# **PATLITE**®

NE-24A

NE-M1A

NE-IL

#### Notice to Customer

Thank you very much for purchasing our PATLITE products.

- Request the installation and wiring be performed by a professional contractor if construction work is involved.
- Prior to installation, read this manual thoroughly before using this product to ensure correct use.
- If there are any questions concerning this product, refer to the contact information at the end of this document and contact your nearest PATLITE Sales Representative.

#### To the Contractor

Read this manual carefully prior to installation.

Read this manual carefully phot to installation.
 Be sure to return this manual to the customer.

#### **Safety Precautions**

The safety precautions that should always be followed in order to prevent injury to user or other individuals as well as prevent damage to property are described below.

The level of injury or damage caused by ignoring these safety precautions and using the product improperly is categorized and described below.

**AWarning** This icon indicates an action with the potential to cause death or serious injury.

Caution

This icon indicates an action with the potential to cause injury, physical loss or damage.

## A Warning

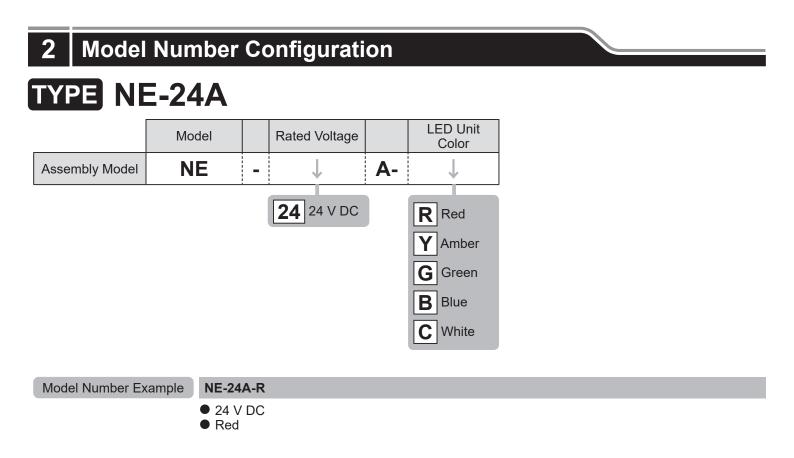

- To prevent from short-circuits or damage, observe the following:
- Be sure the power is disconnected before replacement or repair, including the replacement of the fuse.
- Use this product in a properly maintained condition. (Replace or repair if the globe, case, etc. are damaged.)
- If installing this product requires construction work, ask a specialist in order to avoid fire, or personal injury.
- When this product is used for security purposes, it should be inspected daily. In case a malfunction should occur, it is recommended that you use this product together with other security products.
- After installation, do not use this product to climb up onto the equipment with. Failure to comply will result in product damage and/or falling off the machinery.

#### **≜**Caution

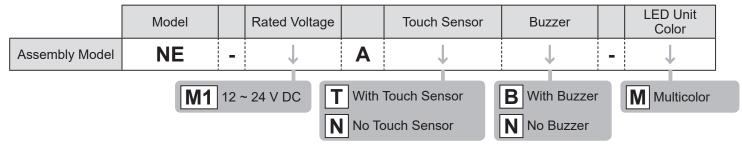

- Be sure to put a fuse in the wiring circuit between the power source and equipment for protection. If a fuse is not added, it may result in product and/or equipment failure.
- Be sure to prevent electrostatic damage due to discharge when working with this product for wiring, exchanging units, setting up parameters, etc. by discharging static electricity on your body, etc.
- Do not disassemble or detach during operation.
- Do not push on any internal parts when wiring or removing and installing the globe.

#### Notice

- To ensure proper safety while using the signal tower, observe the following:
  - Perform periodic pre-maintenance.
  - As a precaution against problems occurring, use this product together with other equipment.
- Be sure to prevent electrostatic damage due to discharge when working with this product for wiring, exchanging units, setting up parameters, etc. by discharging static electricity on your body, etc.
   (To provent damage from static electricity touch hands or other body parts to metals or on earth ground to discharging.)
- (To prevent damage from static electricity, touch hands or other body parts to metals or an earth ground to discharge the body from static charge.)
- Use a soft cloth moistened with water to clean the globe or case.
- (Do not use thinner, benzine, gasoline or oil.)
- To ensure safety when this product is installed onto equipment, observe the following:
- Do not remove parts beyond those designed to be removed from this product.
- · Do not modify or disassemble this product.
- Use only the specified replacement parts listed in this document.

