Dehumanisation of ‘Outgroups’ on Facebook and Twitter:

Towards a framework for assessing online hate organisations and actors

While preventing dehumanization of outgroups is a widely accepted goal in the field of countering violent extremism, current algorithms by social media platforms are focused on detecting individual samples through explicit language. This study tests whether explicit dehumanising language directed at Muslims is detected by tools of Facebook and Twitter; and further, whether the presence of explicit dehumanising terms is necessary to successfully dehumanise ‘the other’ – in this case, Muslims. Answering both these questions in the negative, this analysis extracts universally useful analytical tools that could be used together to consistently and competently assess actors using dehumanisation as a measure, even where that dehumanisation is cumulative and grounded in discourse, rather than explicit language. The output of one prolific actor identified by researchers as an anti-Muslim hate organisation, and four (4) other anti-Muslim actors, are discursively analysed, and impacts considered through the comments they elicit. While this study focuses on material gathered with respect to anti-Muslim discourses, the findings are relevant to a range of contexts where groups are dehumanised on the basis of race or other protected attribute. This study suggests it is possible to predict aggregate harm by specific actors from a range of samples of borderline content that each might be difficult to discern as harmful individually.

Keywords: dehumanisation, out-groups, dangerous organisations, digital platform policy, right wing extremism, content moderation.

Introduction

Following the Christchurch massacre, Facebook announced that it would ban praise, support, and representation of white nationalism and separatism on Facebook and Instagram. However, its own civil rights audit (Murphy, 2020) found,

[T]he policy is too narrow in that it only prohibits content expressly using the phrase(s) “white nationalism” or “white separatism,” and does not prohibit content that explicitly espouses the very same ideology without using those exact phrases...[T]his recommendation must be prioritized (49-50).

By all reports, Facebook hasn’t yet grappled with the question of how to identify white nationalist ideology where it isn’t overtly named.

Facebook claims to use a combination of AI and human expertise to remove content praising or supporting *any organisation* on their ‘list’, which includes 250 white supremacist organisations (51) since Christchurch.

Expanding on the category of ‘terrorist propaganda’ which typically relies on formalised branding and external designation and proscription lists, Facebook has created the category of ‘hate organization’. Once meeting a threshold for an organization, Facebook investigates whether it has ‘an ideology, statements, or physical actions that attack individuals based on a protected characteristic’ (Facebook, 2020).

Acknowledging that ‘hate organisation’ didn’t capture ideologically connected movements, in October 2020, Facebook moved to prohibit ‘Violence-Inducing Conspiracy Networks, such as QAnon’. Facebook reportedly also has internal metrics for determining how inciteful of violence a particular conspiracy network may be (Mac and Silverman, 2020).

Twitter expressly bans ‘violent organisations’. Twitter (2020) does not allow anyone to ‘promote violence against or directly attack or threaten other people based on a range of protected characteristics. However, their threshold for disallowing accounts is an account ‘whose primary purpose is *inciting harm* towards others on the basis of these categories’ [emphasis added].

The last vestige of protection against the spread of dehumanising conspiracy theories like the Great Replacement narrative, are their policies on hate speech (ISD and GDI 2020, 5). These policies typically involve the assessment of individual pieces of evidence.

For example, Facebook’s policy prohibits direct attacks on the basis of protected characteristics, which include a person’s ‘religious affiliation’, and defines ‘attack’ as “violent or dehumanizing speech, harmful stereotypes, statements of inferiority, or calls for exclusion or segregation.” Their policy also does not allow ‘Dehumanizing speech or imagery in the form of comparisons, generalizations, or unqualified behavioral statements (in written or visual form)’, and links it to a range of classically dehumanising comparisons such as ‘insects... filth, bacteria, disease... subhumanity... violent and sexual criminals’.

Twitter’s hateful conduct policy prohibits the dehumanisation of people on the basis of religion. As of late July 2020, it also prohibited third party malicious links that breach its hateful conduct rules.

Facebook (and by relation Instagram), Twitter, Youtube and LinkedIn recognize dehumanization as a particularly dangerous form of hatred as it removes moral objections one

may have to enact violence, even mass violence, against women (Marczak, 2018), children (Lentini, 2019), and civilians more broadly within a target group.

Aims of this research project

This study aimed to answer three questions: (1) whether explicit dehumanising language directed at Muslims is detected by auto-detection or content review tools on Facebook and Twitter; (2) whether explicit dehumanising language was needed to successfully dehumanise the 'other' – in this case, Muslims; and finally (3) what were the characteristics to dehumanising discourse.

Theoretical Framework for identifying dehumanisation

This research is grounded in the understanding that the specificities of language, and discourse more broadly is powerful in the propagation of extreme ideas (Wodak 2015).

This study builds on Maynard and Benesch's conclusion that dehumanisation can be carried out without 'hatred or blatant exclusionary discourse' (70), by analysing the operation and effectiveness of different modes of dehumanisation online.

According to the authors, dehumanisation is the most frequently employed technique in dangerous speech, where '[t]argets ... are described in a variety of ways that deny or diminish their humanity, reducing the moral significance of their future deaths or the duties owed to them by potential perpetrators' (80). Dehumanisation is often achieved through explicit dehumanising language: 'describing them as either biologically subhuman ("cockroaches", "microbes", "parasites", "yellow ants"), mechanically inhuman ("logs", "packages", "enemy morale"), or supernaturally alien ("devils", "Satan", "demons")' – and has been used historically to represent a minority as an existential threat to the majority (80).

Haslam's (2006) model that proposes links between conceptions of humanness and corresponding forms of dehumanization provided further detail for a theoretical base of this

study's discourse analysis. Like Maynard and Benesch, he refers to 'animalistic' and 'mechanistic' forms of dehumanisation but details the characteristics that underpin both. If a subject is dehumanised as a mechanistic form, they are portrayed as 'lacking in emotionality, warmth, cognitive openness, individual agency, and, because [human nature] is essentialized, depth.' A subject that is dehumanised as animalistic, is portrayed as 'coarse, uncultured, lacking in self-control, and unintelligent' and 'immoral or amoral' (258).

There is also still limited understanding of the influence of dehumanising content on the specified target group, in this case, Muslims, and any contribution to cumulative or reciprocal extremism (Abbas, 2020).

