

## TRASCO® couplings

### Description

TRASCO® flexible coupling is the flexible and omocinetic coupling that assures the best performance in relation to the physical space occupied in its class.

It has a very compact design and allows safe power transmission by absorbing peak loads and torsional vibrations.

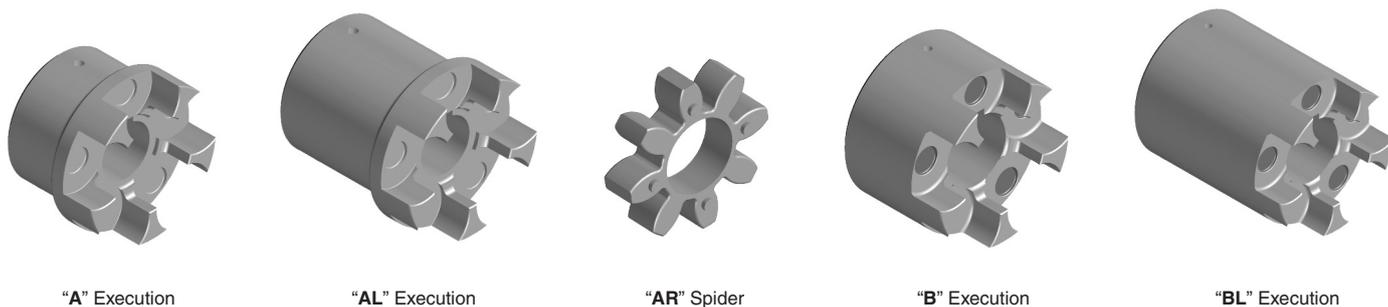

Moreover, the elastic design of the polyurethane gear ring compensates for angular and radial misalignments and also absorbs small shaft length variation.

The involute profile of the gear ring teeth prevents high stress

concentrations on reduced surfaces and the crowned profile and avoids the transmission of axial stress.

The high duty factor of TRASCO® couplings is due to the fact that the elastic element works under compression and never under flexion.

TRASCO® couplings are suitable for working in both horizontal and in vertical positions and easily support any load variation or reversal motion. The two coupling halves are electrically insulated from each other.

### ATEX Directive 2014/34/EU

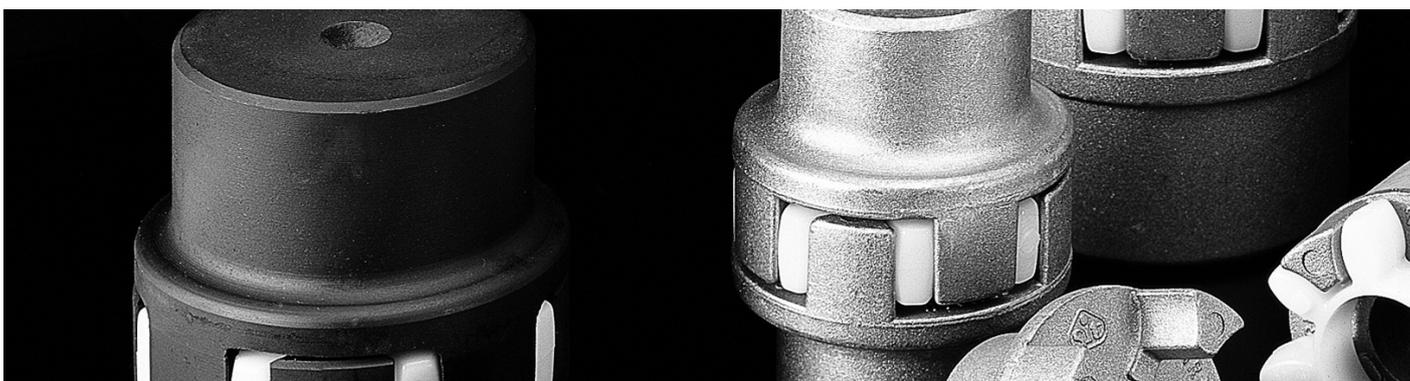

It is possible to ask for specific certification for use in hazardous area according to ATEX Directive 2014/34/EU. TRASCO® couplings

are available with specific mounting/operating instruction manual and conformity. For information, please contact our technical office.

