

## PROJECT :

## KMI UKKEL

RESTORATION AND  
RENOVATION OF COMPLEX  
ROOF STRUCTURES

The Royal Metereological Institute at Ukkel comprises an amalgam of a number of different buildings with various geometrical structures.

All these roofs needed an urgent restoration and renovation. To **RAMAST LTD CONSTRUCTION CY** was entrusted the mission to remove in phases the old synthetic roofings and to replace these by the original metal coverings.

So we distinct :

- the Royal Star Observation and the pendulum cellar : prepatined zinc
- the Mire Central : natural copper
- the roofs of the Pavilions North and South : natural zinc
- the Directors house : natural zinc with standing seam

The work not only comprises the former coverings, but also the complete renewal of the wooden spans and purlins, insulations and the 19th century cornices.

In this way the required historical glory was returned to these houses.