Unit: mm

#### **A**Caution

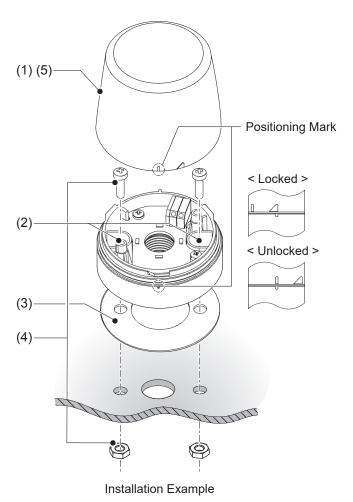

- This product is for indoor use only. (Do not use it outdoors.)
- Do not leave the product, or use it without globe installed.
- Do not apply excessive force when mounting/removing the globe. Failure to comply will result in damage.
- When removing and installing the globe again, check that there is no gap between the globe and case.
- A gap may result in parts falling in or water ingress.
  Use a soft cloth moistened with water to clean the globe or case.
- (Do not use thinner, benzine, gasoline or oil.)
- The waterproof sheet must be used before installation.
- This product has a 1mm thick waterproof sheet at the bottom of the case. However, because installation surface unevenness may cause a lack of waterproofing protection, it is recommended to apply sealant between the unit and the installation surface to maintain waterproof conditions.

#### Notice

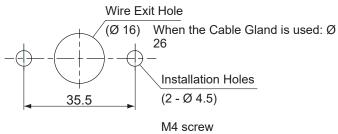

- The following requirements are necessary for proper installation:
   Install the signal beacon where excessive vibration is not present.
  - Install the signal beacon on a sturdy surface.
- Install the signal beacon on a level surface.
- When waterproofing, apply a sealing coating onto the nuts on the backside of the installation surface.
- Provide a sealant coating around the wire exit hole, or use a Cable Gland.

## TYPE NE-24A

- (1) Unlock the globe by holding and rotating it in a counterclockwise direction, then lift it up.
- (2) Punch-out the mounting holes on the case by drilling  $\emptyset$  4.5 holes from the top.
- (3) Peel off the adhesive paper from the waterproof sheet and apply it to the case.
- (4) Affix the product to the installation surface with screws and nuts. (Installation screws and nuts are not included with this product.)
- (5) After mounting the case, fit the globe by aligning the positioning marks and lock it by rotating in a clockwise.

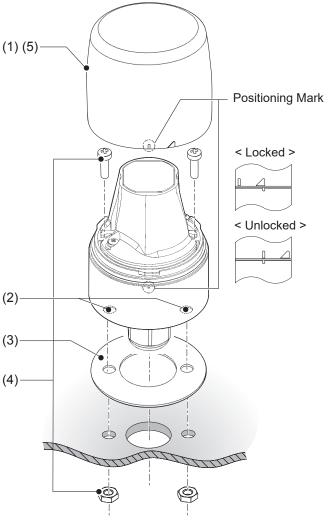

st When the Cable Gland is used, the hole must be large enough for it to fit through.

The recommended Cable Gland size is as follows: screw size: M16 × 1.5; screw length: shorter than 11 mm; outer diameter: less than 25 mm;

material: plastic. (Tightening torque : 3 N•m)

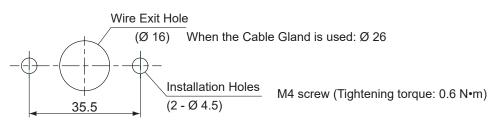

# TYPE NE-M1A

- (1) Remove the globe by unscrewing it in a counter-clockwise (1) (5) direction.
- (2) Punch-out the mounting holes on the case and buzzer case by drilling holes from the top.
- (3) Peel off the adhesive paper from the waterproof sheet and apply it to the case.
- (4) Affix the product to the installation surface with screws and nuts. (Installation screws and nuts are not included with this product.)
- (5) Set the globe with aligning the positioning mark after attaching the case, then turn the globe clockwise to lock it.