TRASCO® flexible couplings consist of two precision machined metal hubs and an elastic gear ring (spider) which is resistant to oils, chemical agents, and heat.

Hubs are available in cast iron GG25 or aluminum and, in case of special request, in steel or cast iron GGG40.

Each hub is available in version "A" and "B" (in standard or long hub "L" version) which can accommodate different size of bores, leaving unchanged the performance and the technical features.

## Spider

The gear ring is made of a particular polyurethane resin which shows great advantages in comparison to the standard polyurethanes available on the market.

The urethane compound of our polyurethane gear ring offers resistance to aging, hydrolysis, fatigue, and abrasion making it suitable for even the most demanding applications in high humidity

conditions. It is self-dampening and shows a great resistance to the main chemical agents, acids, oils, and ozone.

Special types of gear rings are available in order to provide the right solution for each specific application covering a large range of temperatures and resisting specific chemical agents.

Standard spiders					
(Shore)	Color	Compound	Admissible Temperature [°C]		Applications
			on work	peaks	
<b>92 Sh A</b>	Yellow	Polyurethane	from - 40 to + 90	from - 50 to + 120	• the most of industrial application (low-mid power)
<b>98 Sh A</b>	Red	Polyurethane	from - 30 to + 90	from - 40 to + 120	• high torque – narrow angular misalignment – torsional rigidity
<b>64 Sh D</b>	Green	Polyurethane	from - 30 to + 110	from - 30 to + 130	• dampened areas – internal combustion engines

Spiders for special applications					
(Shore)	Color	Compound	Admissible Temperature [°C]		Applications
			on work	peaks	
<b>80 Sh A</b>	Blue	Polyurethane	from - 50 to + 80	from - 60 to + 120	• internal combustion engines / high dynamic solicitations / highly dampened areas
<b>PA</b>	Grey	Polyamide	from - 20 to + 110	from - 30 to + 150	• high torsion rigidity / high temperature areas / high resistance

Available on request spiders with different compound for special applications:

- High working temperature
- Heavy working conditions
- Heavy environment conditions
- Resistance to specific chemicals

## TRASCO® coupling sizing as per DIN 740/2

TRASCO® coupling sizing is made according to DIN 740/2. Couplings must be selected to ensure that the maximum admissible torque is never exceeded during operation.

It is necessary to have correct sizing, so that all conditions hereunder are respected.

### 1) Verify the nominal torque

The nominal torque of the coupling must be greater than or equal to the nominal torque of the drive multiplied by the temperature safety factor.

$$T_{KN} \geq T_N \cdot S_\theta \quad [\text{Nm}]$$

Note that:

$$T_N = 9550 \frac{P_N}{n} \quad [\text{Nm}]$$

Where  $P_N$  is the motor nominal power in kW.

### 2) Verify the maximum torque

The max torque of the coupling must be greater than or equal to the starting torque  $T_s$  multiplied by the safety factors  $S_\theta, S_z, S_u$  where  $S_u$  is the higher value between driver and driven units.

$$T_{Kmax} \geq T_s \cdot S_\theta \cdot S_z \cdot S_u \quad [\text{Nm}]$$

### 3) Verify torque with reversal

In case of torque with reversals it must be verified that:

$$T_{KW} \geq T_w \cdot S_\theta \quad [\text{Nm}]$$

where  $T_{KW}$  = torque with reversal, which the coupling can bear, and  $T_w$  = torque variation of the drive.

In case of drives with high torsional vibrations (e.g. piston compressors, combustion engine) it is recommended to make a torsional vibration calculations in order to guarantee the correct functioning of the coupling. Please consult our technical office.

