

Lovibond® Colour Measurement Tintometer® Group

Model Fx

Laboratory spectrophotometer optimized for analysis of edible oils

- Improve site-to-site comparability of results with controlled sample temperature
- Avoid sample solidification with the integrated heater
- Ensure measurement accuracy with easy to clean, removable sample chamber
- Save benchtop space in your QC laboratory with smaller instrument footprint

Part Number: 169200

Guaranteed Temperature Consistency

The Lovibond® Model Fx solves the temperature problems associated with consistently measuring the color of edible oils and addresses the need for quickly delivering accurate results. If samples are not properly prepared prior to measurement, turbidity caused by the crystallization of the samples will lead to inconsistent readings. The integrated sample cell heater ensures consistent and uniform temperature throughout the sample resulting in accurate measurements.

Optimized for Production Environment

Reliable and repeatable test results are key to ensuring final product quality and minimize production costs. Speed of analysis is vital for efficient process control. Simplicity of operation helps reduce errors and increase productivity. The instrument's aluminum housing is chemical resistant and intended to withstand the hazards of the production environment.

Save Costs, Misinterpretation and Potential Disputes

Suppliers and buyers need a common language to communicate and determine product quality. The Lovibond® Model Fx automatically reports key measurements to ensure that data is collected in a consistent manner and is reproducible by different users or across multiple sites. Should disagreement occur between supplier and customer, this additional information can help resolve any dispute, saving time and costs.

Ensures Compliance to Standards

The Lovibond® Model Fx measures color according to the Lovibond® RYBN, Lovibond® RY10:1, AOCS Tintometer® RY, Chlorophyll & Beta-Carotene scales which are commonly used in the Edible Oil Industry. The accuracy, repeatability and reproducibility of data provided by

the instrument allows for tighter color specifications and greater color consistency, giving companies the confidence needed to make important decisions regarding high value commodities and refining operations.