A policy proposal from Australian researchers and practitioners to the Global Internet Forum to Counter Terrorism (Risius et al, 2021), suggested that serial or systematic dehumanization of an outgroup should be used as a definitory factor to distinguish violent extremist content from fringe discourse. There, dehumanization was characterised as an ideologically sanctioned form of 'non-physical violence'. Risius et al write:

The normative context of dehumanization establishes social preconditions within which violence by extremist instigators is likely to be perceived as justified. They authorize individuals to perform violence and shape bystanders' reactions to these events, and establish the parameters for depersonalization and stigma (Goffman, 2009) or dehumanization and moral exclusion (Bandura, 1999).

Building upon these understandings, it is hoped this research will encourage digital platforms and regulators to more effectively intervene in dehumanisation, both as a harm and known pre-cursor to atrocity.

While this study brings together and builds on genocide prevention, psychology and discourse analysis fields, it may be one of the first English-language studies to explore the

function of dehumanisation within purposed online information operations and modern online discourse.

The Actors

This study focuses on one main a seed site identified in a detailed study undertaken by Benjamin Lee in 2015. Moreover, this actor was chosen as a main focus because it produces a significantly higher and more consistent volume of articles compared to the others. This seed site is the main production arm of Actor A, which is recognised as a hate organisation by researchers (ISD and GDI 2020, 26), but not Facebook and Twitter.

In order to illicit further insights, this study also examined the outputs of four (4) other actors to compare their respective use of traditional (explicit dehumanising language) and alternative (other language and discourse signals) methods of dehumanisation. Thus, in this paper,

- 'Actor A': David Horowitz Freedom Center is responsible for the project of 'Jihad Watch' website. It is US based.
- Actors B ('BareNakedIslam'), C ('Creeping Sharia') and E ('Richardson Post'). Actor E is Australian based. Actors B and C appear to be American.
- Actor D: The identity of this actor is unknown. Actor D's national location is not declared.

Results

Explicit Dehumanising Language Analysis – Main themes

Theme 1: Detection in comment threads is poor

Explicit dehumanising language ('invaders', 'disease', 'savages') directed at Muslims is frequently not detected by Facebook's and Twitter's tools. In June 2019, an Australian

Facebook page with more than 120,000 followers, known to routinely share Actor E articles, shared a poster entitled “The Great Replacement” (see Figure 1).

FIGURE 1 FROM FACEBOOK PAGE THAT ROUTINELY DISSEMINATES ACTOR E URLS

The meme was accompanied by similar derogatory statements implying that Muslims plan to conquer countries like Australia through higher fertility rates. The intense reactions to this poster were revealed in the extensive comments, with a significantly high proportion employing *explicit dehumanising language* (‘Islam is a cancer on global society for which there is no cure’, ‘You import the 3rd world you become the 3rd world. And when they become the majority then what next? They won’t have whitey to leech off. Just like locusts, infest & strip everything until there is nothing left’, ‘Deport the PEDO crap’, ‘They breed like rats’, ‘muslums....reminds me of aids’), *expressions of wanting to see Muslims killed or dead* (‘Shoot the fuckers’, ‘Drown em at birth’, ‘Society should start culling the Muslims’, ‘I think I now understand why during the serbian / croat the serbs culled the women’) and *veiled threats of violence* (‘I’m going out tonight to do as much as i can to solve this problem’.)

This study found all of the Actors that attracted comments had a pattern of eliciting explicit dehumanising remarks, extremist ideology-based remarks concerning the target group as an existential threat, or glorification of, or incitement towards, violence against the target group. Actors A, D and E attracted long comment threads, especially in well-populated Facebook pages, groups and Twitter accounts. Actor C posts had comparatively fewer comments, and Actor B posts had very few comments.

Given the scale of comments analysed in this study, many dehumanising attacks, but *all* expressions of wanting to kill or see Muslims dead, or glorifying the genocide of Muslims, were reported to Facebook and Twitter. Of all these reports, only a very marginal few were actually removed. This poor success rate underlines how automatic reviews struggle to accurately assess comments that are framed in response to material. Moreover, there were additional challenges to identifying dehumanisation in the anti-Muslim context.

Use of Islam as proxy to attack Muslims

This study has found that terms such as ‘Islam is a disease’, ‘Islam is a cancer’, ‘Kill Islam’, and ‘Exterminate Islam’ are acceptable to both Facebook and Twitter based on testing of the platforms’ reporting tools.

FIGURE 2: FROM TWITTER IN RESPONSE TO AN ACTOR A URL

When Islam is called a disease or cancer, it is conceived in a way that is growing and spreading which happens on account of its number of followers growing. Thus, calling Islam a disease

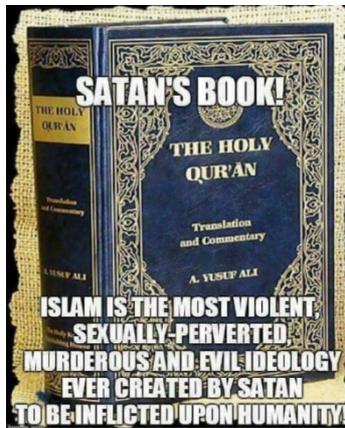

FIGURE 3 FROM FACEBOOK PAGE IN RESPONSE TO AN ACTOR A URL

or cancer involves an attack on Muslims. This is supported by the commentary about what must be done to ‘treat this cancer’; which always involves restrictions, deportation, or annihilation of Muslims (Figure 2).

Further, Islam is attributed human characteristics and actions, revealing this attack is directed at Muslims: ‘violent’, ‘sexually-perverted, murderous’ (see Figure 3).

Allowances for hate directed at criminals

Facebook’s hate speech policy protects members of certain groups based on protected characteristics like their religious affiliation, race, sexuality, but it does not extend to subsets of those groups, such as criminal elements. A user comment on the Paris beheading story of Actor A stated, ‘Time to behead all paedophile moslems. NOW....’. Facebook found this to be consistent with its community standards, most likely because the term ‘paedophile’ was included before ‘Moslems’. However, read contextually, Muslims are frequently referred to as paedophiles amongst these audiences, and the user in this case was responding to a story about a murderer, not a paedophile. These factors suggest the user is calling for all Muslims to be beheaded, not only a criminal subset, and this is how it would be readily interpreted by others on Facebook, especially by that audience.

Memes and cartoons

Automated systems often overlook images. For example, see Figures 2 and 4 that Twitter did not respond to, even after they were reported. Figures 1 and 3 were reported to Facebook and remained online.

