## Finance Department

<div>Gearing</div>	<p>Gearing is the amount of debt – in proportion to equity capital – that a company uses to fund its operations.</p> <p>A company that possesses a high gearing ratio/ is highly geared shows a high debt to equity ratio. This potentially increases the risk of...</p> <ul style="list-style-type: none"> <li>- financial insecurity for the business - high interests have to be paid even when there is no profit, and loans and debentures need to be repaid</li> <li>- Banks and shareholders being reluctant to invest in the business.</li> </ul>	<div>Internal Finance</div>	<p>Finances from the business itself.</p>
<div>Start-up Capital</div>	<p>The finance required by a new business to pay for the essential fixed assets and current assets so that it can start trading.</p>	<div>External Finance</div>	<p>Finance from sources outside of and separate from the business.</p>
<div>Working Capital</div>	<p>Capital available to a business in the short term to pay for day-to-day expenses.</p> <p>current assets — current liabilities</p> <p>Current liabilities include: paying invoices, buying raw materials, paying wages/ salaries, paying rent, repayment of short-term debt, paying utilities etc.</p>	<div>Micro-Finance</div>	<p>Money gained from a financial service that lends to small businesses, individuals and entrepreneurs, who cannot raise finances through traditional banking services.</p> <ul style="list-style-type: none"> <li>• very small amounts borrowed</li> <li>• available to poorer groups in society</li> <li>• may be nowhere else to borrow from</li> <li>• no security required</li> <li>• interest paid</li> </ul>
<div>Capital Expenditure</div>	<p>The money spend on non-current assets (fixed assets) lasting more than one year.</p>	<div>Short-term Sources of Finance</div>	<p>Finances that must be paid back within a year and includes: overdraft facility, trade credits, factoring.</p>
<div>Revenue Expenditure</div>	<p>Money spent on day-to-day expenditure, e.g. wages, raw materials.</p>	<div>Long-term Sources of Finance</div>	<p>Funding for over a year and includes: owner's savings/share capital; retained profits; loans; debentures; a mortgage; hire purchase or leasing; grants.</p>

Business Finance	<p>Needed for: starting up a business; expansion of an existing business; and increasing working capital.</p> <p>Factors when considering sources:</p> <ul style="list-style-type: none"> <li>• the amount required</li> <li>• size and type of business organisation</li> <li>• control over the business</li> <li>• risk and gearing (if it already has loans)</li> <li>• the purpose and period of time required.</li> </ul>	Selling Debentures	<p>Issued by both businesses and governments as a way of raising funds. It is a loan that is not secured on anything except the general credit-worthiness of the organisation that issues them.</p> <ul style="list-style-type: none"> <li>• Raises long-term finance (e.g. 25 years)</li> <li>• gets repaid with interest</li> </ul>
Bank Loans (long term)	<ul style="list-style-type: none"> <li>• Usually quick to arrange</li> <li>• Varying repayment period</li> <li>• Large companies pay a low rate of interest (financial economies of scale)</li> <li>• Interest must be paid</li> <li>• Security/collateral is often required</li> </ul>	Grants and Subsidies	<ul style="list-style-type: none"> <li>• Government grants are not repaid</li> <li>• the money may have conditions attached, such as where the business must be located etc.</li> </ul>
Issue of Shares	<p>Limited companies can issue shares to raise funds.</p> <ul style="list-style-type: none"> <li>• Do not have to be repaid</li> <li>• Can raise co. profile</li> <li>• No interest paid</li> <li>• Dividends expected</li> <li>• Ownership could change hands</li> <li>• Shareholders decide who runs the company</li> <li>• Only used by companies</li> <li>• PLCs: can issue to friends and family only</li> <li>• Ltds: can float on stock exchange and sell to anyone.</li> </ul>	Overdraft	<ul style="list-style-type: none"> <li>• repayable within the year</li> <li>• security not usually required</li> <li>• interest only paid on amount borrowed</li> <li>• flexible form of borrowing</li> <li>• cheaper than loans in short run</li> <li>• more expensive than loans over long term</li> <li>• often repayable on demand</li> <li>• interest rate higher than bank loan</li> <li>• may be refused one until business is established</li> </ul>
Leasing (long term)	<ul style="list-style-type: none"> <li>• large cash outlay not required to purchase asset</li> <li>• maintenance paid for by leasing company</li> <li>• total payment higher than purchase price of the asset</li> </ul>	Factoring Debt	<p><b>Selling outstanding invoices (money owed by customers to the business) to another company at a discounted amount.</b></p> <ul style="list-style-type: none"> <li>• Immediate cash</li> <li>• no risk of debt not being repaid</li> <li>• receive less than the full amount of debt</li> </ul>
Hire Purchase (long term)	<ul style="list-style-type: none"> <li>• large cash outlay not required to purchase asset</li> <li>• interest paid</li> <li>• asset not owned until last payment made</li> <li>• may require a deposit</li> </ul>	Trade Credit	<p><b>Buying from a supplier, but paying for the items later.</b></p> <ul style="list-style-type: none"> <li>• If first year of business supply may say no</li> <li>• Interest free, but may be charged higher price</li> <li>• Needs to be repaid, ideally on time, otherwise future goods will not be supplied, and a company remains liable for what it has already received. None payment of goods can lead to bankruptcy.</li> <li>• Will not run out of products to sell</li> <li>• Can sell finished items before raising the money to fund the raw materials.</li> </ul>