Shock load safety factor

Shock load type	$S_u$
Light	1,4
Medium	1,5
Hard	1,8

Temperature safety factor

T (°C)	-30°C / +30°C	+40°C	+60°C	+80°C
$S_\theta$	1	1,2	1,4	1,8

Safety factor for frequency of starting

Starts/h	0÷100	101÷200	201÷400	401÷800
$S_z$	1	1,2	1,4	1,6

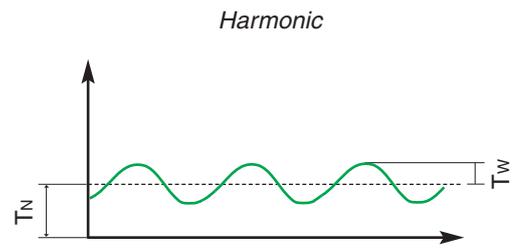

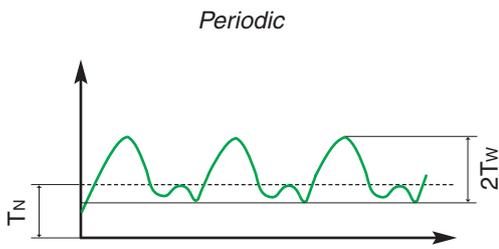

### Hub shaft connection check

Hub shaft connection must always be checked by the user. It is important to verify the maximum torque in the drive is lower than the torque which the hub shaft connection can bear. In case of keyway connection, it is important to verify the tensile strength of the hub material with the load which the keyway seat must transmit.

$T_{KN}$	Coupling nominal torque	Nm
$T_{Kmax}$	Coupling maximum torque	Nm
$T_{KW}$	Torque with reversal transmissible by the coupling	Nm
$T_N$	Motor nominal torque	Nm
$T_s$	Motor peak torque	Nm
$T_w$	Torque with reversal of the machine	Nm

$S_\theta$	Temperature factor	
$S_z$	Start frequency factor	
$S_u$	Motor or driven-side shock factor	
$P_N$	Motor nominal torque	kW
$n$	rpm	min <sup>-1</sup>

### Type of stress

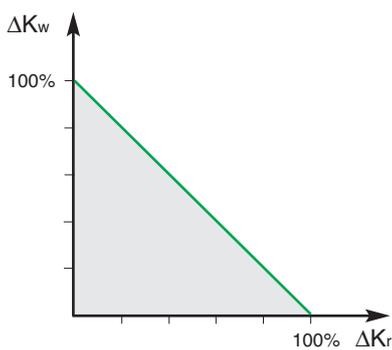

### Misalignment

Size	$\Delta K_{aP}$ [mm]	$\Delta K_r$ [mm]	$\Delta K_w$ [°]
19/24	1,2	0,20	1°30'
24/32	1,4	0,22	1°30'
28/38	1,5	0,25	1°30'
38/45	1,8	0,28	1°30'
42/55	2,0	0,32	1°30'
48/60	2,1	0,36	1°30'
55/70	2,2	0,38	1°30'
65/75	2,6	0,42	1°30'
75/90	3,0	0,48	1°30'
90/100	3,4	0,50	1°30'
100/110	3,8	0,52	1°30'
110/125	4,2	0,55	1°30'
125/145	4,6	0,60	1°30'
140/160	5,0	0,62	1°30'
160/185	5,7	0,64	1°30'
180/200	6,4	0,68	1°30'

$n=1500 \text{ min}^{-1}$

The values shown in the table for radial and angular misalignment, must be corrected in case they are simultaneously acting on the coupling.

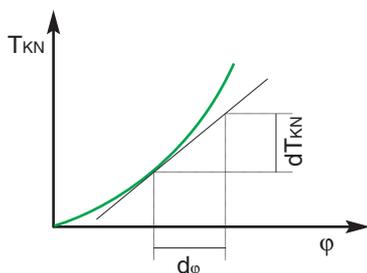

The sum of the admissible value (A) and the respective values shown in the table must be less than or equal to 1.

$$\frac{\Delta K_{aP}}{\Delta K_r} + \frac{\Delta K_{wA}}{\Delta K_w} \leq 1$$

$\Delta K_{aP}$	Maximum axial misalignment	mm
$\Delta K_r$	Maximum radial misalignment	mm
$\Delta K_w$	Maximum angular misalignment	°

### Dynamic torsional rigidity

Dynamic torsional rigidity  $C_{Tdin}$  is the first derivate of the nominal torque of half coupling in respect to the torsion angle.  $\phi$  is the torsion angle of half coupling in respect to the second half.

