ALUMINIUM

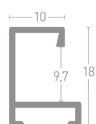

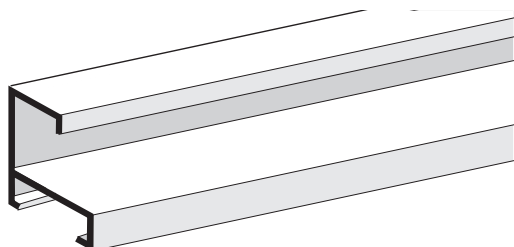

SUR MESURE

LES FINITIONS ANODISÉES

L'anodisation est un traitement de surface qui permet de protéger ou de décorer une pièce en aluminium par oxydation anodique (couche électriquement isolante de 5 à 50 micromètres). Ce procédé permet à l'aluminium d'être plus résistant à l'usure, à la corrosion et à la chaleur.

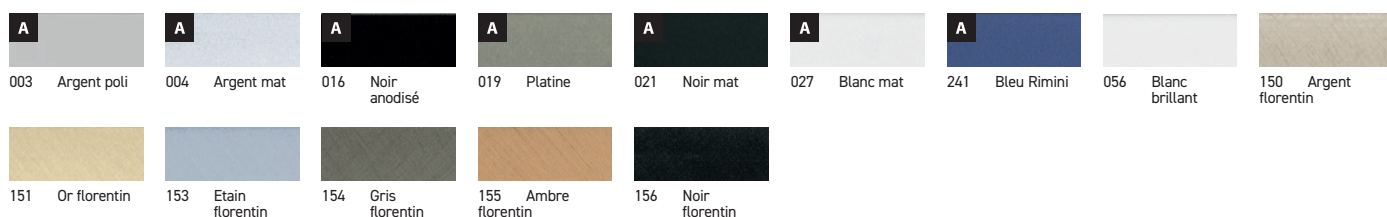

Une finition anodisée donne tout son éclat à l'aluminium, révèle la texture de ce matériau naturel, et apporte une esthétique brute et industrielle. **A**