<div>Sale of Inventories</div>	<ul style="list-style-type: none"><li>• reduces storage costs</li><li>• less capital tied up in inventories</li><li>• if inventories are too low customers disappointed as demand not quickly satisfied</li></ul>	<div>Cash Inflows</div>	<p>Sum of money received by a business during a time period.</p> <p>From:</p> <ul style="list-style-type: none"><li>• Sales of products</li><li>• sale of assets</li><li>• borrowed money, e.g. loans etc.</li><li>• investors' money</li></ul>
<div>Retained Profit</div>	<ul style="list-style-type: none"><li>• Not available to start-ups and new businesses</li><li>• Quick, cheap and easy to access</li><li>• Opportunity cost if spent - not available for other things</li><li>• Not repaid</li><li>• No interest to pay</li><li>• limited amount available</li></ul>	<div>Profit</div>	<p>Surplus after total costs have been subtracted from sales revenue.</p>
<div>Sale of Existing Assets</div>	<ul style="list-style-type: none"><li>• better use of assets</li><li>• debts not increased</li><li>• it takes time to sell assets</li><li>• may not have spare assets to sell</li></ul>	<div>Opening Cash (or bank) Balance</div>	<p>Amount of cash held by the business at the start of the month.</p>
<div>Sole Trader/ Partnership/ Owners' Savings</div>	<ul style="list-style-type: none"><li>• no complicated paper work</li><li>• available quickly</li><li>• no interest paid, so cheaper than a loan</li><li>• may not be sufficient</li><li>• opportunity cost for owner</li></ul>	<div>Net Cash Flow</div>	<p>Difference, each month, between the inflows and the outflows.</p>
<div>Cash Flow</div>	<p>Cash inflows/outflows over a period of time.</p> <p><b>Cash flow cycle:</b> shows the movement of money in and out of the business.</p> <p>Problems:</p> <ul style="list-style-type: none"><li>• too little cash - cannot pay bills, production will stop, forced into liquidation</li></ul>	<div>Closing Cash (or bank) Balance</div>	<p>Amount of cash held by the business at the end of each month. This becomes the opening cash balance for the next month.</p>