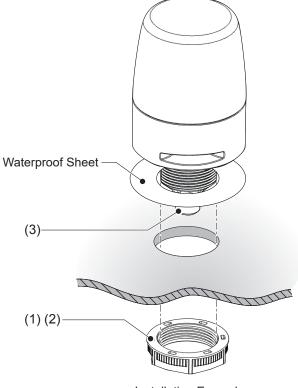

Installation Example

Installation Dimension [Unit: mm]

- (1) Remove the M30 nut.
- (2) Fix on the mounting surface with the M30 nut.
- (3) Connect the M12 cable to the M12 Connector.

Installation Example

Installation Dimension [Unit: mm]

(Ø 31) (Tightening torque: 4.5 N•m)

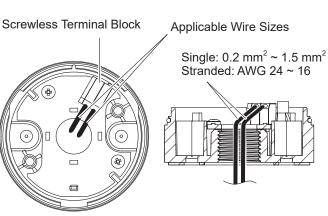

<NE-IL B-M Model>

#### **≜**Caution

- Make sure the power is OFF before wiring. A short circuit may damage internal circuits.
- Ensure the proper working voltage is used. Improper voltage wll damage internal crcuits.
- When wring, do not pull on the wires or force them into buzzer housing.
- Be sure the wiring is done properly. Any mistake in wiring may result in damage.
- Be sure to put a fuse in the wiring circuit between the power source and equipment for protection.
- If a fuse is not added, it may result in product and/or equipment failure.

## TYPE NE-24A

- (1) Remove the globe by unscrewing it in a counterclockwise direction.
- (2) Connect the wires to the screwless terminal block.
- (3) Attach the globe by screwing it in a clockwise direction.
- \* The terminals have no polarity.

#### Wiring Example

Lever

#### Screwless Terminal Block wiring method

- (1) A minus driver etc. is used to pry the lever slot of the Terminal Block open, by pushing straight onto the lever slot.
- (2) The stripped side of the lead wire is inserted in the slot.
- (3) The driver is removed to release the lever. (Check to make sure the lead wire has been locked in place.)
- Strip 8 mm of wire insulation from the wire to insert it in the Terminal Block.
- The minus driver blade should be at about 2 mm by 0.5 mm in size.

#### **∧**Caution

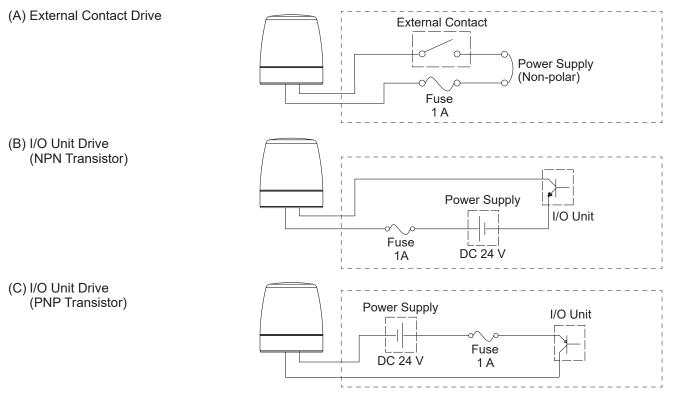

Do not apply excess force to the screwless terminal block during wiring. Doing so may cause damage.

#### Notice

Make sure that there is no slack in the internal wiring.
 Wiring hanging over the LED may cause a reduction in luminous intensity.

## TYPE NE-24A

Wiring examples vary depending on the driving method.

<NE-IL B-M Model>

## 6 Using the LED and Buzzer

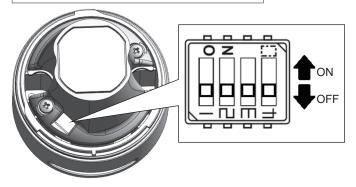

## TYPE NE-M1A

The LED light color and buzzer sound pattern can be set by removing the globe and adjusting the DIP switches. For touch sensor specifications, the touch sensor input switching can be set.

#### **A**Caution

- Do not use excess force when performing operations. Failure to comply will result in damage due to breakage or deformation.
- Do not use sharp-pointed objects to perform operations. Failure to comply may result in damage and inoperative switches or hinder contact between contact parts.

