The results of unsustainable product design are evident worldwide. Products contribute to global sustainability problems such as climate change, landfill waste and inhumane work environments during manufacturing. There is a need for systems innovators who can create leap frog solutions, manage a whole innovation process for sustainability and who have a strategic approach. These are some of the challenges that graduates of the master's programme in **Sustainable Product-Service Systems Innovation** will be prepared to meet.

As a participant, you will gain:

- Unique competence in developing products and services for a sustainable society
- Experiential learning from a university community at the leading edge of research and industry collaboration
- A concrete planning and decision-making framework for addressing the greatest challenge for human civilisation
- Excellent job opportunities in organisations of all sizes, across all sectors
- Access to a diverse and supportive network of sustainability alumni from BTH

At a glance:

- **Degree:** Master of Science (MSc, 2 year)
- **Credits:** 120 ECTS credits
- **Duration:** 2 years of full time study (Sept-June yearly)
- **Prerequisites:** Bachelor's degree in engineering, industrial economy, industrial design, or equivalent. Proficiency in English.
- **Language:** English
