THE Carbon Capture X-Pedition: Prepping
for Transformation

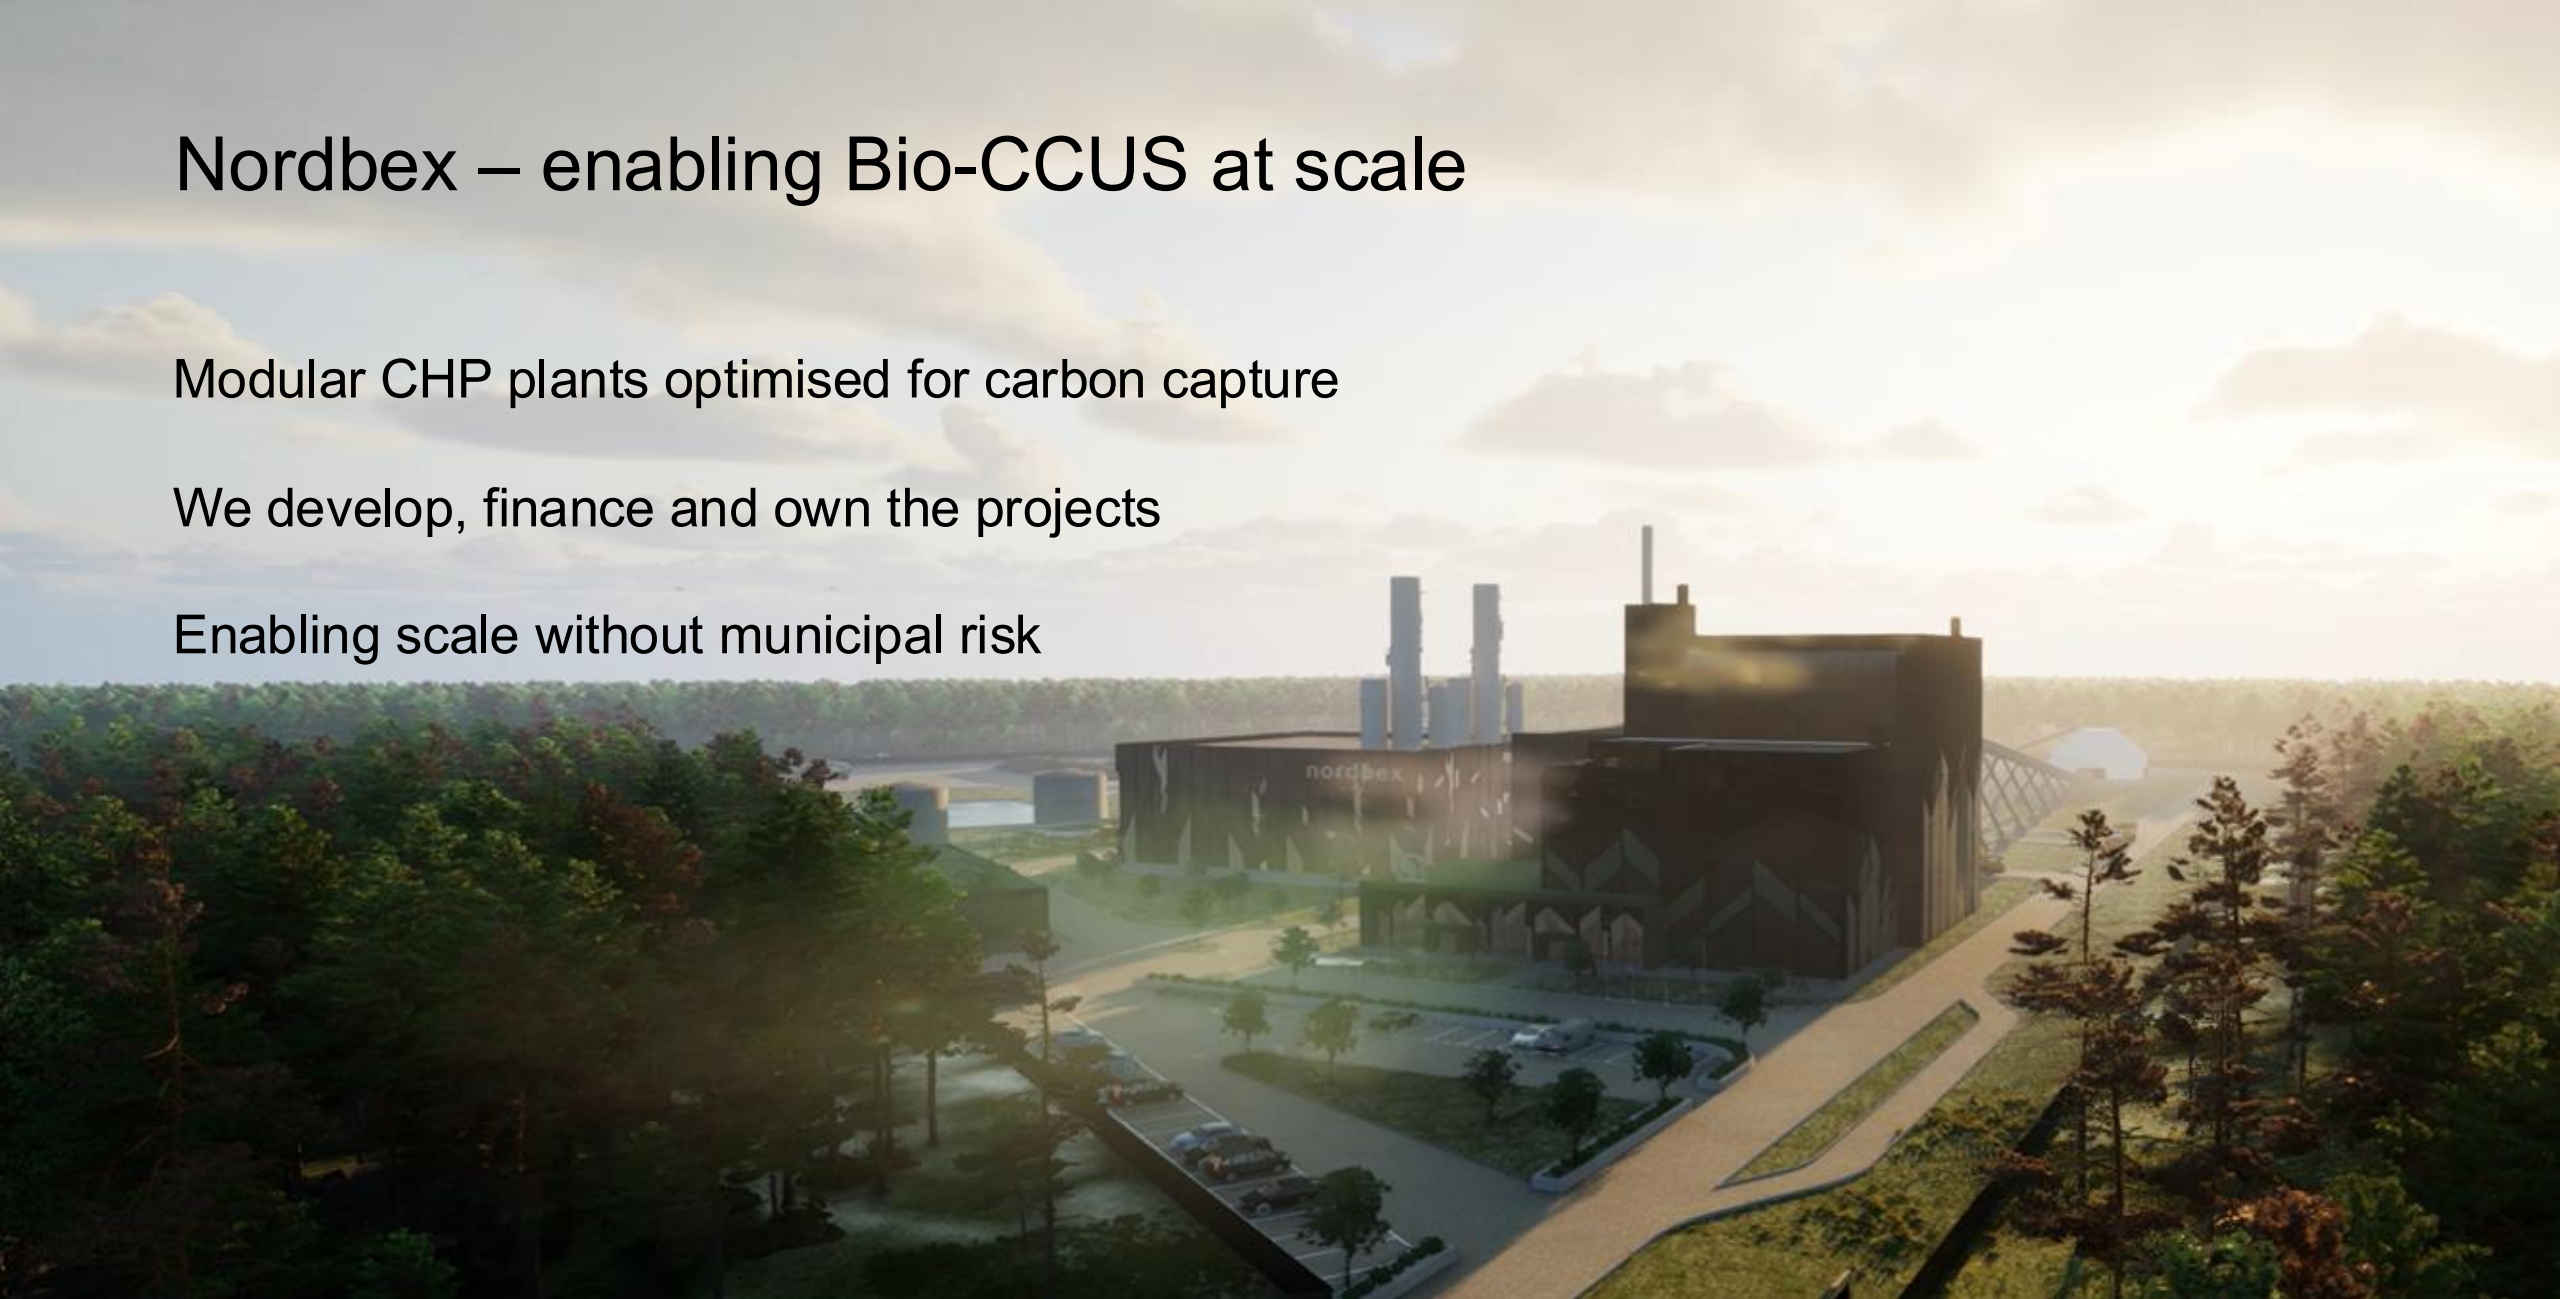

March 2026

Nordbex – enabling Bio-CCUS at scale

Modular CHP plants optimised for carbon capture

We develop, finance and own the projects

Enabling scale without municipal risk

