

Problems that SpacInvader can solve

Cargo comes in many shapes and sizes. A lot of it, as shown below, can be stacked better and more securely with SpacInvader. The pallet rack protects fragile and unsecured cargo by dividing and double stacking it. That means reduced breakage during transportation and in storage, as well as more efficient loading and unloading of trucks.

No more unstackable goods

No more time-consuming loading, unloading and breakage during transportation

No more breakage

No more unstackable goods

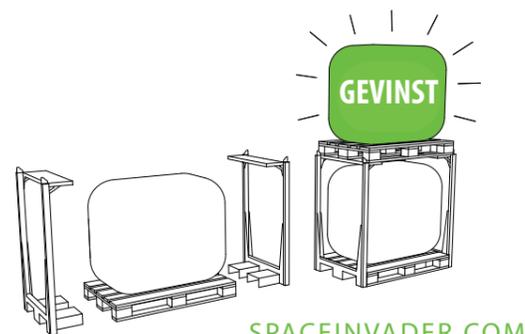

No more empty space on transport

No more low pallet heights

No more low pallets that take up space on the floor and in transport

Optimizes many kinds of cargo

SpaceInvader can be used to stack and carry longer items that do not fit on a single pallet and goods usually unstackable due to their fragility and odd size. The racks also work with double stacking in cold storage.

Optimizes both retail and warehouse environments

SpaceInvader can be used to solve warehousing needs and in a retail environment. The rack is a flexible storage solution for quick and easy movement pallets, as well as storing semi-finished items during the production process. In retail, double stacking pallets makes for a more efficient and ergonomic replenishment of stock, as well as optimised storage space.

SpaceInvader secures transport of high loaded pallets

SpaceInvader optimizes various pallet heights. Here is seen pallet heights of 80 120 160 cm.
