## **Complementary solution to Boehringer's Enterisol® Ileitis vaccine**

Boehringer's Enterisol® Ileitis vaccine, which is very effective in controlling Lawsonia intracellularis attacks, requires an antibiotics free window of minimum 6 days around vaccination.

Nor-Group offers three natural additives that provide alternatives to antibiotics use in pig production:

- **Alternativ Z:** Two-step solution rich in natural **antibacterials and antioxidants**, enabling it to strengthen the immune system and improve meat quality. Positively impacts **feed conversion**, and binds ammonia, contributing to an improved housing environment.
- **Quiponin SAOX:** Combination product that is rich in natural **antioxidants**, enabling it to strengthen the immune system and improve meat quality. Positively impacts **feed conversion**, and binds ammonia, contributing to an improved housing environment.
- **Nor-Guard OV11: Potent antioxidant**, enabling it to strengthen the immune system and improve meat quality. Very **cost-efficient**.
