

NL-35

Get impressed...

Highlights • High performance • 5 programmable settings • Ease of operation

NL-35 heat seal press

The NL-35 is an air operated (pneumatic) heat seal press suitable for every heat seal job. Once the press opens you can swing it with ease aside.

Electronics

The electronics are developed to make it very easy to set the required parameters like sealing time and temperature. The electronics can store five pre-defined settings so that changing for example from Flextrans to Truflex transfers is just a click.

The electronics also offer a counter so that you can see what has been processed per batch. The counter can be reset at any time. The machine opens automatically and swings away after the sealing cycle is completed (when selected).

The heating element gives a good spread all over the sealing surface without any "cold spots".

AIR OPERATED LARGE PLATEN (40 X 50 CM) HEAT SEAL PRESS

Accessories

Set of lower platens

For this machine a set of 4 lower platens is available to give you full flexibility on the job you need to process.

12 x 8 cm	15 x 15 cm
12 x 42 cm	25 x 30 cm

The platens can be exchanged in an instance without any tools required.

Table

A table can be ordered as an option.

Laser pointer

For easy positioning a laser pointer is available as an option.
