

## Care and cleaning KOMFORTEX Slabs

KOMFORTEX® protection is a durable, easy-to clean and water-resistant wall covering used as protection against kicks in horse boxes. KOMFORTEX® protection is available as roll material and easy to install. Therefore it protects the wall from damages and decreases the risk of injuries to the horses.

### Cleaning

Clean off loose dust and dirt by using a high-performance vacuum cleaner. Optionally use a vacuum cleaner with rotating brush attachments or other fittings to supporting the vacuum cleaner. Remove clinging dirt with a lightly spray-wetted cloth.

### Remove more stubborn stains as follows:

Wet stain with a solution made up of water with a dash of liquid soap (e.g. dishwashing detergent) and rub with the lightly spray-wetted cloth over the stain. Rinse with clear water and dry. Alternative to this it is possible to use a commercially available wet-vacuum cleaning machine or any other suitable wet cleaning machine. Do not use any abrasive, solvent-based or chlorine-based cleaner to solve the material stability and the health of the horses!