Top view of product (with globe removed)

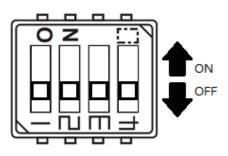

#### Using the NE-M1A

This product is able to use a signal wire to control the LED and buzzer. Each setting is adjusted using the setting DIP switches. NE-M1ATB can also be controlled with a touch sensor.

#### About DIP Switches

Settings can be changed as shown in the following tables. (All OFF as factory default settings)

| NE-M1ATB | Switch 1                | Switch 2                              | Switch 3              | Switch 4                |
|----------|-------------------------|---------------------------------------|-----------------------|-------------------------|
| Function | Buzzer Pattern Settings | Change Touch Sensor<br>Input Settings | Change Touch Sensor I | nput LED Color Settings |

| NE-M1ANB | Switch 1                | Switch 2 | Switch 3 | Switch 4 |
|----------|-------------------------|----------|----------|----------|
| Function | Buzzer Pattern Settings | Not used | Not used | Not used |

#### Buzzer Pattern Settings

Change the buzzer pattern as shown in the following table.

| Switch Position | OFF                                    | ON                    |
|-----------------|--|-----------------------|
| Buzzer Pattern  | Rapid intermittent beep<br>(call sign) | Continuous beep sound |

#### Change Touch Sensor Input Settings

Change the operation of the touch sensor when it is touched as shown in the following table.

| Switch Position | OFF                 | ON               |
|-----------------|---------------------|------------------|
| Input Setting   | Momentary operation | Toggle operation |

#### Change Touch Sensor Input Settings

Change the operation of the touch sensor when it is touched as shown in the following table.

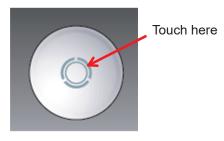

| Switch Position<br>LED Color | Switch 3 | Switch 4 |
|------------------------------|----------|----------|
| OFF                          | OFF      | OFF      |
| Red                          | ON       | OFF      |
| Blue                         | OFF      | ON       |
| White                        | ON       | ON       |

- E.g. 1) If momentary operation and a red color LED have been set, touching the touch sensor will light up in red, regardless of the color that the LED is being controlled with the signal wire (or if it is off).
- E.g. 2) If toggle operation and LED off have been set, touching the touch sensor once will turn the LED off, regardless of the color that the LED is being controlled with the signal wire. The LED will remain off until touching the light again, even if the condition of the signal wire has been changed.

| Notice  |
|---|
| Always move your hand away from the touch sensor after changing the DIP Switch. |

#### About the Touch Sensor

To turn the touch sensor to ON, touch the following symbol on the top of the globe with the middle of your finger or palm of your hand. The response time of the touch sensor is 100 ms.

#### **A**Caution

• Do not hit or press the touch sensor with excess force. Doing so may result in damage to the product.

#### Notice

• The touch sensor may not respond if you touch the sensor too slowly.

• Touching continuously for 60 seconds is considered an incorrect operation, and the condition when touched is forcibly canceled. The light will respond by releasing your hand from the globe and touching it again.

#### Using the NE-IL

This product is an IO-Link compliant product. Follow the instructions for wiring up "5 Wiring "(P. 15).

The IO-Link master can control the LED and the buzzer. The functions that can be used differs depending on the product. Available functions are shown in the following table.

| Function           | NE-ILNN | NE-ILNB | NE-ILTN | NE-ILTB | NE-ILXB |
|--------------------|---------|---------|---------|---------|---------|
| Touch Sensor Input | _       | _       | 0       | 0       | 0       |
| Analog Input       | _       | _       | _       | _       | 0       |
| Digital Input      | _       | _       | _       | _       | 0       |

Changing the "Operating Mode" settings enables operation in the following modes: • Color Specification Mode

- Level Mode
- Analog Input Mode (NE-ILXB only)
- Digital Input Mode (NE-ILXB only)

The parameters used in each mode are shown in the following table. Refer to "Common Items for Each Mode" (P. 23) for common items.

| Mode                               | Color Specification | Level      | Analog Input | Digital Input |

\* 3.2mA ~ 4 mA (-25 ~ 0) / 4 mA ~ 20 mA (0 ~ 500) / 20 mA ~ 21 mA (500 ~ 531)

#### Color Specification Mode

In this mode, LED and buzzer details are specified for control.

