

# HS-21-SQR

A versatile machine

Highlights • Double lower platens • Graphical display • High performance heater • Energy saving mode • Compact and lightweight

The HS-21-SQR offers you the latest in heat seal technology.

### Speed

This lightweight, ergonomic design incorporates two lower sealing platens which effectively almost doubles its output. Using the most up-to-date heating techniques the press is ready for operation within a few minutes.

The HS-21-SQR is manually operated and thus no compressed air is required. In the energy saving mode the HS-21-SQR consumes less energy.

### Full digital control

The graphical display shows clearly the current status of the press, including temperature, sealing time and energy saving mode. The energy saving mode saves significantly on power consumption.

All these characteristics combine to make the HS-21-SQR heat seal press ideal for small and medium requirements or where a portable solution is required.