As a general rule,  $C_{Tdin}$  is greater than  $C_T$  and depends on the stress acting on the coupling.

# Technical performances

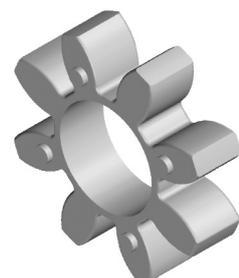

The technical performances below refer to all types of TRASCO® executions and are valid for the indicated spiders when couplings are properly selected.

For particular applications needed, such as very high chemical resistance, spiders made of special material are available. Contact our Technical Department.

# “GR” base program

TRASCO® couplings are dimensionally manufactured to hub types “A” and “B”, the difference being the maximum shaft diameter which hubs can accept (corresponding respectively to the first and second code number). The long hub execution “L” (allows full coverage of the motor shaft) is available in both “A” and “B” executions.

Materials used for manufacture are:

- cast iron grade GG25 (all sizes);
- aluminum, die-casting
- cast iron grade GGG40 and steel upon request.

**Approved according to ATEX directive.**

# “GRB” taper bushing series

TRASCO® couplings type GRB for taper bushing SER-SIT®, are manufactured in cast iron GG25.

They combine the typical high performances of standard TRASCO® couplings with the advantages of easy mounting and dismounting offered by the taper bushing SER-SIT®.

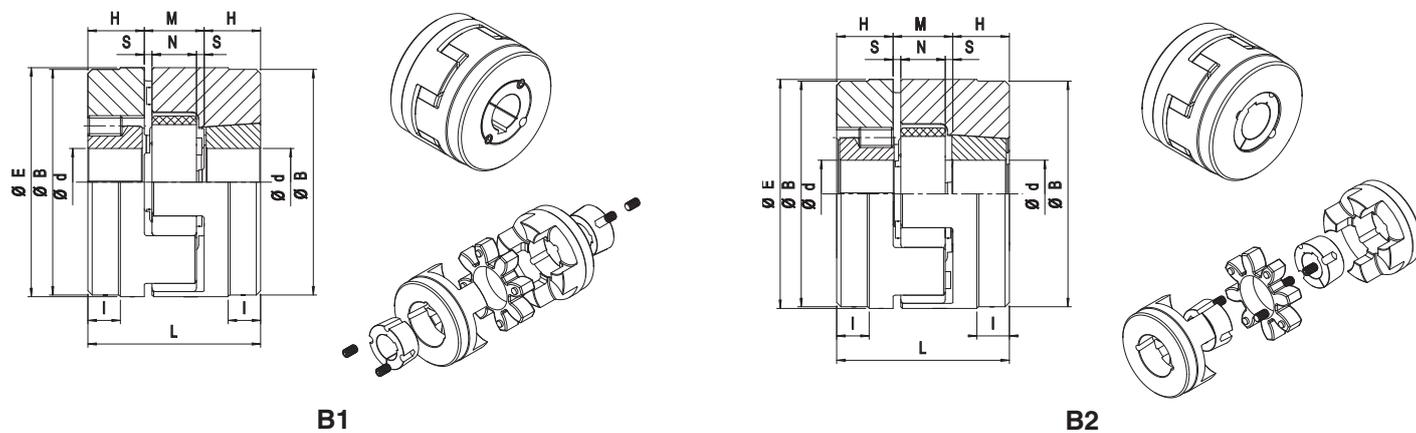

These hubs are manufactured in two different mounting executions:

- B1: installing of taper bushing from outside
- B2: installing of taper bushing from inside (not available for size 90/100)

The GRB execution eliminate the problem of fitting corrosion, making it suitable for all type of machinery.

