Room size* in M ²	Room size* in M ³ (Max)	Treatment time** (Avg)	Precaution time (can be substituted with ventilating)
10-50m ²	120 M ³	Max 3 Hours	Max 1 Hour

* The nature of the room has an influence, many objects, etc. increases treatment needs

** The purpose of treatment plays a significant role in the duration of treatment. For example, it is easy to remove bad odours and viruses, whilst insects such as bedbugs and moths may take longer

Precaution time: As a precaution measure the room should not be used before the Ozone in the air has turned in to oxygen again. This happens naturally within 1 hour. The precaution time can be substituted fully by ventilating the room for 5 minutes eg. by opening the window or switching on the air conditioning.