Cash Outflows	<p>Sums of money paid out by a business during period of time.</p> <p>From:</p> <ul style="list-style-type: none"><li>• purchasing goods/components/raw materials using cash</li><li>• paying bills, e.g. wages</li><li>• purchasing fixed assets</li><li>• repaying loans</li><li>• paying creditors</li></ul>	Income Statements/ Profit and Loss Statement	<p>Document that records income and all costs of a business incurred in earning that income over a certain period of time. Required by law for companies, and need to be accurate and up to date.</p> <ul style="list-style-type: none"><li>• show if business has made a profit/loss</li><li>• judge if cost of sales has risen/fallen</li><li>• judge if expenses need reducing</li><li>• see how much retained profit is available</li><li>• see how available for dividends/drawings</li><li>• can compare year on year and with other companies.</li><li>• can manage finances.</li></ul>
Cashflow Forecasts	<p>Estimates of future cash inflows/outflows of a business, usually on a monthly basis, showing the expected cash balance at the end of the month.</p> <p>Used:</p> <ul style="list-style-type: none"><li>• when starting a new business</li><li>• to obtain bank loan or overdraft</li><li>• manage cash flow and avoid running out of money</li><li>• reduce need for overdraft</li><li>• help plan for the future</li></ul>	Gross Profit	<p>Sales revenue — cost of sales</p>
Solutions to Cash Flow Problems	<p><b>Short-term:</b></p> <ul style="list-style-type: none"><li>• delay payment to suppliers</li><li>• ask debtors to pay more quickly</li><li>• delay or cancel payment of capital equipment</li><li>• take out bank overdraft or loan.</li></ul> <p><b>Long-term</b></p> <ul style="list-style-type: none"><li>• attract new investors</li><li>• cut costs</li><li>• increase efficiency</li><li>• develop new products to attract more sales</li><li>• find ways to increase sales revenue (may increase short-term costs)</li></ul>	Net Profit	<p>Profit made after all costs have been deducted from sales revenue. Often just referred to as 'profit'.</p> <p>Gross profit — expenses</p> <p>Why important?</p> <ul style="list-style-type: none"><li>• rewards entrepreneurs</li><li>• rewards risk taking</li><li>• retained profit is a source of finance</li><li>• indicator of success</li></ul>
Accounts	<p>Financial records of a business transaction.</p> <p><b>Final accounts:</b> produced at the end of the financial year and give details of the profit/loss made over the year and how much the business is worth.</p>	Cash vs Profit	<p>Cash is not profit as you may not have been paid for all the goods you have sold, but it would still appear in your accounts as a profit made within that time period.</p>
Accountants	<p>Professionally qualified people who have responsibility for keeping accurate accounts and for producing final accounts.</p>	Depreciation	<p>The fall in value of a fixed (non-current) asset over time.</p>

Retained Profit	Net profit reinvested into a company after deducting tax and payments to owners	Capital Employed	shareholders' funds + long-term liabilities Shows the long-term and permanent capital invested in the business.
Dividends	Annual payments from company profits to shareholders.	Account Ratios	Used by: <ul style="list-style-type: none"><li>managers - for taking decisions and controlling the operations of a business</li><li>Other companies - for comparison</li><li>Investors/lenders/stakeholders - for protecting own interests</li><li>Government - to ensure proper taxes being paid</li></ul> But: <ul style="list-style-type: none"><li>not detailed accounts for external users</li><li>ratios based on past data</li><li>data over time affected by inflation</li><li>different accounting methods in different companies/countries</li></ul>
Balance Sheet	Shows the value of a business's assets and liabilities at a particular point in time and how it has been funded (shares/long-term debts). <ul style="list-style-type: none"><li>shows increase/decrease in value of business</li><li>shows if can pay short-term debts</li><li>can see how expansion has been paid for</li><li>performance using liquidity ratios</li></ul>	Net Profit Margin	$\frac{\text{net profit}}{\text{sales revenue}} \times 100\%$ If increases: gross profit higher or expenses lower. Compare year-on-year, across companies.
Assets	The items of value owned by the business. <b>Non-current (fixed):</b> kept for more than one year, e.g. land, buildings, machinery, vehicles. They lose value over time - depreciation. <b>Current:</b> only held for short periods of time, e.g. cash, inventories, accounts receivable.	Gross Profit Margin	$\frac{\text{gross profit}}{\text{sales revenue}} \times 100\%$ If increases: either prices were increased or costs of goods are cheaper. Compare year-on-year, across companies.
Liabilities	Debts owed by the business. current: debts that must be paid back within the year - bank overdrafts, accounts payable non-current: long-term debts, to be paid back after more than one year - long-term bank loan, debentures	Liquidity	The ability of a business to pay back its short-term debts.