FIGURE 4: MUSLIMS AND TURKS PORTRAYED AS DOG AND MONKEY LIKE ON TWITTER

Theme 2: Materials that trigger explicit dehumanising responses tend to take advantage of hot political currents or serve ulterior political purposes

Some different sampling techniques were used in October to see which Facebook pages had shared at least three Actor A URLs in a sample period of 5 days. The largest reaching anti-Muslim pages included one page with 15 administrators across multiple continents (with 66,000 followers), Actor A's own Facebook pages (amounting to more than 113,000 followers), an Australian page (with more than 147,000 followers), and a Canadian page (with over 35,000 followers). The following headlines in that sample produced some of the highest interactions: 'Joe Biden vows that Muslims will serve "at every level" of his administration' reached a potential audience of 429,572 followers (not including private groups or personal

pages). It prompted a stream of fury from its audience (e.g. ‘that sounds like aiding & abetting a TERRORIST denomination’) and the proliferation of memes in the comments and pages:

FIGURE 5 FROM FACEBOOK PAGE, IN RESPONSE TO ACTOR A URL

Responses on Actor A’s Twitter account to the same article referred to Muslims as a ‘virus’ and ‘disease’, including expressions that this decision would lead to violence (e.g. ‘More crime, more Beheadings, more female mutilation, more honor killings’), and that it was an example of ‘stealth jihad’.

Theme 3: There is a correlation between dehumanising language, extremist ideology and threats of violence

Audience responses to the article ‘Paris update: Muslim beheaded teacher in street because he had shown Muhammad cartoons in class’, shared Actor A’s Twitter account, included dehumanising references to Muslims (separate to the murderer) as a cancer, virus, animals, and savages, and spawned significant commentary on the ‘existential crisis’ faced by France and

the Western world from Islamic invasion, aided by liberals and the political establishment (with exception of Trump).

Audience responses to the same article on Facebook also revealed how these captured audiences interpret acts of terrorism and extremism conducted by ideologically motivated Muslims, and the frequent tendency to blame all Muslims and Islam, rather than the perpetrators alone. However, in this example on Facebook, it also escalated quickly to fantasies about violence. On Actor A's Facebook page, users responded with *dehumanising insults* ('They are worse than rabid animals, no brains of their own and vile to the core', 'MOSLEMS ARE INCOMPATIBLE WITH HUMANKIND', 'never trust them they are two faced. Like two people in one being. Ultimately their loyalty is towards Islam which is evil. If they never change their views on Islam no Matter how friendly, caring, compassionate they seem. If it came down to it they can become the most evil vile & depraved creature'); *calls to expunge Muslims* ('Do not let this atrocity happen in the US, vote the squad out, they are the enemy of mankind'); *repetition of demographic invasion/white genocide theory* ('They don't come to assimilate into western society, they come to dominate and conquer the infidels!! Wake up sheeple, these are barbarians!!', 'The ppl of Europe have to be detoxified from the twin evils of multiculturalism and diversity and then get rid of the leaders that spew lies and willingly put their own citizens to danger and evil'); *glorification of genocide of Muslims* ('The muslims are the only people on Earth who will earn their genocide, but they will be the only genocided people for whom nobody will have a drop of tear'); *calls to war* ('Europe has been Invaded and occupied by Muslims, who have claimed Europe as theirs, since they have Proclaimed Sharia Law! NATO will have to declare War on the European Islamic Caliphate and Attack European Muslim Strongholds, if they want to become an Independent Europe again?', 'this cult should have its head cut off before it is too late ,have you ever thought about when the oil runs out this cult will be looking at us ,and they will show no mercy'); and *calls to vigilante*

violence ‘Servicemen only ask: CAN WE GO KILL THESE FUCKERS YET
Barbarians/E.F.Whulfh’ posted by a user along with the meme below, Figure 6)

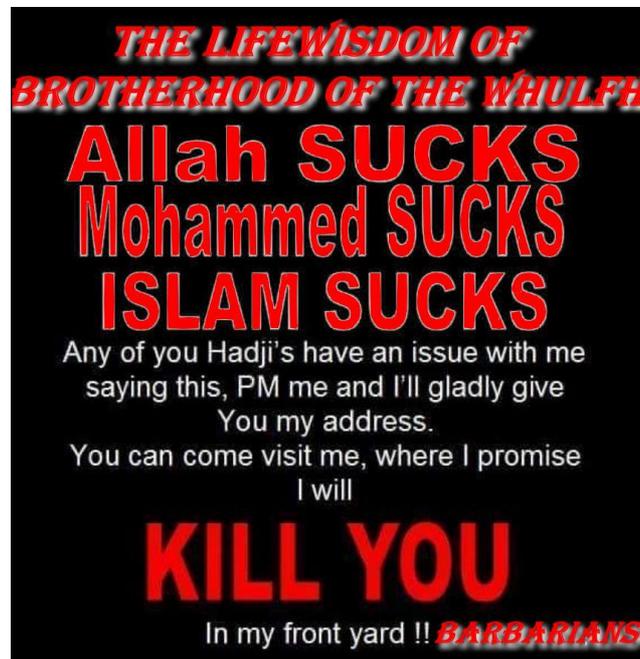

FIGURE 6 from Facebook posted in response to an Actor A URL

A steady flow of these articles appeared to prime audiences to use explicit dehumanising language and become susceptible to incitement (Maynard and Benesch 2016, 79).

Theme 4: Article headlines don't use explicit dehumanising language to trigger such language in the comment threads

Given the dehumanising language in the comment threads, it was then investigated whether the headline of the stories that spurred these responses also contained explicit dehumanising language.

In the studied samples, Actors A, C, D and E avoided using explicit dehumanising language for Muslims in their headlines; it is suggested that this was to appear more reliable

and objective. Additionally, it would reduce the likelihood that sharing these articles will trigger hate speech detection on social media. In contrast, Actor B relied more heavily on dehumanising slurs in the forms of synonyms and adjectives. For example, a variation of ‘illegal alien Muslim invaders’ was frequently used instead of ‘Muslims’. It used the descriptor of ‘frothing-at-the-mouth’ to describe a Muslim carrying out violence. Interestingly, Actor B also conjured far fewer comments on Twitter. It is possible that the explicit dehumanising language in the headline made it unnecessary for the user to voice their disgust. It is also possible that there are other algorithmic factors at play, which may have influenced the number of comments.

Dehumanisation without the explicit dehumanising language – Main themes

Theme 1: Dehumanising conceptions can be present in ideology and work to dehumanise an out-group to an in-group audience.

Staying with this expanded ‘roots and leaves’ focus, we then considered whether there could be other signals or properties in the posted content that prompted responses to use explicit dehumanising language. Our first step was to return to their home websites.

