

SUBLIFIX

The reliable heavyweight

Highlights • Intense colours • High resolution imaging • Dye blocking properties • Minimal order 25 pieces

What is Sublifix?

Sublifix textile transfers are especially developed for textiles that have been dyed or decorated by using sublimation techniques.

Sublifix offers a solution in those cases where discoloration appears due to dye migration into direct imprint or transfers.

With our Sublifix transfers sportswear and softshell apparel can be marked without problems.

Special properties

Sublifix transfers can show detailed artwork. The quality of print is exceptional and the colour intensity is of a high quality.

This renders possibilities for almost any combination of colour and size.

Garments with Sublifix can be washed in a domestic washing process at max. 40°C.

Heat sealing

In order to obtain an optimal adhesion, our Sublifix transfers require a sealing temperature of 145-160 °C for 15 seconds with an appropriate heat seal machine.

Thermopatch offers a wide range of heat seal machines which are deliverable from stock.

Colours

Sublifix is available in almost any Pantone colour (PMS, Pantone Matching System®).

Also colours with high visibility properties are available in orange, green, red, pink and yellow.