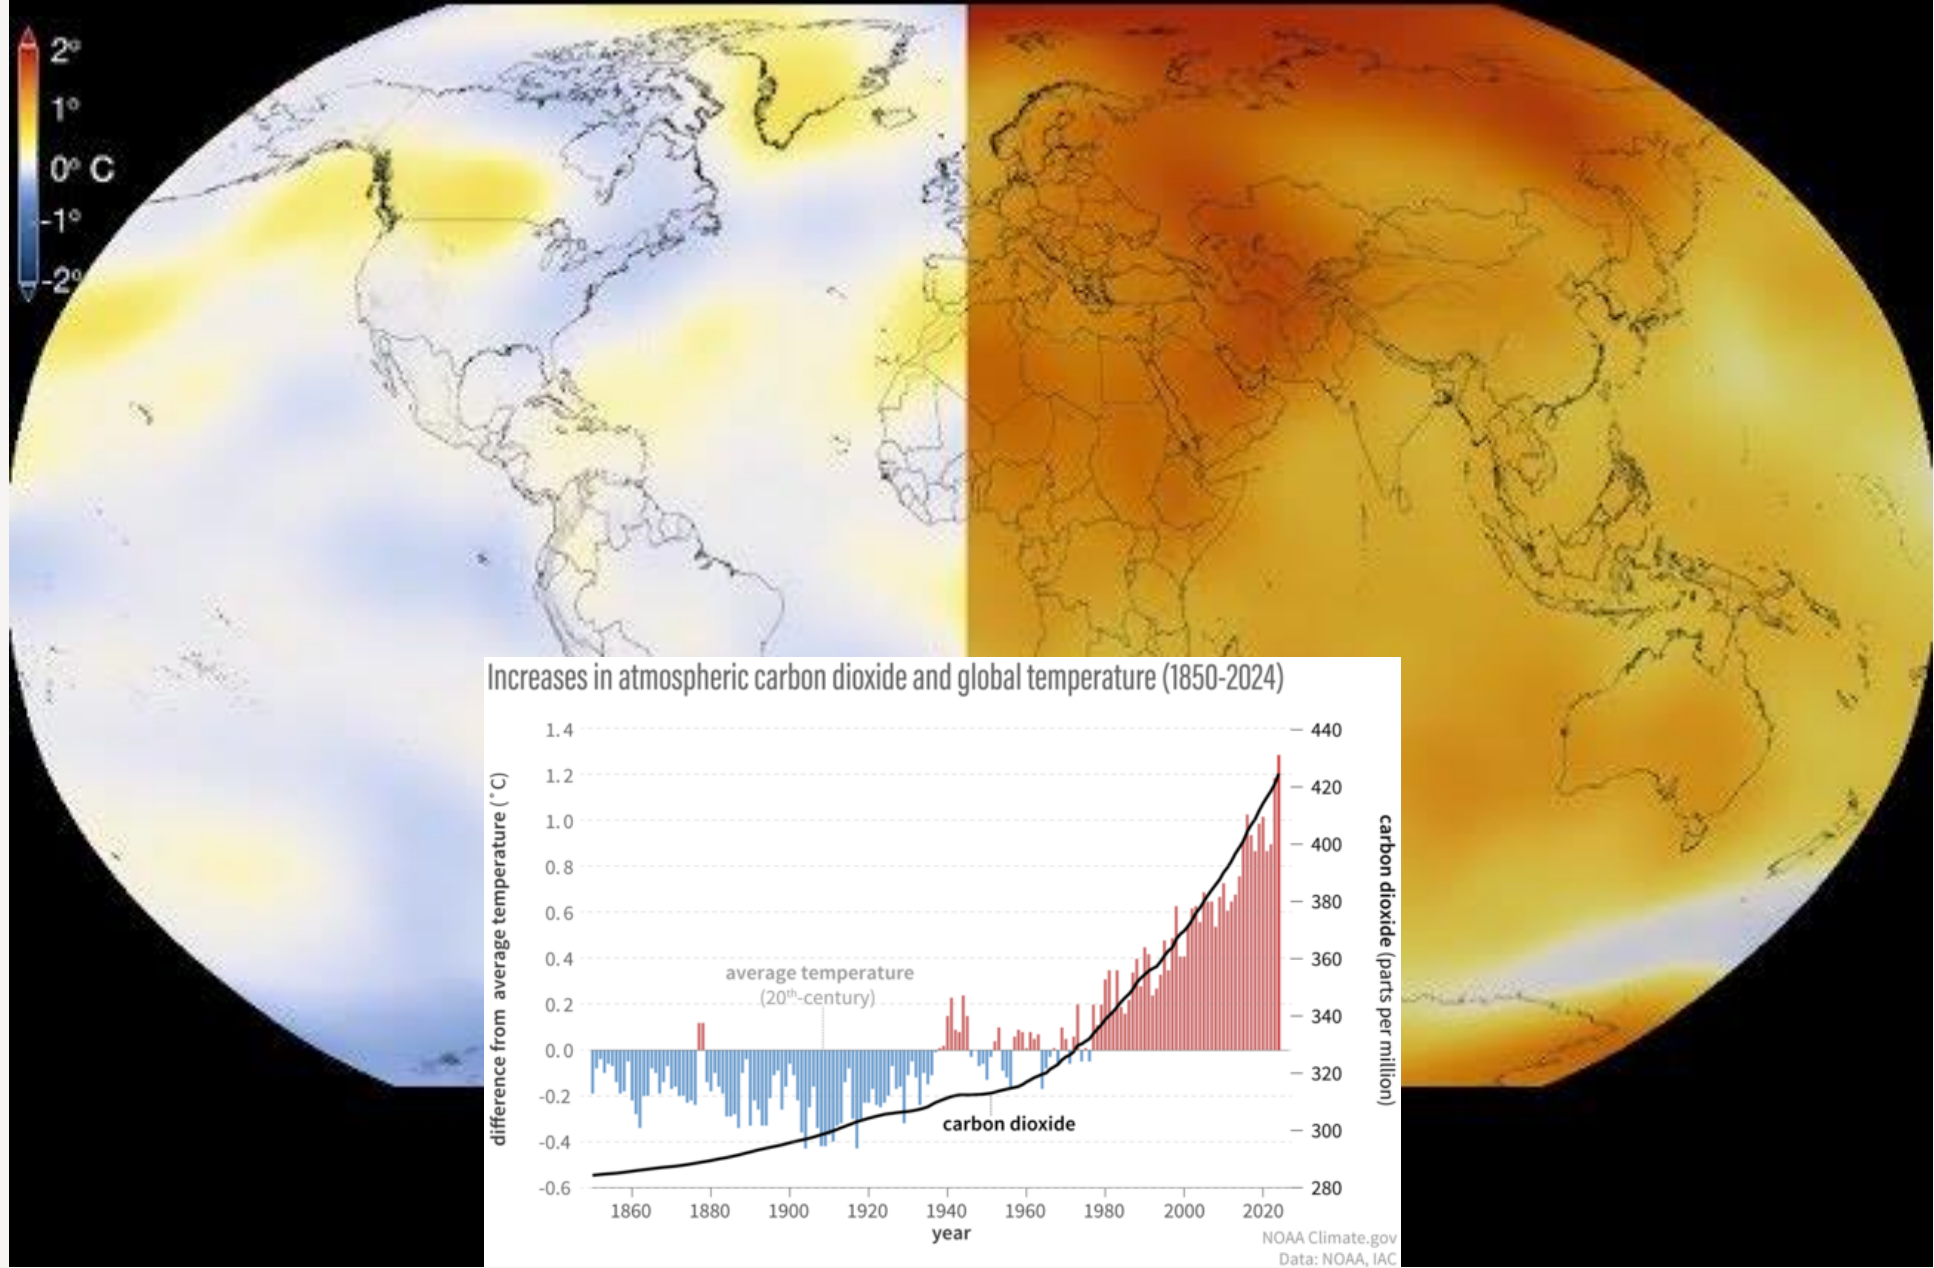

“Code red for humanity.” — António Guterres (UN Secretary-General)

Fundamentals has not changed

Now is the ideal time for positioning

But change the strategy

Why Nordbex

Nordbex key driving forces

Increased National Resilience

Biogenic CO₂ for eFuels like eSAF & eMethanol

“Reliance on fossil fuels makes Europe vulnerable to external pressures and costly imports, while a shift to renewables would enhance security, lower costs and improve resilience.” – *EUISS 2025*

Unprecedented scale of electrification

Provide Valuable baseload power to the grid

“Svenskt Näringsliv estimates that electricity demand will increase by at least 60% by 2045 compared to today’s level.” – *Svenskt näringsliv 2025*

Escalating climate change

Remove atmospheric CO₂ through CDR

“Climate change is a threat to human well-being and planetary health. The choices and actions implemented in this decade will have impacts now and for thousands of years.” – *IPCC 2025*

“Therefore, we urge investors and developers to secure the supply of biogenic CO₂ ... while the opportunity to do so exists.” – *Maersk Zero Carbon 2025*

