

CARE LABELS

Superfine, the best quality!

Highlights • highest quality • for every textile • easy to use

Care labels are everywhere. Whatever the kind of textile, from lingerie and sweaters, to towels: there is always a care label attached. Thermopatch has several care labels in its range; in the best quality of course!

Care label 1 - Nylon taffeta

A strong and flexible care label that can be printed on two sides. Using the modern HIQ-MACH 4.3 printer from Thermopatch, washing instructions and other information are printed easily, and above all sharply on the label, in 300 dpi.

Care label 2 - Polyester satin taffeta

The most flexible and soft care label in our range designed for the more luxurious textiles. Thanks to the so-called (hot) slit-edge, the tendency to fray associated with this type of care label is eliminated. This polyester-satin version can be printed on one side using the HIQ-MACH 4.3 printer.

Care label 3 - Extra strong taffeta

This heavier type of care label is especially suitable for work clothing and other textiles where industrial washing is required. Think of overalls, curtains and even horse blankets! This type of care label also offers a solution for dry cleaners. After frequent washing, a care label type 3 retains its high quality print. A type 3 care label can be printed on one side by using the combination of a Thermopatch HIQ printer and a G7 ink ribbon.

Care labels are available in white in 30, 40 and 50 millimetres width on a roll of 100 metres, (with a core of 50 mm). Other widths and / or colours are possible depending on the volume and on request.
