

**Step 1**

Unscrew the three screw holding the potentiometer in the pedal and take out the potentiometer from the pedal. Be aware of the orientation of the gear on the potentiometer.

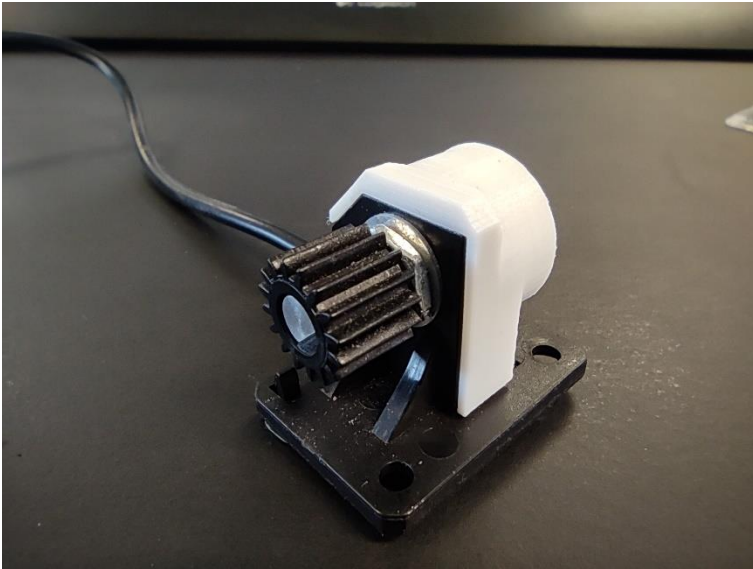

**Step 2**

Be aware of the wires on the potentiometer as the 3D printed cover reaches all the way into the potentiometer print. If necessary, move the wires away from the potentiometer housing.

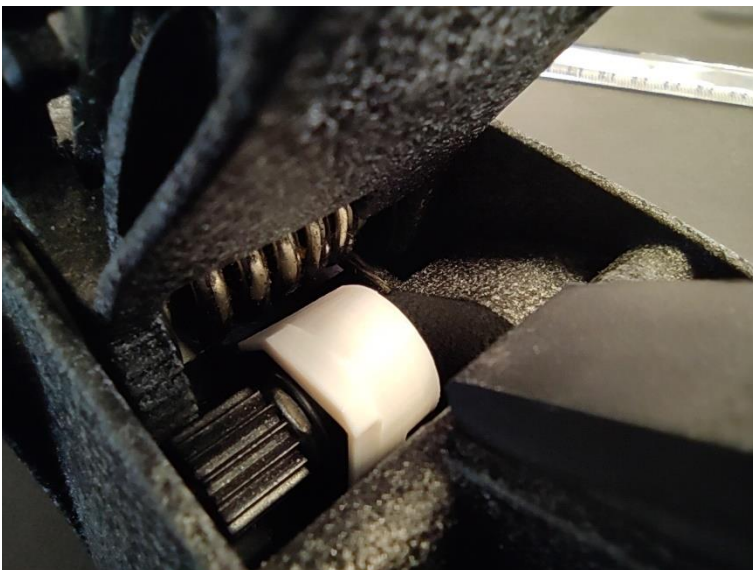

**Step 3**

Press the 3D printed cover onto the potentiometer.

**Step 4**

Remount the potentiometer in the pedal, being aware that the gear is oriented in the same way as when unmounted.

It might be necessary to recalibrate the pedal.

**Step 5**

You are ready to go – enjoy!