Actor A is a central figure of the ‘counter jihad’ movement. Scholars like Benjamin Lee (2015, 251-3), Melagrou-Hitchens and Brun (2013), and others, classify the ‘counter-jihad’ movement as an extreme-right movement. Their site relies on a heavily skewed misrepresentation of Islamic theology to advance a demographic invasion narrative. Its predominant themes can be demonstrated in their ‘FAQ’ and ‘Islam 101’ pages. In this text, ‘Islam’ is personified by the attribution of human actions and qualities to the religion as a whole [emphasis added]:

- ‘Islam exists in a fundamental and permanent state of war with non-Islamic civilizations, cultures, and individuals (a group of people, not a religion, can be in a state of war with civilisation)’,

- ‘A halt to terrorism would simply mean a change in *Islam’s tactics* — perhaps indicating *a longer-term approach that would allow Muslim immigration and higher birth rates to bring Islam closer to victory* before the next round of violence’,
- ‘Islam proper *remains permanently hostile*’, and
- ‘Islam’s *violent nature* must be accepted as given’.

This personification of Islam in this discourse enables Muslims to be portrayed as an existential threat implicitly, without falling foul of hate speech, as on the surface, a religion – not people – is the subject of attack. This distinction between content and discourse analysis that this paper seeks to highlight.

Dehumanising conceptions in this studied discourse include the portrayal of Muslims as:

- (1) ‘mechanically inhuman’ (Maynard and Benesch 2016, 80) ‘theological automatons’ who are ‘unified in thought and deed’ to carry out demographic invasion (Lee 2015, 252). Significantly, it follows that there is no way to tell if Muslims are truly peaceable or not.
- (2) ‘Subhuman’ (Maynard and Benesch 2016, 80) in their inherent violence, barbarism, savagery, or plan to infiltrate, flood, reproduce and replace (like disease, vermin).

Further, the site engenders a perception of legitimacy by seemingly engaging with primary texts of Islamic jurisprudence. However, extreme right-wing actors often authored the material presented rather than stemming from genuine engagement with academic scholarship. For example, of great concern was the publication of Bat Yeor’s work in the ‘Frequently Asked Questions’ and ‘Islam 101’ pages of the site. Yeor is the original author of the Eurabian conspiracy theory, whose ideas were heavily drawn upon by Norwegian terrorist Anders Breivik (Archer 2013; Berntzen and Sandberg 2014). In this regard, social media platforms could also take legitimate action against Actor A based on *disinformation*, as studies have

shown that personal religiosity and spirituality in Islam is inversely related to violent extremism (Beller and Kröger 2018; Aly and Striegher 2012) and that terrorism by ideologically motivated Muslims overwhelmingly targets Muslim victims (and does not substantiate ‘a clash of civilisations’) (Cordesman 2017).

Comments made directly on Actor A’s website were also analysed to provide further insight into the community and the effect of these articles on its readers in relation the October sample of Actor A. For example, dehumanising insults focused on Muslim men as sexual deviants (‘Muslim men do not have sexual relationships with women. They rape them. That is all they know how to do’); and Muslims as subhuman (‘Muslims are the dregs of the world and 90% don’t even qualify as humans’, ‘mad dogs’, ‘animals’, ‘brutal Muslim beasts’). Further, many users employed the dangerous speech technique of threat construction to make violence and war against Muslims appear legitimate, proportionate, and in some cases, even necessary. Reader comments frequently reflected the premise of the site, that religiosity in Islam leads to sub-humanity and extremism.

Ideological assessment of Actors A and B was most straightforward, as both sites openly summarised their rationale. Actor C’s site conveyed their rationale indirectly: For example, a list of ‘Muslim enclaves in America’ and menu choices pointed to Muslims as the enemy within or outside.

For Actor E, an Australian website, ideology was assessed by the prominence of demographic invasion and cultural genocide/suicide arguments in published opinion pieces, including by the site's editor. Examples include the following,

‘Turkey provides a particularly gruesome example in the late 19th and early 20th century for what happens next to Jacinda’s daughters and friends when Muslims rise up in New Zealand. ... Christian women were crucified naked, the Muslim way, where a sharpened stake was inserted into their vagina and hammered up through their abdomen for a slow, painful death.’

When repeated throughout Actor E publications, statements like these create an increasingly irreversible picture of all Muslims as inherently barbaric.

A network of related sites was labelled Actor D. This collection of ‘news’ sites appeared to have the same creator and carried titles related to ‘free speech’, ‘the real news’, and ‘the truth’. However, almost all stories lacked an identifiable author and the sites themselves did not identify an editorial team. The headlines relating to Muslims and Islam shared much in common with other actors in this study. Notably, links to this collection of websites were blocked on Twitter but remained widely shared on Facebook. Actor D articles were posted daily to dedicated anti-Muslim and far-right Facebook communities.

From this exercise, it was clear that only some websites openly surmised their ideological position, whereas for others, it had to be interpreted through qualitative assessment of their work. Moving forward, there needed to be universal markers that could measure dehumanisation as part of that qualitative assessment.

Theme 2: Headline language can dehumanise an outgroup through choice of participants and verbs over time.

The following step was to look at the features of the outputs of Actor A, to consider whether there were other language signals that constructed the target group as subhuman or inhuman. We began where most sentences begin, with the participant (also known as the subject).

Essentialising ‘out-group’ identity

For Actor A, which purports to be concerned with Islamic demographic invasion and violent jihad, most of its headline subjects involve a wide net of Muslim identities. Whether a Muslim subject is serving in an administration, a progressive politician living in the West, an ordinary person seeking to migrate to another country, committing a heinous crime, expressing

controversial or offensive views, or seeking human rights protection; whether they live in the US, Europe, India, Australia or the Middle East; or whether it is a Muslim majority nation state like Turkey, Pakistan or Iran, they're identified and centred as a the 'Muslim subject'. Subjects used in Actor A's headlines included:

1st sample: Muslim, Islamic movement, Muslim Cleric, Intifada, Islamic state, Iran-backed Jihadis, Iranian jihadists, Health Jihad, Muslim preacher, Muslims, Muslim students, Muslim leader, Muslim software engineer

2nd sample: Muslim, Muslim cleric, Niqab-clad Muslima, Muslima, Hamas-linked CAIR, Muslim migrant, 'guardian of morals', Illegal Muslim boat migrants, Egyptian migrant, Muslim professor, Jihadi murderers

3rd sample: Muslim, 'real victims' according to CAIR, Islamic Terror Sheikh, Muslim population, Muslim leader, Muslim migrant, Islamic State, migrants, Muslim migrant camp, Muslim cleric, Muslim lawyer, Shi'ite Muslims, Muslim, Muslims

4th sample: Muslim migrant, Muslim terrorist, Convert to Islam, Rashida Tlaib and Ilhan Omar, Muslim voter, Imam, Muslim Legal Fund of America, Wife of Orlando jihad watch mass murderer, Large Muslim population, Father of Muslim, Grandparents, brothers of Muslim, Muslim family, Black Muslim bakery, Muslim mass gatherings, Muslim judges, Muslim Arab youths, Illegal migrants, Islam, Mass migration, Muslims, Muslim cleric, Muslima

The melding of Muslim identities into one harmful threat is necessary for the argument that all Muslims are potential terrorists or terrorist sympathisers; and any Muslim, on account of their faith, could be inherently disloyal, deceptive, and harmful to their home country. This conception is built on the inaccurate premise that Islam itself is what radicalises people towards violence. This form of dehumanisation is achieved *in part* through the essentialising of Muslim identity, with cumulative headlines as a vehicle to its dissemination and acceptance within wider society.

