

## NL-28

Let it slide...

Highlights • Adjustable lower platen • Standard Nomex® cover • Quick-release lower platen

### NL-28 Heat seal press

The NL-28 is a manual heat-seal press with large platens (40 x 50 cm). This press is perfect for applying transfers and emblems on to T-shirts, polo shirts, jackets and more. In addition, this model has an extra advantage: the lower platen is easily adjustable. This enables maximum freedom and user-friendliness when positioning textiles.

### Usage

The press time and temperature are easily programmable via the graphic display. The memory can store three different programs. Under the plate is a sturdy handgrip, which allows you to easily bring the press platen towards you. It's now easier than ever to apply transfers or emblems to flat objects or other textiles! After pre-heating, and after every press cycle, the press will open automatically.

### Handy accessories

A diverse range of optional accessories is available for the NL-28. This includes press platens and lower platens in many different dimensions.
