CONTROLLED INFORMATION DISTRIBUTION

Providing trial sites with a single source for trial information and materials

TriTiCon's TTC TRIALHUB is a web-based portal for **trial sites,** consolidating trial information and materials in a structured, easy and intuitive way. The TTC TRIALHUB also help **sponsors** to streamline, consolidate and control the distribution of information and materials to sites.

Sponsors experience high competition for trial sites and trial patients as clinical trials are becoming more complex and laborious for sites to manage. Having a solution that reduces these burdens for site personnel by controlling information distribution gives the sponsor a key competitive advantage and will result in the sponsor attracting more sites whilst having the ability to drive quality and compliance.

With TTC TRIALHUB, the sponsor can streamline the distribution of trial information and material in a controlled and compliant manner. The sponsor can provide sites with an intuitive platform that consolidates and organizes essential trial information and documents across processes and systems. This platform will support work carried out by sites personnel by strengthening the sites capabilities and increasing the efficiency and quality of trial conduct.

The TTC TRIALHUB is an information portal consolidating and presenting information for **trial sites.** Different types of trial information and material from different providers such as the clinical trial protocol, manuals, forms, newsletters, links to systems and contact information is made available in a single location and is structured in an easy and intuitive way. The TTC TRIALHUB allows **sponsors** to control document rollout by site, country or region and supports compliance in document distribution.

Providing trial sites with a single source for trial information and materials

TTC TRIALHUB design and functionality

TTC TRIALHUB - Main modules

- **Protocol overview – Overview of trial visits and procedures with instructions and links to associated documents.**
- **Document library – Versioned material library for the protocol, forms, templates, etc.**
- **Contact information – Centralized, easily maintained contact information for the CRA, sponsor, helpdesks, safety etc.**
- **Links to systems and other resources.**
- **News and messages from sponsor – News, key alerts, areas of interest.**

Contact information

Clinical trial challenges are increasing due to complex and adaptive designs, an expansion in the number and type of systems available and new requirements for documentation and instructions. This in turn increases the amount of information and material that requires distribution and control.

For **site,** this results in a massive flow of information and documents through a multitude of information channels and systems, resulting in an increase in site burden and a potential negative impact on sites willingness to participate in trials and recruit patients.

In addition, there are increased risks that site will use the incorrect version of a document or instruction, leading to protocol incompliance.

For **sponsors,** keeping the information distribution under control is resource intensive and challenging since they must ensure control and overview of which site had what when, at the same time as upholding compliance.

A solution that reduces complexity for both the sponsor and trial sites personnel could be a key competitive advantage for the sponsor alongside decreasing site burden and increasing compliance, efficiency and quality.

TTC TRIALHUB

Centralized Distribution Increased compliance

Simplified Distribution Increased efficiency

TTC TRIALHUB helps **sponsors streamline and consolidate** the distribution of information and material to trial sites, thereby increasing efficiency, **control** and compliance. It provides updates and versioning, controlled roll-out by site, region or country, news, contact information and training-material, amongst other things.

TTC TRIALHUB provides **sites** with a platform that **reduces complexity** for site personnel by consolidating and organizing relevant trial information in a structured, easy and intuitive way. Supporting trial site personnel's work will result in **saving time and increasing compliance,** whilst helping the site to find all, find easy and find the right information.