Similarly, Actors B, C, D, E seemed to draw on a wide net to essentialise Muslims as a hostile mass to their in-group audience, so this was a clear indicator of such purposed information campaigns.

Negligible focus on ISIL/Al-Qaeda

Overall, in the samples studied pertaining to Actor A, it was interesting to note that there was an extremely limited focus on ISIL and Al-Qaeda in the headlines. The two times ISIL was referred to by Actor A, was to propagate its message or connect it with Islam (i.e. ‘Islamic state hails 9/11 as ‘pivotal moment for Islam’, and ‘France: Man converts to Islam, becomes torturer and executioner for the Islamic State’). Actor A shows a strong preference for referring to Muslims as the participant in its headlines; for example, ‘Cameroon: Muslims target Catholic mission, murder 28, including 7 children ages 3 to 18’. ISIL and Al-Qaeda were even more absent in Actor B and Actor E headlines, however Actor C relied on references to ISIS more (8 out of 60 headlines).

The cumulative impact of dehumanising verbs in headlines

Following our focus on the participant, we examined patterns in the verbs. Narrative writers know that carefully selected verbs and actions are a powerful tool to vividly portray a character – more so than any number of adjectives. Yet platforms are focused on dehumanising slurs that come in the form of synonyms and adjectives, as opposed to verbs. On average, Actor A produced 6-7 articles a day. The following verbs were attributed to a ‘Muslim’ participant in their headlines:

1st sample: Threaten to kill, sexually assaults, attack, murders, complaint, kidnap another, join forces, forcibly convert, kidnapped women and children held, breaks into, rapes, blames, torturer and executioner, spread the virus, ‘punishes’ you, ransack government buildings, threaten American facilities.

2nd sample: Plant IED, six children killed, Smashes Hindu idols, cheer scream Allahu Akbar, Sues McDonalds franchise for discrimination, Screams Allahu Akbar, struggles violently with police, committed the most extensive spree of felonies by a congressperson in US history (Ilhan Omar), threaten 'too Western' women, hang their pictures in mosques, Kidnaps minor Hindu girl at gunpoint, target Catholic mission, murder 28 including children ages 3 to 18, holds hostage at knifepoint, plotted to murder, revolt aboard Italian coronavirus quarantine ship, abandons LGBT alliance, feign reform, fools the establishment.

3rd sample: Screaming Allahu Akbar, Stabs, critically injures, Stabs, Escape, Attacks, sets fire, says it is a 'hate crime', Collects \$35 000, Migrate, File complaint, made jihad bomb threat.

4th sample: Murders priest, Beheaded, Beats woman to death, Turned to terror, Call for high Muslim voter turnout, Screaming Allahu Akkbar beheads man, threatens police, is 'suspected terrorist', Beheads, Beheaded, Killed, Gets 28 years for hammer attack, Arrested , Will serve at 'every level' of his administration, Beats woman to death, Stabbed, proud of son, Beheaded, Arrives from Iraq in private jet, Proud of trying to honor-murder ex-wife, Tried to steal \$22 million, but isn't killing people anymore, Go on, Want to migrate to the west, Destroyed Europe, Open fire on bus, try to separate passengers by religion, say they won't administer marriage ceremonies if celebrations include music and dance, ransacks supermarket, allowed to keep veil.

Actor A relied on negative verbs to associate Muslim identity with sub-humanity, sexual deviancy, and construct them as an existential threat. This pattern was found across the Actors, with exception of Actor C, who tended to use more legal and technical verbs, as well as passive voice, which muted the impact of their verbs ('arrested', 'indicted', 'testifying', 'charged', 'linked').

Actor B's reliance on dehumanising verbs to convey sub-humanity over time was as prolific as Actor A – for example: 'Doesn't hide his disgust for non-Muslims', 'Set fires', 'Beat up a white guy', 'Smuggling', 'Threaten', 'Burn down', 'Put up in 5 star luxury hotels',

‘Demands ‘hate crime’ investigation’, ‘Brutally stabbed’, ‘Killing’, ‘Critically injuring’, ‘Replaced them’.

Actor D attributed the following actions to a range of Muslim actors: ‘Explains that child marriage is perfectly fine’, ‘Complain about life in the UK’, ‘Murdered his daughters’, ‘Abducted and raped 6 year old Christian girl’, ‘Calls to burn women’s face with acid if they refuse to wear hijab’, ‘Promises terror attacks’, ‘Killing Jews’, ‘Starves his 13 year old wife’, ‘Murdered in acid attack’, ‘Celebrates as he marries 14 year old Australian girl’.

Actor E tethered Muslim actors together with actions such as ‘hacked to death and beheaded’ and ‘brutally murdered’.

The cumulative use of dehumanising verbs was strong indicator of a purposed information campaign.

Theme 3: Coded language acts as a touchstone or lightning rod for dehumanising conceptions

To a significant degree, Actor B’s headlines, and to a smaller degree Actor A and Actor E’s headlines, used coded language invoking extreme right demographic replacement theories. Such language included ‘no go zone’, ‘invader’, ‘invasion’, ‘sharia Sweden’, ‘anti-Islamization’, ‘cultural enrichment’, ‘colonisation’, and ‘conquest’. Actor B referred to Muslims as ‘invaders’ in a third of its sampled headlines. Christchurch terrorist, Brenton Tarrant, also referred to Muslims as ‘invaders’ in his so-called manifesto. The use of coded language serves to make such terms mainstream, but also acts as a lightning rod for user comments expounding upon these theories.

Theme 4: ‘Accusation in the mirror’ and dehumanisation work hand in hand.

