

Soluble products

- Soluble products for administration via animals' drinking water –

Nor-Add, Nor-Feed and its sister company Feed-Add, Dumas have developed a range of soluble products with different functions, which can be used in the animals' drinking water. These are listed in the table below.

Products	Function	Target species
Nor-Guard OV11J (Nor-Add, Nor-Feed A/S)	Performance enhancer with high content of antioxidants for all animal species	Pigs Poultry
Nor-Guard ORVJ (Nor-Add, Nor-Feed A/S)	Vitamin E replacer based on natural polyphenols for all animal species High content of natural antioxidants Antibacterial effects	Pigs Poultry
Du-Drink (Feed-Add, Dumas)	Increase the water intake leading to a higher feed intake and a reduced level of weaning diarrhoea in newly-piglets	Piglets
<ul style="list-style-type: none"> - Du-Drink LM - Du-Drink M 	<ul style="list-style-type: none"> - Contains natural antioxidants and a natural sweetener - Contains natural and mineral antioxidants and a sweetener 	

The products are formulated, so they all are easy to use. It is recommended to make a stock solution by mixing 150g product into 10 litres of water and dispense it at 1% via for example a Dosatron or a Dosmatic, so the final concentration is equal to 0.15 g/L of water.

The advantages of using soluble products compared to conventional products mixed in the feed are:

- They give the animal producers more flexibility,
- They can be administered immediately, when needed, for example in stressful situations,
- They can be removed immediately, when required,
- They can be used in combination with different feed-types.