<div>Venture Capital</div>	<p>A loan for a business from a private individual, not a bank.</p> <ul style="list-style-type: none"><li>- Venture capitalist: may wish to help run company; can offer knowledge/expertise; take on high risk businesses</li><li>- Owner: can lose some control of business; may have to give up large share of profit or business</li></ul>	<div>Financial Statements</div>	<p>Financial statements: collection of reports about an organisation's financial results, condition, and cash flows. They are used to:</p> <ul style="list-style-type: none"><li>• Determine ability to generate cash, and the sources and uses of that cash.</li><li>• Show ability to pay back debts.</li><li>• Amount of tax to be paid.</li><li>• monitor performance (both immediately and over time)</li><li>• highlight any looming profitability issues</li><li>• To derive financial ratios from the statements that can indicate the condition of the business.</li></ul> <p><b>Balance sheet, profit and loss account, cash flow statement.</b></p>
<div>Factors that Affect Source of Finance</div>	<ul style="list-style-type: none"><li>- <b>Purpose:</b> buying assets, cash flow etc.</li><li>- <b>Time-period</b></li><li>- <b>Amount needed</b></li><li>- <b>Legal form and size:</b> shares and debentures - only for limited companies. Small firms - only limited sources of finances available to them</li><li>- <b>Control:</b> issue too many new shares, the current owners may lose control of the business.</li><li>- <b>Risk- gearing:</b> new loans with pre-existing loans can increase gearing- risk of the business.</li></ul>	<div>Crowd Funding</div>	<ul style="list-style-type: none"><li>• A last resort for some who can't get any other source of finance</li><li>• Raises awareness of the business</li><li>• Raises awareness of the business finances to other businesses</li><li>• May attract advice as well as funds</li><li>• May not attract any investors, or raise enough</li><li>• Energy may be better spent pursuing another source of funding</li></ul>
<div>Acid Test Ratio</div>	<p>Shows how easily a company can pay its short-term debts, but without the least liquid asset; inventories.</p> $\frac{\text{current assets} - \text{inventories}}{\text{current liabilities}}$ <p>Similar to current ratio but can be slightly less than 1 and still be able to pay current liabilities as they fall due.</p>	<div>Return on Capital Employed (ROCE)</div>	<p>Shows how efficient a business is by looking at profit in relation to the capital used.</p> $\frac{\text{net profit}}{\text{capital employed}} \times 100\%$ <p>If increases: gross profit higher or expenses lower. Compare year-on-year, across companies.</p>
<div>Current Ratio</div>	<p>Shows how easily a company can pay its short-term debts.</p> $\frac{\text{current assets}}{\text{current liabilities}}$ <p>Above 1, and a business has sufficient funds to cover current liabilities. Below 1, then the company is in a dicey situation Above 2, a company has too much working capital, and should be making that money work harder by investing</p>	<div>Opportunity Cost</div>	<p>The next best alternative foregone</p> <p>Opportunity costs represent the potential benefits that an individual, investor, or business misses out on when choosing one alternative over another.</p>
<div>Profitability Ratios</div>	<p>A profitability ratio measures a companies' ability to generate a profit from its operations.</p> <ul style="list-style-type: none"><li>- gross/net profit margins</li><li>- return on capital employed</li><li>- (cash flow ratios)</li></ul> <p>Used to: attract investors; assess seasonal business; reveal problems in a business (e.g. increasing costs); compare company to company; compare performance over years</p>	<div>Liquidity Ratios</div>	<p>A liquidity ratio is a type of financial ratio used to determine a company's ability to pay its short-term debt obligations. The ratios helps determine if a company can use its current, or liquid, assets to cover its current liabilities.</p> <ul style="list-style-type: none"><li>- current ratio/working capital ratio</li><li>- acid test ratio</li></ul>

<div>Revenue</div>	<p><b>Revenue</b> is the income that a business has from its normal business activities, usually from the sale of goods and services to customers. Revenue is also referred to as <b>sales</b> or <b>turnover</b>.</p> <p>It is NOT profit or cash flow.</p>