Bio-CCUS is slowing down – when we need it most

What is happening right now

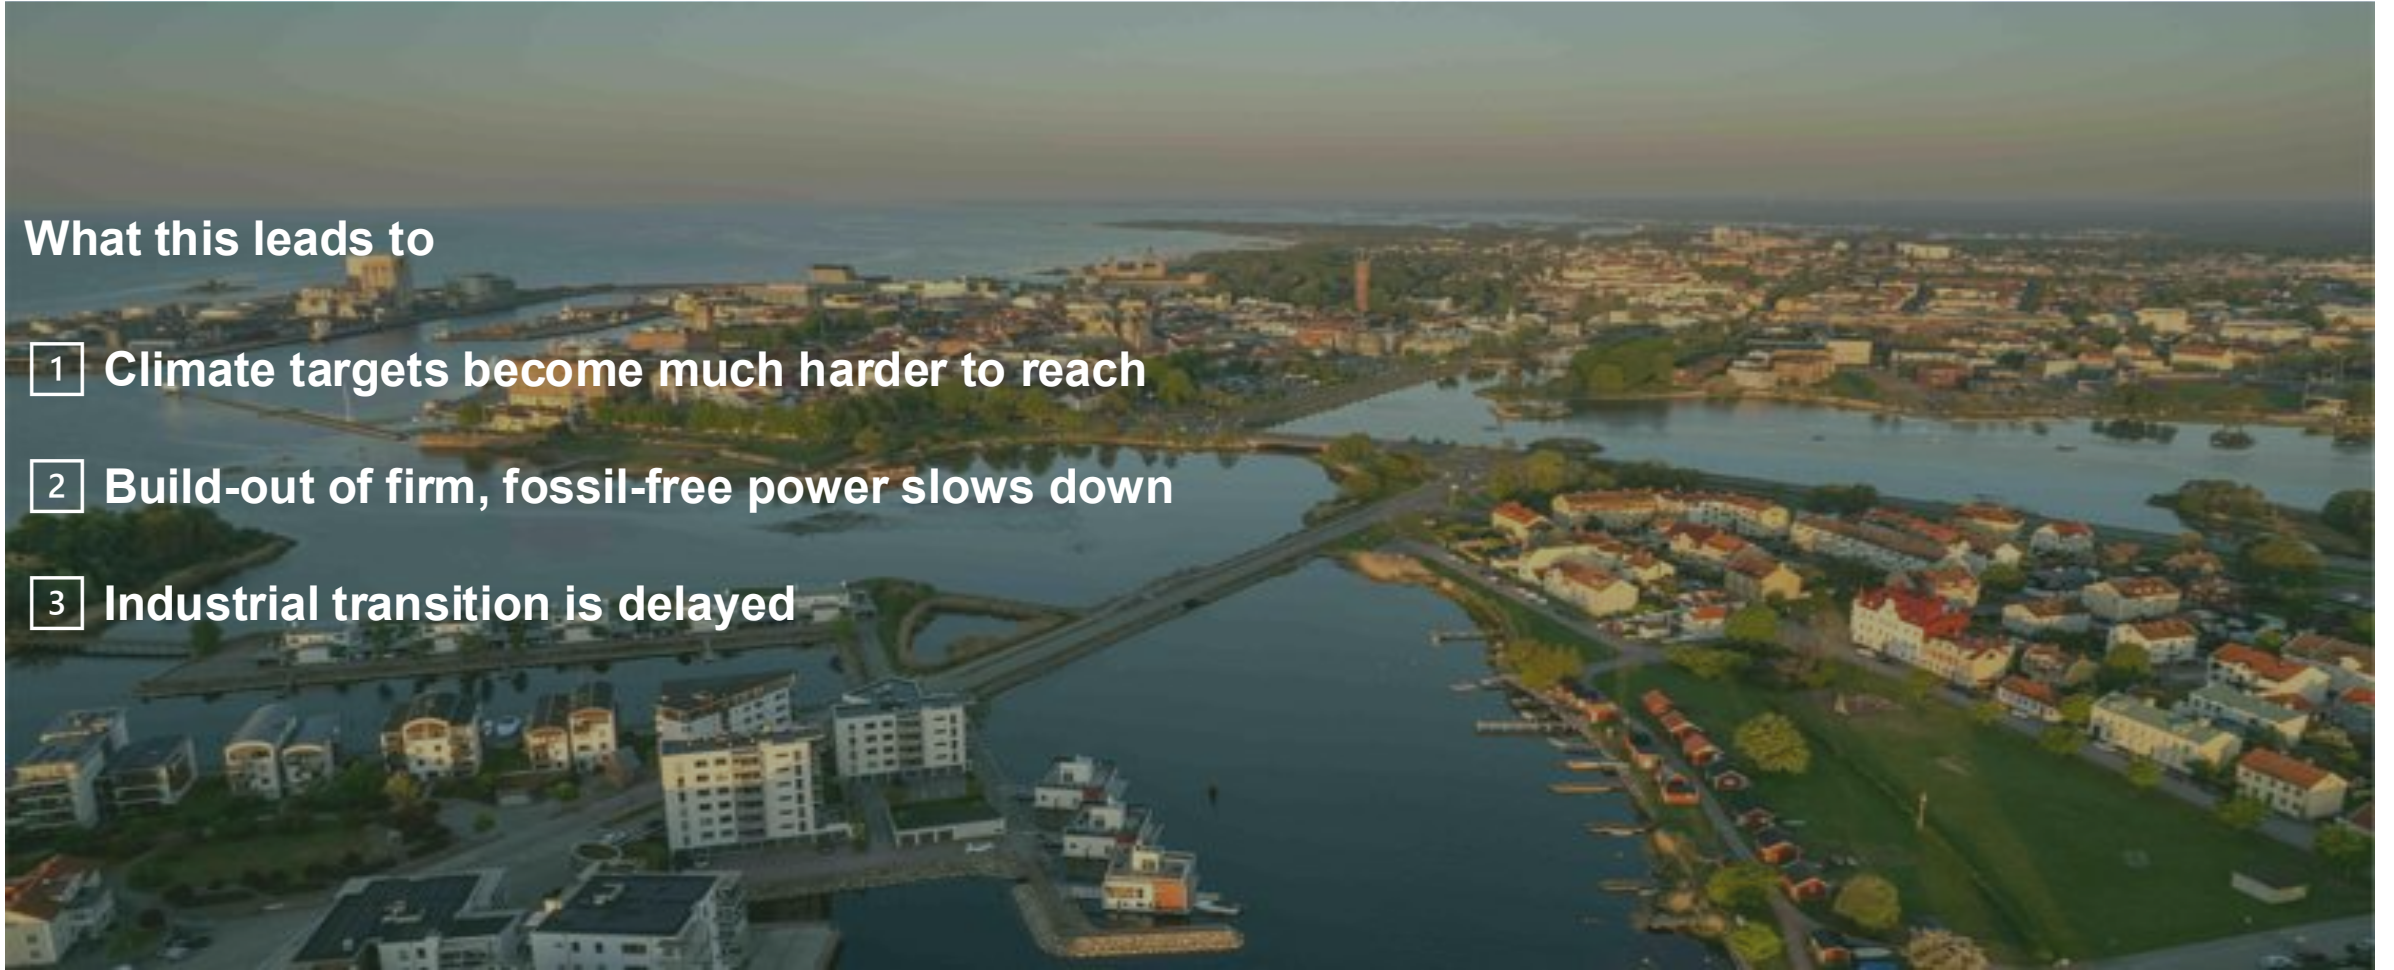

- 1 Projects are being paused or cancelled
- 2 Municipalities cannot take the financial risk
- 3 Time, resources and expertise are limited

We risk falling behind on what matters most

What this leads to

- 1 Climate targets become much harder to reach**
- 2 Build-out of firm, fossil-free power slows down**
- 3 Industrial transition is delayed**

