

Please find herewith report of the lifeboat of Boulogne out of the water on 11 December 2013 was all the time in the water of Boulogne .

PRESIDENT JACQUES HURET SNS076 setting dry at 0830 hours release at 5 p.m. efficiency of the system by ultra sounds 'HARSONIC '.

The last refit of the vessel had been made may 17, 2013.

The HARSONIC system has been in service late May.

We found when dry that this system was very effective (see attached photos) no concretion or shell on metal parts.

The hull was clean, only the front part near the stem was covered in algae.

After cleaning the Jet high pressure, the vessel was handed to the water without applying a layer of antifouling.

Following this experience and finding we can confirm that this system is very effective on the boat any time.