Other settings are specified using the parameters.

Send the processed data by referring to the table below.

|        | bit7           | bit6 | bit5 | bit5 bit4 |          | bit2 bit1        |  | bit2 bit1          |  | bit2 bit1 |  | bit2 bit1 |  | bit3 bit2 bi |  | bit0 |
|--------|----------------|------|------|-----------|----------|------------------|--|--------------------|--|-----------|--|-----------|--|--------------|--|------|
| Byte 0 | LED Pattern    |      |      |           | Not used | t used LED Color |  |                    |  |           |  |           |  |              |  |      |
| Byte 1 | Buzzer Pattern |      |      |           |          | Not used         |  | Buzzer<br>ON / OFF |  |           |  |           |  |              |  |      |

#### Level Mode

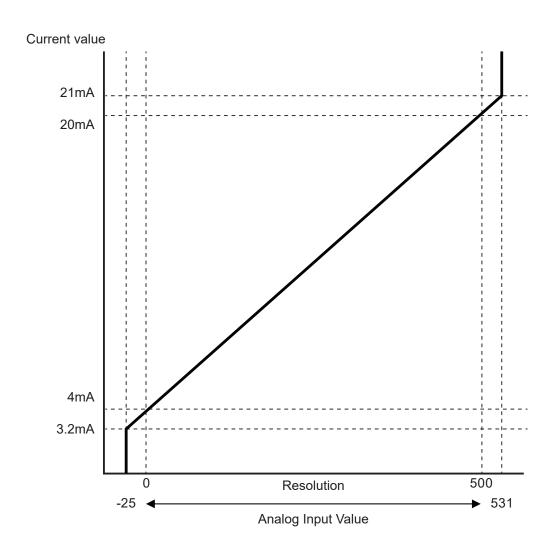

In this mode, LED and buzzer details are set using the parameters, and controlled with the values of the processed data. Send the processed data by referring to the table below.

|        | bit7 | bit6  | bit5 | bit4 | bit3 | bit2 | bit1 | bit0 |  |  |
|--------|------|---|------|------|------|------|------|------|--|--|
| Byte 0 |      | Analog value (Lower 8 bits of total 9 bits) |      |      |      |      |      |      |  |  |
| Byte 1 |      | Not used                                    |      |      |      |      |      |      |  |  |

\* Values from 0 (0x000) to 500 (0x1F4) can be entered as analog values.

Refer to "Analog Control Examples)" (P. 22) for an example of control using Analog Input Mode.

Analog Input Mode
 In this mode, LED and buzzer control uses analog input values without using processed data.
 Settings are specified using the parameters.
 Refer to the following image for values used for analog input.

#### Analog Control Examples)

|  |    | byte |     |     |     |     |     |     |     |     |           |
|--|----|------|-----|-----|-----|-----|-----|-----|-----|-----|-----------|
|  | 1  | 2    | 3   | 4   | 5   | 6   | 7   | 8   | 9   | 10  | 11        |
| index 2010: Analog Input Value Threshold | 50 | 100  | 150 | 200 | 250 | 300 | 350 | 400 | 450 | 475 | $\square$ |
| index 2011 Analog Input LED Color        | 4  | 4    | 4   | 2   | 2   | 2   | 3   | 3   | 3   | 1   | 0         |
| index 2012 Analog Input LED Pattern      | 1  | 2    | 0   | 1   | 2   | 0   | 1   | 2   | 0   | 3   | 0         |
| index 2013 Analog Input Buzzer Pattern   | 0  | 0    | 0   | 0   | 0   | 0   | 0   | 0   | 0   | 3   | 0         |

For Index2010 enter a value that is larger than the value specified by the lower byte. If 0 is specified, the parameter for that byte will be ignored.

byte11 does not exist for Index2010, but specifying it for Index2011 to 2013 specifies the operation up to set the threshold value for byte1 from default conditions.