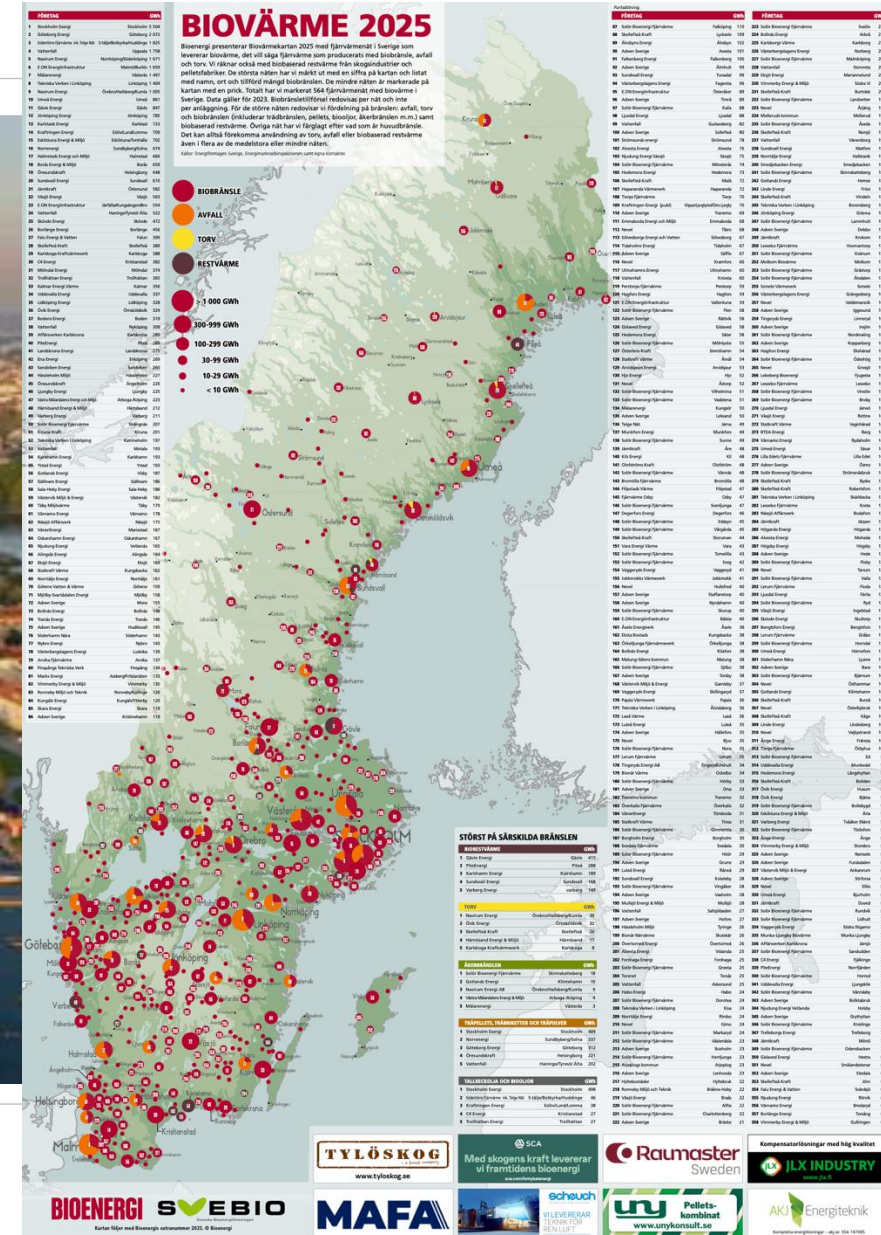

A new way to make Bio-CCUS happen

CHP units in Sweden under Nordbex radar

Where Nordbex comes in

- 1 We develop and drive projects end-to-end
- 2 We unlock private capital – without municipal risk
- 3 We enable scalable Bio-CCUS deployment

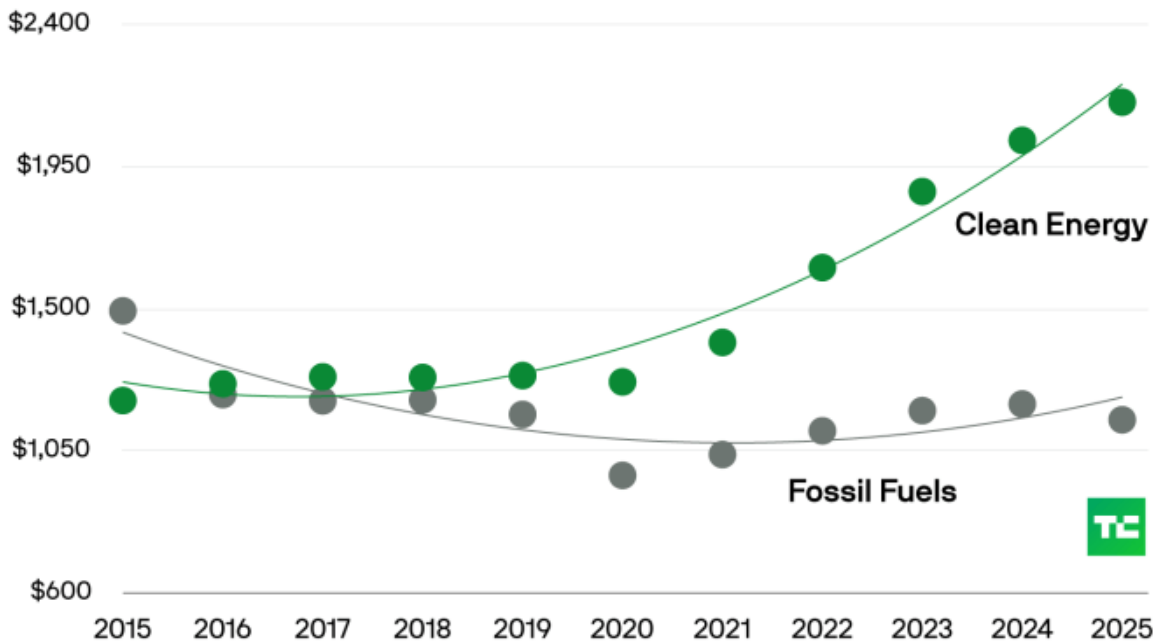

The financial market understands...

“Be fearful when others are greedy, and greedy when others are fearful.”

“Tough times never last, but tough people do.”

Global Investment in Energy (in USD billions)
