Tegnestuen PLOT

Tegnestuen ~~PLOT~~ **BIG**

Amager Bakke (2018)
Arkitekter: BIG
Landskab: SLA

“We work a lot with the notion of hedonistic sustainability. For a long time, sustainability has been about doing less instead of doing more. It’s been about using less energy, not driving your big vehicle, but restraining yourself to live the life you want to live”

[BIG](#)’s aim is to see these constraints as opportunities for invention. By looking at sustainability through those eyes, you should ask yourself whether it can *“be done in a way which actually makes the world a more fun place to live?”*

“Instead of having the ten commandments of what not to do, turn it into a world where you say: ‘let’s design a world that, if you like to drive your car, the more you drive your car, the more sustainable the world becomes’”. The ultimate experience would be “to go on an airplane that’s more fun, much faster and does not produce CO2”. It's an idea of a world that becomes sustainable through design.