| Analog Input Value | LED Color | LED Pattern           | Buzzer Pattern |
|--------------------|-----------|-----------------------|----------------|
| 49                 | OFF       | Lit                   | Buzzer 0 (OFF) |
| 50 - 99            | Blue      | 1 sec. Flash (Slow)   | Buzzer 0 (OFF) |
| 100 - 149          | Blue      | 500 ms Flash (Medium) | Buzzer 0 (OFF) |
| 150 - 199          | Blue      | Lit                   | Buzzer 0 (OFF) |
| 200 - 249          | Green     | 1 sec. Flash (Slow)   | Buzzer 0 (OFF) |
| 250 - 299          | Green     | 500 ms Flash (Medium) | Buzzer 0 (OFF) |
| 300 - 349          | Green     | Lit                   | Buzzer 0 (OFF) |
| 350 - 399          | Yellow    | 1 sec. Flash (Slow)   | Buzzer 0 (OFF) |
| 400 - 449          | Yellow    | 500 ms Flash (Medium) | Buzzer 0 (OFF) |
| 450 - 474          | Yellow    | Lit                   | Buzzer 0 (OFF) |
| 475                | Red       | 250 ms Flash (Fast)   | Buzzer 3       |

Due to variations in the analog input value, the value specified for Index2010 is the threshold value, and hysteresis is specified to 20 for the downward direction. Note that if the specified threshold value is 20 or less, the hysteresis is 1.

Digital Input Mode

In this mode, LED and buzzer control uses digital input values without using processed data. Settings are specified using the parameters.

#### Common Items for Each Mode

About LED Colors The "LED Color" used in each mode is shown in the following table.

| Color  | Setting |
|--------|---------|
| OFF    | 0       |
| Red    | 1       |
| Green  | 2       |
| Yellow | 3       |
| Blue   | 4       |
| Purple | 5       |
| Cyan   | 6       |
| White  | 7       |

About LED Patterns The "LED Pattern" used in each mode is shown in the following table.

| Pattern               | Sotting  |         |
|-----------------------|----------|---------|
| Name                  | Interval | Setting |
| Lit                   | -        | 0       |
| 1 sec. Flash (Slow)   | 500 ms   | 1       |
| 500 ms Flash (Medium) | 250 ms   | 2       |
| 250 ms Flash (Fast)   | 125 ms   | 3       |
| Single Flash          | 500 ms   | 4       |
| Double Flash          | 500 ms   | 5       |
| Triple Flash          | 500 ms   | 6       |
| Sine Curve (slow)     | 6 s      | 7       |
| Sine Curve (fast)     | 3 s      | 8       |

About Buzzer Patterns The "Buzzer Pattern" used in each mode is shown in the following table.

| Pattern Name   | Setting |
|--|---------|
| Silent   | 0       |
| Continuous beep sound                                    | 1       |
| Rapid intermittent beep (call sign)                      | 2       |
| Rapid hi-low   | 3       |
| Sweep sound  | 4       |
| Continuous beep sound 500ms ON / 500ms OFF               | 5       |
| Rapid intermittent beep (call sign) 500ms ON / 500ms OFF | 6       |
| Rapid hi-low 500ms ON / 500ms OFF                        | 7       |
| Sweep sound 500ms ON / 500ms OFF                         | 8       |

About the Touch Sensor Refer to "About the Touch Sensor" (P. 18) for the NE-M1A.

# TYPE NE-24A

Troubleshoot problems that occur by following the instructions in the table below.

| No. | Problem                 | Confirmation  | Remedy  |
|-----|-------------------------|---|---|
|     |                         | Has the wiring been connected properly?                       | Wire the LED again while referring to the instructions in " S Wiring " (P. 12). |
| 1   | The LED does not light. | Is the power source supplying the proper voltage and current? | Use the appropriate voltage.  |
|     |                         | Has the fuse blown?   | Replace the fuse if it has blown.   |

## TYPE NE-M1A

Troubleshoot problems that occur by following the instructions in the table below.