Hubs type B1 may be axially moved for spider replacement.

**Approved according to ATEX Directive.**

**B1**

**B2**

# “GRCAL” series for use with SIT-LOCK® elements type 8

This execution has been introduced to incorporate advantages offered by the SIT-LOCK® locking elements in the shaft-hub connection.

The system allows for a quick, safe and backlash free mounting without the use of keyway and eliminating the need for lock

washers, spacers and stop rings.

Many different solutions may be created to solve all kinds of application needs.

We include hereunder a very useful example. In fact, the same hub bore allows the fitting of different shaft diameters.

## “GRL” series with intermediate shaft

The GRL series allows the joining of two shafts (even very distant) through two TRASCO® couplings and an intermediate shaft (length “Lw”) of customized dimension. The presence of two polyurethane rings allows high dampening

capability and greater radial misalignments. As a standard, hubs are made of cast iron, while shafts are from steel; though, different materials can be used, according to different applications.

## “GRL CAL3” series with intermediate shaft

The GRL CAL3 series allows the joining of two shafts (even two spaced) through two TRASCO® couplings and an intermediate shaft (length “LR2”) of customized dimension, mounted with shrink discs on the hubs. The presence of two polyurethane elements allows high

dampening capability and greater radial misalignments. As a standard, hubs are made of cast iron, while shafts are made of steel; though different materials can be used according to different applications.

# “GRF” flange series

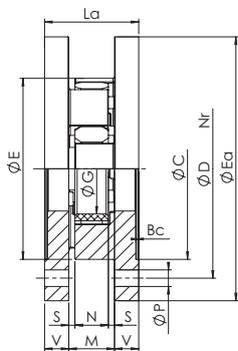

The GRF series with flanges has been developed for applications on heavy machinery and to combine different shafts and flange solutions.

There are different assembling options:

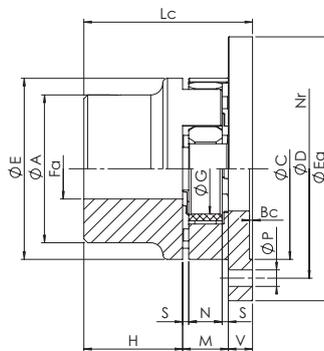

**Flange-flange:** using two hubs type “CF”

**Flange-shaft:** using one hub Trasco standard “GR” and one hub type “CF”

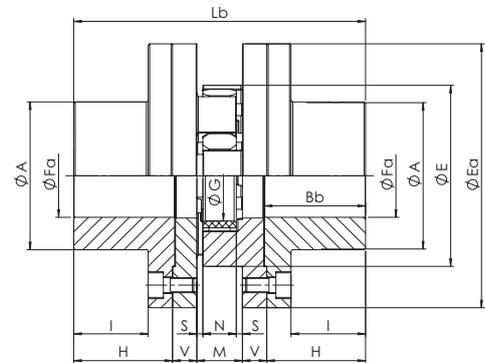

**Shaft-shaft:** using two hubs type “CFF”, allows the replacement of the elastic element without dismounting of either motor-machine or driven-machine.

## “GRS” double cardanic series

The GRS series allows compensation of high axial, radial and angular misalignment. Additionally, the use of the double

spider allows for twice the torsion angle and provides very high dampening effect.

## “GR FRT” drum brake series

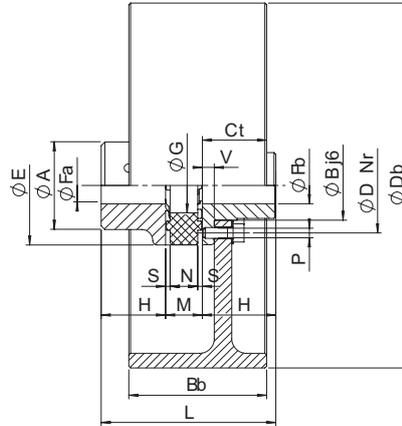

The GR FRT series has been developed to suit drum brake (FRT) transmission according to DIN 15431/15435.

