## **Nor-Guard® OV11 in broiler feed improves the performance**

**Nor-Guard® OV11** is a very cheap and efficient natural additive, which consists of a combination of selected extracts from grapes (*Vitis vinifera*) and olives (*Olea europaea*).

A recently finished trial with broilers at a university's trial farm showed that the inclusion of Nor-Guard OV11® in broiler feed for 42 days improved the daily live weight gain by 5% and the FCR by 6% compared to the control group. Already after 10 days of inclusion, the broilers receiving **Nor-Guard® OV11** had a higher 12% higher daily live weight gain and a 13% more efficient FCR compared to the control group.

The results confirm that the inclusion of as little as 15 ppm Nor-Guard® OV11 in broiler feed has positive effects on the production parameters ADG and FCR in broilers.

**Nor-Guard® OV11** is developed as a highly concentrated powder appropriate for inclusion in both dry and wet feeds. Furthermore, the product is available in various premixes and complementary feeds. The recommended inclusion rate for broilers is 15 ppm.

Please contact Nor-Feed A/S to receive more information on **Nor-Guard® OV11**, and for information about local availability of the products.