Characterising a group as mechanically inhuman (and thus incapable of independent thought or feeling) is dehumanising. But it’s also foundational to a technique called ‘accusation in the

mirror’, used to incite violence. Maynard and Benesch explain ‘accusation in the mirror’ as a technique designed to construct an out-group as an existential threat to the in-group,

In a strange yet common form of threat construction, a speaker accuses another group of planning to engage in the sort of violence that the speaker wants to see perpetrated against them, instead. This has been dubbed (originally in a Hutu propaganda manual discovered after the 1994 genocide) “accusation in a mirror.” [citations omitted] Examples of the technique are legion. In the speech with which we opened this article, Arthur Seyss-Inquart accused Jews of planning to annihilate the German people—a baseless claim that in fact mirrored what the Nazis planned and would attempt to do to the Jews. (82).

The claims that Muslims are acting as trojan horse in the West, with the plan to wipe out all non-Muslims, has been used to justify violence by Breivik, Tarrant and others. Very occasionally, Actor A used phrases that could be characterised as ‘accusation in the mirror’. For example, ‘Erdogan threatens to declare a *religious war* against Christians after Austria closed mosques’, ‘Islamic Movement and Left Join Forces in *anti-American Revolution* (a 3 part story)’, ‘Australia: Muslim leader says Israelis “are waiting for the *Islamic nation to carry out the jihad against them*”’.

In addition, Actor B explicit labels Muslims as ‘illegal alien Muslim invaders’, as well as propounding invasion notions in headlines such as, ‘UK: The *Muslim invasion* is real and exploding’. Actor E referred to ‘*Islamic colonisation*’ and ‘*conquest*’. ‘Accusation in the mirror’ was not observed in Actor C headlines.

Theme 5: Many headlines triggered explicit dehumanising responses with value-neutral language.

Additionally, this study identified a further category of headlines that did not use explicit dehumanising language, whether in the form of verbs or descriptors, at all.

Most notably, in the September sample of Actor A, a majority of headlines did not use dehumanising descriptors, verbs or coded language (21 of 34 published posts); for example, ‘Muslim leader says “Islam is the second religion in France. Those who do not like us have only to leave France”’. It did however generate some of the largest numbers of user comments on Twitter for the same sample, including explicit dehumanising language (‘Stop it before this became forth stage cancer’, ‘blood sucking cult’, ‘Average muslim has genetic disorders due to consanguinity’, ‘who would make friendship with snakes?’), and iteration of demographic invasion theories (‘in the name of secularism and liberalism u gave them shelter and in return they will loot u kill u convert u’, ‘The disease of Islam is poisoning Western society’). This headline also prompted ominous calls to expunge Muslims from France:

‘Sad to see the demise of a great european country. This virus will kill every european nation in the next 30 to 50 years if not treated in time.’

‘The French tried to be nice and show how accommodating they were, now they are about to reap the fruits. You still have time to spray "malathion" [an insecticide] and get rid of the weeds.’

‘China, Israel and Myanmar are best examples of dealing with radical Islamic terrorism and Jihadist.’

‘@EU_Commission r u feeling bruh? where're u going to go on boats full of yourself becoming refugees, an outcome of letting these invaders? @francediplo_EN @French_Gov its not too late to buckle up, hustle & set law & order right. screw human right idiots’

‘When will the world see that they multiply like rats. they will not let our future generations live in peace. the only solution is to separate them from our lands, just like what Poland does.’

Some Twitter users were more pointed in their calls for violence, which was heavily accompanied by dehumanising language:

‘But this breed is neither goin to change nor they can be restricted. There’s only one solution to this..... You know what’

In response to the above tweet:

‘You know what, they will change but they need a treatment like Uighurs’

‘The only issue is that normal human being can’t go to that extent, not in our imaginations, that is the perk they are thriving on. When you become ruthless, make them untouchable, they will come to their sense’

‘True. But this breed itself thinks that they are untouchables. They can’t come to their senses because they are born non-sense.’

‘Time for another round of crusades Really we need it Deploy Army and all fight against it’

In contrast, the Facebook user comment thread on this article had less dehumanising insults and more reiteration of the demographic invasion theory, lamenting the ‘loss’ of France and Europe, saying they [Europeans/Westerners] brought it upon themselves, and warning fellow Americans about the ‘Muslim plan’. This one article reached an estimated audience of 366, 844 Facebook followers (not including private groups or personal pages).

The degree to which each actor in each sample relied on dehumanising descriptors, verbs, and coded right-wing extremist language varied significantly across the samples:

Proportion of headlines without dehumanising descriptors, verbs or coded language

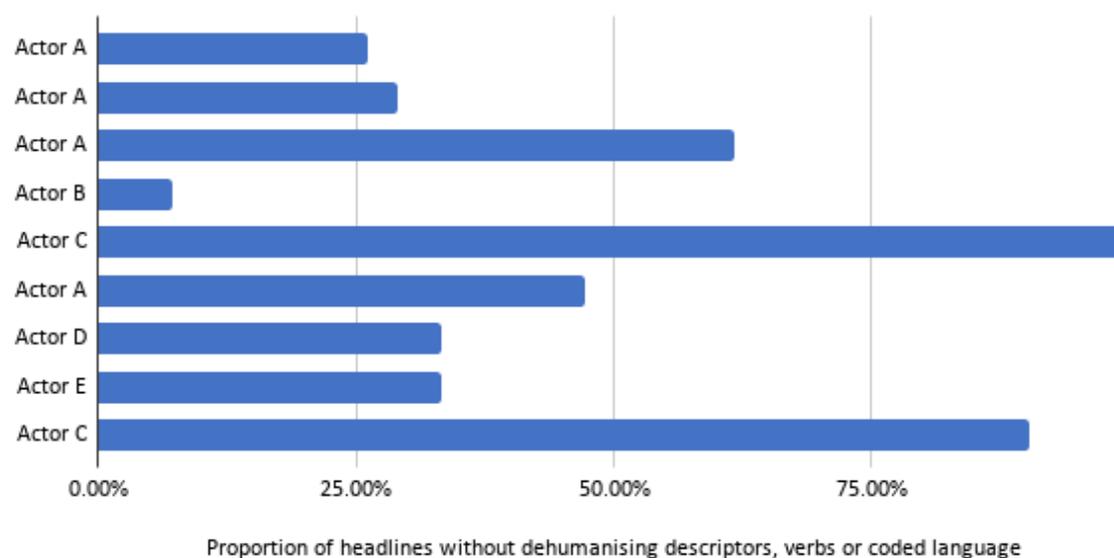

FIGURE 7

In the first Actor A sample containing articles primarily from July, these particular headlines leveraged anxiety about the recent Coronavirus pandemic to portray Muslims as an existential threat. For example: ‘Pakistan: Muslims crowd into mosques, “We don’t believe in coronavirus, we believe in Allah.”’, ‘India Muslim software engineer: “Let’s join hands, go out and sneeze with open mouth in public. Spread the virus”’, and ‘Italy: Muslim says coronavirus is “something from Allah, a positive thing” because “people are going mad”’. Here, the headlines allegedly quote individual Muslims to propagate the dehumanising discourse that Muslims act as a collective, without the capacity for independent thinking reflexes or human empathy.

