

Plug & Play – It's electrifying

In this day and age power outlets tend to determine where we can sit and work and/or result in undesirable cable situations. Let's change that. Plug & Play is a modular wiring system that lets you create dynamic and adaptable power grids by placing and connecting access hubs with flexible cords. When the time comes, changing and/or expanding the grids is effortless (you'll probably have a harder time moving the furniture around).
