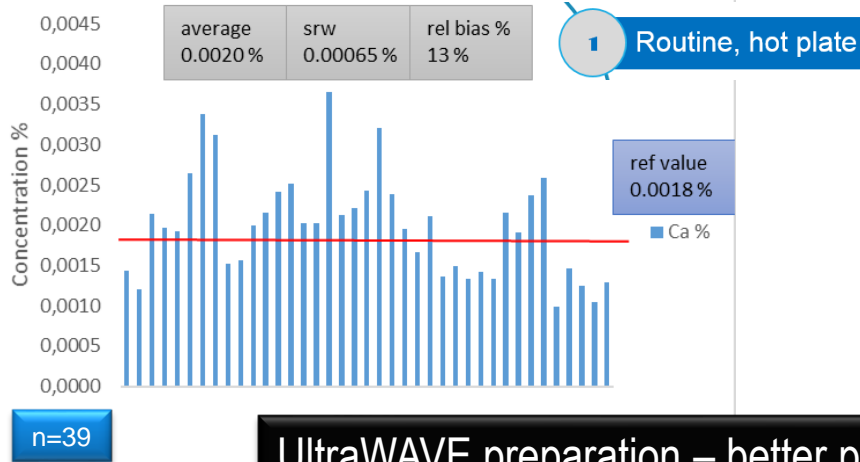

UltraWAVE preparation – acceptable accuracy and precision!

RESULTS

UltraWAVE prepared samples

Hot plate prepared samples, routine

Hot plate prepared samples

UltraWAVE preparation – better precision but what about the bias?!

RESULTS

UltraWAVE prepared samples

SUMMARY

SUMMARY

With UltraWAVE digestion;

Significant improved precision for JK 27A and SDN69.

Significant improved accuracy for JK 27A.

Reduced risk of undissolved sample.

Improved safety with less sample handling.

Longer sample preparation time but can be left unattended.

Sample preparation with UltraWAVE improves standard deviation when determining low concentration of Ca in steel by ICP-OES

Next-Interesting... "ColdBlock" IR-digestion?!

Anyone who has any experience?

Questions?

The End

Thank for your attention 😊
