Nor-Guard® OV11 has significant, positive effects on piglets' production parameters

A meta-analysis of 14 piglet trials show that the inclusion of **Nor-Guard OV11 Concentrate** in piglet feeds during the first 21 days after weaning improves the average daily gain (ADG) ($P < 0.05$) and the feed conversion rate (FCR) in the trial groups significantly ($P < 0.05$). On average, the ADG and the FCR are improved by 10 % and 11 %, respectively, compared to the control.

The results confirm that the inclusion of as little as 15 ppm **Nor-Guard OV11 Concentrate** has repeatable positive effects on the production parameters, ADG and FCR, when included in feeds for piglets.

Nor-Guard OV11 Concentrate is a highly concentrated powder, which is water soluble, and thus appropriate for inclusion in dry and wet feeds as well as for inclusion drinking water. Furthermore, the product is available in various premixes. The recommended inclusion rate for piglets is 15 ppm.

Please contact Nor-Feed A/S (office@norfeed.dk) to receive more information on **Nor-Guard OV11 Concentrate**, and for information about local availability of the products.
