

What sclr has taught us: The highlights

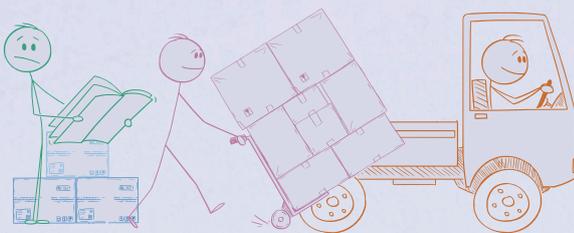

Sclr can and must be tailored to each crisis. However, some of the benefits of working with sclr include:

- By allowing multiple local initiatives that build on local knowledge, capacities, and solutions, sclr can increase the efficacy and responsiveness of overall humanitarian programming;

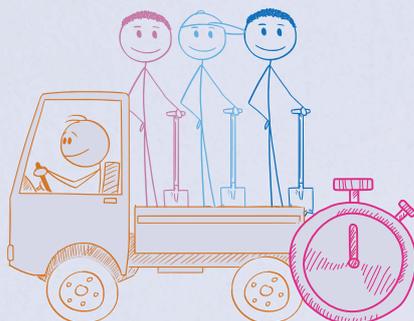

- Affected individuals and groups experience an increased sense of ownership, that is dignifying. Accountability is strengthened, and encourages additional voluntary contributions and spontaneous initiatives;

- Sclr contributes significantly to psychosocial recovery providing a sense of purpose, self-worth and well-being in ways externally-led interventions rarely achieve;

- The sclr approach is indeed nexus in practice, bridging and overcoming the divides and sectors upheld by most mainstream aid;

- Sclr has the ability to increase social cohesion and resilience as well as nurture positive shifts in local power dynamics, for instance around gender;

- Sclr initiatives can be done faster, cheaper, and in some cases, with greater coverage and reach – including in areas with limited outside humanitarian access.