It is considered an elastic coupling consisting of:

- Standard hub (any of Trasco family)
- Elastic spider
- Special hub attached to brake drum

Components are either made of cast-iron (G25), spheroidal cast-iron (GS400), or steel according to application.

Also, assembling of different dimensioned brake drum to any kind of coupling is allowed. See below tables.

Keyway according to DIN 6885 sheet 1 - JS9

Weight and moments of inertia are calculated on hubs with max diameter bore.

# Tables for TRASCO® couplings with taper or splined bores

## Taper 1:5 per: BOSCH - BUCHER- LEDUC - DÜSTERLOH

Code	$\varnothing d + 0,05$	b JS9	$t2 + 0,1$	$l_k$
a1	9,85	2	1	11,5
a2	16,85	3	1,8	18,5
a3	19,85	4	2,2	21,5
a4	21,95	3	1,8	21,5
a5	24,85	5	2,9	26,5
a6	29,85	6	2,6	31,5
a7	34,85	6	2,6	36,5
a8	39,85	6	2,6	41,5

## Taper 1:8 per: ATOS - CASAPPA - GARBE LAHMEYER - JOTTI & STROZZI MARZOCCHI - SALAMI - SAUER-FLUID

Code	$\varnothing d + 0,05$	b + 0,05	$t2 + 0,1$	$l_k$
b1	9,7	2,4	6	17
b2	11,6	3	7,1	16,5
b3	13	2,4	7,3	21
b4	14	3	8,5	17,5
b5	14,3	3,2	8,5	19,5
b6	17,287	3,2	9,6	24
b7	17,287	4	10,3	24
b8	17,287	3	9,7	24
b9	22,002	3,99	12,4	28
b10	25,463	4,78	15,1	36
b11	25,463	5	15,5	36
b12	27	4,78	15,3	32,5
b13	28,45	6	15,1	38,5
b14	33,176	6,38	18,8	44
b15	33,176	7	18,8	44
b16	43,057	7,95	3,378	51
b17	41,15	8	3,1	42,5

## Taper 1:10 per: PARKER HANNIFIN NMF - TEVES

Code	$\varnothing d + 0,05$	b JS9	$t2 + 0,1$	$l_k$
c1	19,95	5	12,1	32
c2	24,95	6	14,1	45
c3	29,75	8	17	50

## SAE splined profile

Code	Size	Head	Pitch	N. of teeth	
PH-S	5/8"	14,28	16/32	9	30°
PI-S	3/4"	17,46	16/32	11	30°
PB-S	7/8"	20,63	16/32	13	30°
PB-BS	1"	23,81	16/32	15	30°
PJ	1 1/8"	26,98	16/32	17	30°
PC-S	1 1/4"	29,63	dic-24	14	30°
PA-S	1 3/8"	33,33	16/32	21	30°
PD-S	1 1/2"	36,51	16/32	23	30°
PE-S	1 3/4"	42,86	16/32	27	30°
PF	2 9/16"	63,5	16/32	40	30°

## DIN 5482

Code	Size	Head	Pitch	N. of teeth	Tolerance
P 8217	A 17 x 14	14,4	1,6	9	0,6
P 8228	A 28 x 25	26,25	1,75	15	0,302
P 8230	A 30 x 27	28	1,75	16	0,327
P 8235	A 35 x 31	31,5	1,75	18	0,676
P 8240	A 40 x 36	38	1,9	20	0,049
P 8245	A 45 x 41	44	2	22	0,181
P 8250	A 50 x 45	48	2	24	0,181

## DIN 5480

Size	Head	Pitch	N. of teeth
20 x 1 x 18 x 7 H	18	1	18
20 x 1,25 x 14 x 7 H	17,5	1,25	14
25 x 1,25 x 18 x 7 H	22,5	1,25	18