Actor C focused substantially on charges, arrests, and anniversaries in relation to terrorism perpetrated by Muslims (‘U.S. Has Repatriated 27 Americans from Syria and Iraq incl 10 Charged with Terrorism-Related Offenses for Their Support to ISIS Terrorists’), and linked this behaviour to Muslim identity and Islam more broadly through its implied concern

about Muslims seeking election in the United States (‘Terror-linked CAIR attempting to “Train 200 Muslim Candidates to Run for Office”’, ‘Joe Biden says Muslims will serve “at every level” in his administration’, ‘Michigan: Gun-banning, Squad-supporting Muslim seeks House seat in District 4’). Its reliance on explicit language to dehumanise Muslims was comparatively very low. Unlike the other Actors, Actor C was mainly focused on Muslims in the US. From its headlines, one could deduce that the greatest threat posed by Muslims to the US was not demographic invasion, but terrorism and ‘infiltration’ through the electoral system.

Without using explicit dehumanising language, Actor D successfully conveyed dehumanising discourse such as Muslims are barbaric (‘Watch: immigrant in the UK explains that child marriage is perfectly fine’ and ‘Watch: 50 year old Muslim Man starves his 13 year old wife for disobeying him’), with demographic invasion/replacement narratives (‘German mother cries “we feel like foreigners” as 2 of 25 in son’s daycare speak German’, and ‘Sharia is gaining popularity in France as Jews are driven out’).

The marshalling of stories to create an overwhelming sense of crisis and disgust does not always rely on explicit dehumanising descriptors, verbs, or coded language in the headlines. It appeared that where an audience had been primed over time, implied properties in text were capable of triggering entire sub-texts.

Establishing proofs for extreme right narratives while maintaining value neutral language.

From here, we hypothesised that actors employed apparently neutral headlines to act as a dog whistle or touchstone to underlying theories. Often these kinds of headlines prompted users to explain the dehumanising theory about the outgroup in the comment thread – either to helpfully connect the dots for other readers, or to demonstrate superior insight. All headlines

were analysed for whether they offered ‘proof’ to extreme right narratives about Muslims and Islam.

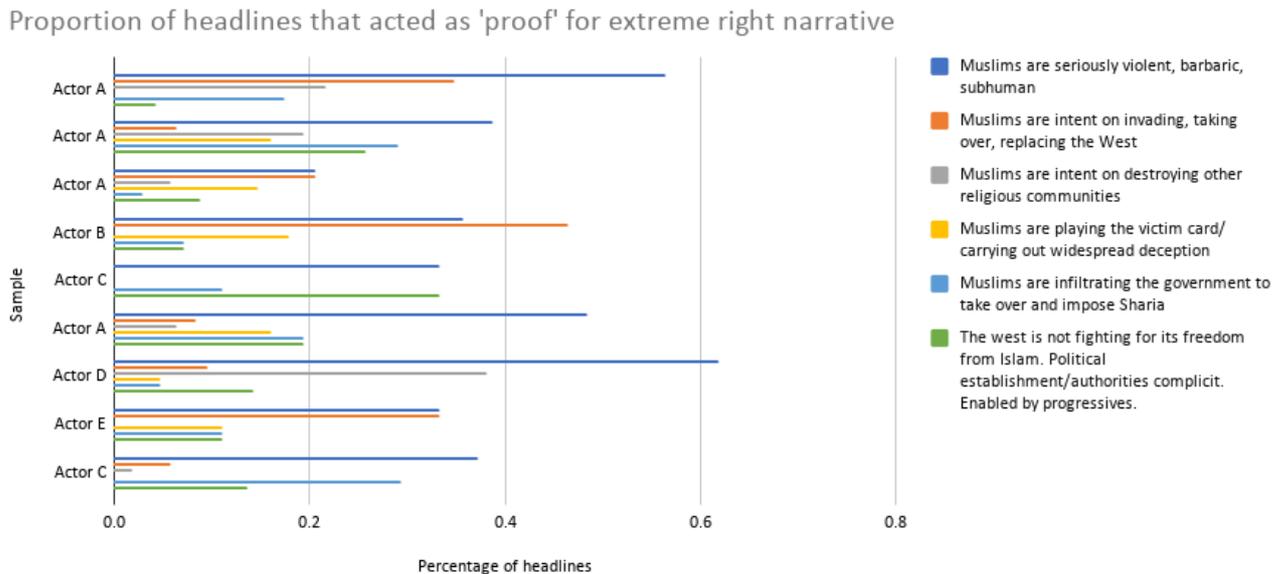

FIGURE 8

The narrative that Muslims are seriously violent, barbaric, and sub-human was dominant for all Actors with exception of Actor B. Demographic invasion was the most significant narrative focus for Actor B, and equally significant focus for Actor E, and a consistently substantial narrative for Actor A. Proportionally, all of the Actors provided ‘proofs’ through their headlines for a broad range of extreme right narratives.

Baiting the ‘in-group’ audience could be done with value-neutral language.

It was also clear that in-group audiences were being baited with headlines. For example, ‘New book claims landmarks of Western church architecture were “stolen” from the Islamic World’ was a form of ‘baiting’ an in-group, given their attachment to the idea that Western civilisation

is superior, separable, and ‘pure’ of Islamic influence. Headlines that tap into the narrative that authorities are impotent or complicit in this threat create an overwhelming sense of rage for some members of the in-group. In the September sample alone, Actor A framed authorities in the US, UK, France, Sweden, India, and Denmark in this manner (‘Cops insist it is a love affair and refuse to investigate’, ‘French cops in Muslim no-go zone: “You only have to move somewhere else” or go vigilante’, ‘Fearing charges of Islamophobia government allows sharia marriages’).

