

# 3D Dino Template

1. Print dino out on to light weight card.
2. Colour in dino
3. Cut out along the black solid lines
4. Fold along dashed lines
5. Stick tab 1 (up to the first dashed line) under the tab on the other side of the head
6. Stick both tab 2s to the head, in between the nose bump and the eye
7. Stick both tabs 3 to the underside of the jaw. Your head should be one complete 'block'.
8. Fold tab 4 in on itself and stick to the opposite body section.
9. Stick the larger tab 5 to the inside of the body, just above the tail and stick the smaller tab 5 to the back of the body, just at the base of the 'neck'.
10. Feed the arms in between the top belly flap (just above tab 4) and the side body sections.
11. Stick the outside section of tab1 to the back of the neck, so there is no gap between the head and the body.
12. Finally, bend the tail out slightly where it joins the body and stand. Adjust the tail bend until the dino is stable - it acts as a counterbalance to the rest of the dino's body.
