POTATO POT

Nathalie Kvist

The wide range of supplies that we are offered today, is not only easy to access, it has also become a demand to be so. With the system we have today, we usually don't know the process or the life cycle of the products we buy, and we don't really "have to".

I wanted to bring a food process into the home, that will make people more engaged in food and also more attached to the process.

Potatoes are one of Europe's most important nutritious foods, it's simple to grow but includes many, often messy steps.

Project Potato Pot, consist out of three parts and are all designed to simplify the process of growing potatoes at home.