Treating user responses as a guide, a headline that tapped into in-group outrage that the outgroup was, in their distorted worldview, taking advantage of western liberal democratic largesse to culturally ‘contaminate’ and take over, was a powerful trigger. For example, Actor A’s article ‘Muslims migrate to Australia, file complaint with Human Rights Commission because food they’re given isn’t halal’ produced numerous responses expounding on demographic invasion and white genocide. Common dehumanising conceptions from those on Twitter were that Muslims originate from ‘cesspools’, ‘toilet bowl countries’, and ‘shitholes’, and that resisting their plot had to be done for the sake of ‘civilised world and culture’. It appeared to ‘trigger’ users who saw this as an attempt to ‘placate the Moslem invaders’. One user commented, ‘Physical appearance of mooslems is like normal human being but mentally like cold blooded demon, Ogre.’ The word ‘infiltrate’ was preferred to migrate. Many spoke about the ‘stages’ of ‘jihad’ in taking over a country: ‘It starts with halal food, next is burning cities and killing infidels.’ While others lamented that the west was contributing to its defeat: ‘A secularism & multiculturalism is a breeding ground for deadly peaceful community virus (Islam).’ The disgust prompted by this headline also led to calls to expunge: ‘What are the options available with Australia? Will they let the cancer spread there also, like it has in Europe?’

Actor A's baiting headline, 'Germany: Thermal spa in area with large Muslim population bans bikinis that are too tight' was one of the top performing articles on Facebook. This headline, without any dehumanising descriptors, verbs, or coded language, prompted responses from Actor A's Facebook audience that included dehumanising insults ('cockroaches', 'insidious mould', 'trojan horse', 'piss on them', 'plague of humankind', 'quranimal'), calls to expunge and restrict Muslim immigration ('ban the satanic cult instead', 'fuck off back to a Muslim country you fucktards' and 'deport the pedophiles along with Merkel'), and calls to violence ('time for ethnic cleansing!').

Manufactured irony was a powerful baiting technique

Quotes from Muslims that mirror how the in-group audience feels towards Muslims were favoured in headlines and produced strong user reactions. For example, the Actor A headline, 'UK Muslim preacher is Extremely offended by British Women Who Show Hair, Put on Makeup & Perfume in Public' triggered its audience with the terms 'extremely offended', prompting Facebook user responses with explicit dehumanisation language such as,

'I am deeply offended at the manner in which these moronic followers of the satanic cult founded by the pedophile false prophet Mu Ham Mad, are so easily offended in countries which they have deliberately invaded!'

'THEY OFFEND ME. THEY RAPE LITTLE BOYS AND GIRLS. THEY DO NOT RESPECT WOMAN. THEY HOLD THE WOMEN DOWN. AND THEY WANT EVERY INFIDEL [AMERICAN] DEAD! THEY SHOULD GO BACK TO THEIR MUSLIM COUNTRIES.'

'I'm offended by Islam and everything it represents, sick to death of the demands these Neanderthal inbreds make daily !'

'Well I'm offered by Muslims. Their nothing but pig's.... No wait a min pigs are a lot better than Muslims. At least pig's don't f..k their young like Muslim men do'

‘What DOESN'T offend these subhuman monsters???’

This headline also prompted expressions of wanting to see Muslims dead: ‘please just go put a C4 vest on and press the button’, and ‘NO, EXTERMINATE ALL ISLAM’.

Similar techniques and responses were observed on Twitter. A tweet which included a link to article titled: ‘Turks irked at Qur’an-burning in Sweden: “We expect Swedish authorities to take all measures to **fight this disease**” [emphasis added] prompted numerous responses that Islam, jihad, and Turkish people were the disease, as well as other dehumanising references to ‘refugee parasites’, and Muslims as ‘snakes’.

A tweet which included a link to an article titled: ‘Sweden: Rioting Muslima screams “Why did they bring us here, the *stray dogs*, if they do not want Islam?”’ [emphasis added] prompted responses characterising Muslims as dogs, snakes and rubbish. This tweet also generated comments inciting violence. One person commented with a meme showing a gun being placed in a Muslim man’s mouth, with the words, ‘The only way to deal with Islam’. Another user commented, ‘Give them red hot copper capsules, they love it, it's the ticket to jannat for them. . . . They are the predecessors of desert cannibals’, again showing the relationship between dehumanising insults and calls to violence. Twitter users also responded, ‘Send them back to their own country or put them under detention till they die’, and ‘Dump them in the sea.’

These headlines manufactured a sense of irony that Muslims would be daring to accuse others of things that are ‘true’ about themselves, according to in-group members. This irony seemed to powerfully trigger those in-group audiences, stirring explicit dehumanising language and threats of violence.

Implications of Dehumanising Language Analysis for Understanding Content on Facebook and Twitter

The presence of dehumanising *language* is unnecessary to propagate dehumanising *discourse*, yet it is the specificity of dehumanising language that social media companies largely rely upon to detect online hate actors.

This study underlines the need to adopt a different framework capable of assessing manipulative and dehumanising ‘identity builds’ of out-groups that go beyond explicit dehumanising synonyms or adjectives. As part of this framework, platforms might assess an Actor’s information campaign by considering the following elements

- In some cases, the ideology stated on actor websites
- whether the actor has personified and dehumanised a noun as a direct proxy for a group
- participants (nouns) and verbs of headlines that work cumulatively to essentialise and dehumanise the subject
- headlines that act as proofs for dehumanising conceptions and theories,
- headlines that bait in-group audiences
- and in some cases, a pattern of hate speech and other violent speech in the comment threads.

While some information campaigns will have overt ideological agendas, and some won’t, the above markers have the potential to act as cues for cumulative dehumanisation.

Counter-jihad ideology and dehumanisation

Moreover, this study raises questions about platform treatment of dehumanising *conceptions* about Muslims. It would appear that Facebook and Twitter are still unclear on whether 'counter jihad' ideology is harmful disinformation that dehumanises Muslims.

As discussed in this paper, Islam is frequently used as a proxy for Muslims. In counter jihad discourse, Islam is attributed human actions and qualities and then dehumanised, as a seemingly more liberal route to dehumanising Muslims.

Conclusion

This study relied predominantly upon qualitative analysis of the online content; however, such analysis could be upscaled in the future through natural language processing and machine learning, like the Institute for Strategic Dialogue has already begun doing with Twitter data (Davey et al 2020).

Platforms' self-evaluation reports and mandated transparency reports by nation states may carry little value while systems do not detect dehumanisation. Furthermore, social media companies often lack explicable policies on how they assess 'hate' or 'dangerous' organisations to bar them from using their platforms. Given its established links to atrocities and genocide, dehumanisation offers a widely accepted measure. However, as this study suggests, its operation through discourse (not language alone) must be analysed by platforms to competently assess actors and their information operations.
