

*Long-acting and gentle surface disinfection.
Effective against both viruses and bacteria, including corona virus.*

PRODUCT DESCRIPTION

For the best possible protection against known and unknown infectious pathogens, surface disinfection must be proven effective against many different viruses and bacteria. Nevertheless, most products on the market have a limited effect on viruses.

In contrast, the long-acting Virusafe provides antiseptic protection on surfaces which reduces the risk of re-contamination of viruses, bacteria and fungi up to 24 hours after application. Since water and oxygen are the only residual products, Virusafe is gentle on both surfaces and for the environment.

1. **Active for up to 24 hours**
 - Creates a protective surface that is active for up to 24h after application.

2. **Kills viruses and bacteria**
 - Documented antiseptic effect. Inhibits growth of new viruses and bacteria.

3. **Non flammable**
 - Uniquely stabilized hydrogen peroxide. Forms water as the only residual product.

PRODUCT CHARACTERISTICS

- Effective disinfection for surfaces
- Long-acting antiseptic effect after application, which reduces new growth of viruses and bacteria.
- Documented effect against viruses such as coronavirus, calicivirus (vomit-ing-disease), influenza virus, ebola, etc.
- Non flammable
