P Class 3
D16 Class 2

THE REALISATION OF A SAFE ENVIRONMENT FOR THE INDIVIDUAL VISITORS

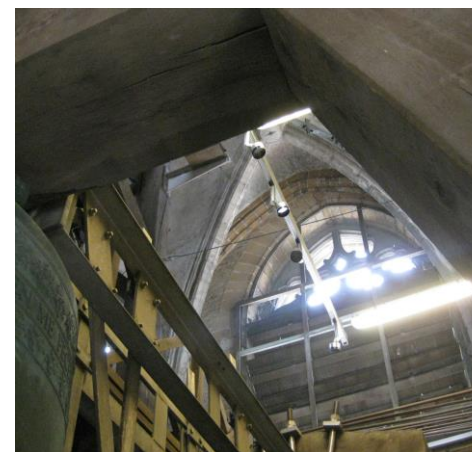

The Sint-Rombouts tower, part of the gothic Sint-Rombouts cathedral dates already from the 15nd century. Starting with foundations in 1449, in the end one reached, after great effort and a stand still of three years in 1455, only in 1516 the actual height.

In the two middle buttresses of the sides of this magnificent construction two (tower)high wooden spiral staircase ensembles are encased allowing access to the roof.

In order to allow the visitors to visit sound and safe this classified monument the trail that they cover has been provided with the necessary comfort with the expected enclosures and the necessary technical safeties have been installed to do so.

RAMAST consecutively took charge of all furniture and decoration works, the sitting bancs, the entrance counter and all wooden encasings for the clearing away of the technical installations and cabling.

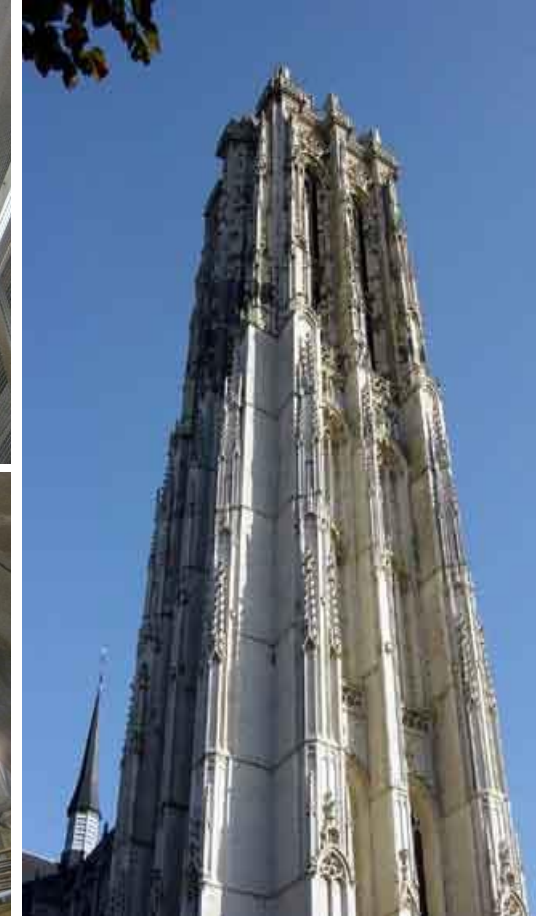

Concerning the sanitary new fire conduits with a hydrofore pump were foreseen.

RAMAST = TAILORMADE CONSTRUCTION

In the frame of the contract for the extension of the electrical installations the following arrangements were installed :

- a complete fire alarm
- an extended camera surveillance
- a general lighting installation
- a complete broadcast system
- a no-break emergency generator
