

Key question: Can you design a system that can track all swaps?

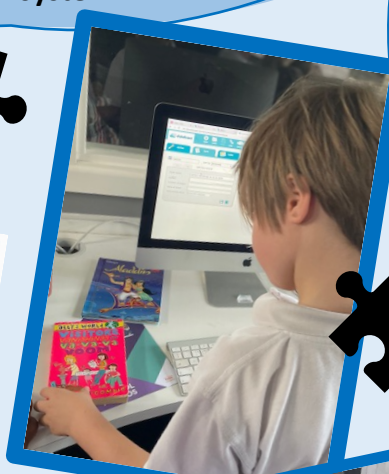

Pupils were tasked with creating an online system that would keep track of any swaps made in the 'Switch Ditch'. This would help ensure their new venture would be managed effectively. Pupils decided that an online database would be the perfect system for what they needed. Each pupil created their own database using J2E, adding in relevant field names. Pupils added a range of books into their database to 'test' out their system.

Adding records to our database

Building our database and adding relevant

Giving online feedback of each other's videos

App Flow

DCF

Data & Computational Thinking

I can construct, refine and interrogate data sets within tables, charts, spreadsheets and databases to test or support an investigation

Producing

I can use keyboard commands such as shortcuts.

I can use software tools to enhance the outcomes for specific audiences.