| No. | Problem  | Confirmation  | Remedy   |
|-----|--|---|--|
|     |  | Has the wiring been connected properly?                       | Wire the LED again while referring to the instructions in " <b>5</b> Wiring " (P. 12).   |
|     |  | Is the power source supplying the proper voltage and current? | Use the appropriate voltage.   |
| 1   | The LED does not light.                                      | Has the fuse blown?   | Replace the fuse if it has blown.  |
|     |  | Is touch sensor input being used?                             | Check " G Using the LED and Buzzer"<br>(P. 16). For products with T in the model<br>name, the touch sensor input has priority<br>out of touch sensor input and signal wire<br>input. |
|     |  | Has the wiring been connected properly?                       | Wire the LED again while referring to the instructions in " <b>5</b> Wiring " (P. 12).   |
| 2   | 2 The color of the LED<br>differs from the desired<br>color. | Is touch sensor input being used?                             | Check " G Using the LED and Buzzer"<br>(P. 16). For products with T in the model<br>name, the touch sensor input has priority<br>out of touch sensor input and signal wire<br>input. |
| 2   | 3 The LED does not flash.                                    | Has the wiring been connected properly?                       | Wire the LED again while referring to the instructions in " <b>5</b> Wiring " (P. 12).   |
| 3   |  | Check the product model.                                      | Products with <b>I</b> in the model name do not have a flash function.   |
|     |  | Has the wiring been connected properly?                       | Wire the LED again while referring to the instructions in " <b>5</b> Wiring " (P. 12).   |
| 4   | The buzzer does not  | Is the power source supplying the proper voltage and current? | Use the appropriate voltage.   |
|     | sound.   | Has the fuse blown?   | Replace the fuse if it has blown.  |
|     |  | Check the product model.                                      | Only products with <b>B</b> in the model name have a buzzer function.  |
|     |  | Has the wiring been connected properly?                       | Wire the LED again while referring to the instructions in " <b>5</b> Wiring " (P. 12).   |
|     |  | Is the power source supplying the proper voltage and current? | Use the appropriate voltage.   |
| 5   | The touch sensor does not respond                            | Has the fuse blown?   | Replace the fuse if it has blown.  |
|     |  | Are you touching the sensor too slowly?                       | The touch sensor may not respond if you touch the sensor too slowly.   |
|     |  | Check the product model.                                      | Only products with <b>I</b> in the model name have a touch sensor function.  |

# TYPE NE-IL

Troubleshoot problems that occur by following the instructions in the table below.

| No. | Problem  | Confirmation  | Remedy   |  |
|-----|--|---|--|--|
|     |  | Is the processing data correct?                               | Refer to the instructions in " G Using the LED and Buzzer " (P. 16), and resend the processing data. |  |
| 1   | The LED does not light.                          | Is the specified value correct?                               | Check " G Using the LED and Buzzer"<br>(P. 16) and set the specified value.                          |  |
|     |  | Has the wiring been connected properly?                       | Wire the LED again while referring to the instructions in " <b>5</b> Wiring " (P. 12).               |  |
|     |  | Is the power source supplying the proper voltage and current? | Check whether the connected IO-Link is putting out the proper voltage.                               |  |
| 2   | The color of the LED<br>differs from the desired | Is the processing data correct?                               | Refer to the instructions in " G Using the LED and Buzzer " (P. 16), and resend the processing data. |  |
|     | color.   | Is the specified value correct?                               | Check " G Using the LED and Buzzer"<br>(P. 16) and set the specified value.                          |  |
|     | <sup>3</sup> The buzzer does not sound.          | Is the processing data correct?                               | Refer to the instructions in " G Using the LED and Buzzer " (P. 16), and resend the processing data. |  |
| 3   |  | Is the specified value correct?                               | Check " G Using the LED and Buzzer"<br>(P. 16) and set the specified value.                          |  |
|     |  | Has the wiring been connected properly?                       | Wire the LED again while referring to the instructions in " <b>5</b> Wiring " (P. 12).               |  |
|     |  | Is the power source supplying the proper voltage and current? | Check whether the connected IO-Link is putting out the proper voltage.                               |  |
|     |  | Has the wiring been connected properly?                       | Wire the LED again while referring to the instructions in " <b>5</b> Wiring " (P. 12).               |  |
|     | 4 The touch sensor does not respond              | Is the power source supplying the proper voltage and current? |  | Check whether the connected IO-Link is putting out the proper voltage. |
| 4   |  | Are you touching the sensor too slowly?                       | The touch sensor may not respond if you touch the sensor too slowly.                                 |  |
|     |  | Is the specified value correct?                               | Check " G Using the LED and Buzzer"<br>(P. 16) and set the specified value.                          |  |
|     |  | Check the product model.                                      | Only products with <b>I</b> in the model name have a touch sensor function.                          |  |
