- ✓ All EX Safety switches used for all functions
- ✓ 220v input via EX plug arrangement
- ✓ Door locked until all movement stops
- ✓ Shaking cycle stops if can becomes loose
- ✓ Machine will not run if no can is present or if can has not been properly clamped
- ✓ Precision engineered solid frames and enclosed cabinet powder coated

Operation

Operation is easy, load the can onto platform, release and lower the clamp plate onto the can. Move the locking lever to the lock position and close the door. Select time and press the start button. Door will automatically lock and shaking will start. When cycle is finished and machine has settled the door lock will release and you can then release locking handle slide upwards and half lock and remove can.

The Maximix Flameproof shaker has a power on switch on the panel and a light illuminates to let you know machine is ready to work.
