 Massimo Della Marta
Designer & Founder

HISTORY

Founded in 2004 by designer Massimo Della Marta, the company was born from a clear vision: to combine technology and emotion in the world of wine. A sommelier by passion, Della Marta has created climate-controlled wine cabinets of extraordinary aesthetic and technological innovation, such as the Teca and the iconic Quadro Vino, which have become internationally recognized symbols.

World-class patents, including the innovative central refrigeration system, attest to the company's expertise in the fields of mechanical and thermodynamic engineering.

Della Marta cabinets are not mere refrigerators, but essential furnishing elements that bring wine into the living room, transforming every space into a setting of conviviality and culture. Chosen by prestigious hospitality professionals and serving as the official cabinets of the Italian Sommelier Association, they are today a timeless icon for wine enthusiasts worldwide.

TECA

Teca stands out for its understated elegance and deliberately minimalist design, conceived to give center stage to the star of the show: your wine. The large glass surface highlights the unique horizontal display of the bottles, transforming them into a striking and visually captivating scene. The central cooling system ensures ideal storage conditions, while the glass on all sides and the sliding doors enhance brightness, functionality, and ease of use.

NOVA

Clean lines, contemporary design, and refined details make it the centerpiece of any space. The door profiles and interior finishes, available in a variety of finishes and colors, allow you to create exclusive combinations that blend seamlessly with the surroundings, whether installed freestanding or built-in. Designed for high performance, it features a central refrigeration system, optimized insulation, and energy-efficient glass.

MOD

Mod is a modular and versatile system suitable for both residential and commercial projects. It's ideal for displaying, storing, and serving wine—but that's not all. By incorporating cold dish and charcuterie modules, you can create a practical, elegant, and distinct area dedicated exclusively to food and wine presentation. A wide range of finishes and colors allows you to create original and exclusive settings.

Our creations

ARKA

Arka is a wine storage system that combines design, functionality, and technology, distinguished by its exceptional height, which accentuates the verticality of the space and creates a unique visual impact. A flexible and modular system, designed to create linear wall-mounted configurations, central islands with doors on both sides, or full-fledged wine rooms with a dedicated entrance. Maximum customization. Doors in premium finishes including steel, gold, or bronze, and interiors lined with precious metals or leather, for a refined and fully bespoke aesthetic experience.

Design and technology come together to create the world’s first refrigerated wine frame display. An exclusive piece of furniture for displaying and storing your finest bottles. The differentiated temperature zones allow you to store both white and red wines simultaneously. The wooden frame and the interior panel in metal or eco leather can be customized with different finishes and colors. It is the world’s thinnest climate-controlled wine display, easily integrated even into small spaces.

EMME 12

A climate-controlled cabinet designed for contemporary architecture, featuring an extremely slim depth that makes it perfect for wall-mounted installations or built-in solutions in sophisticated, urban spaces.

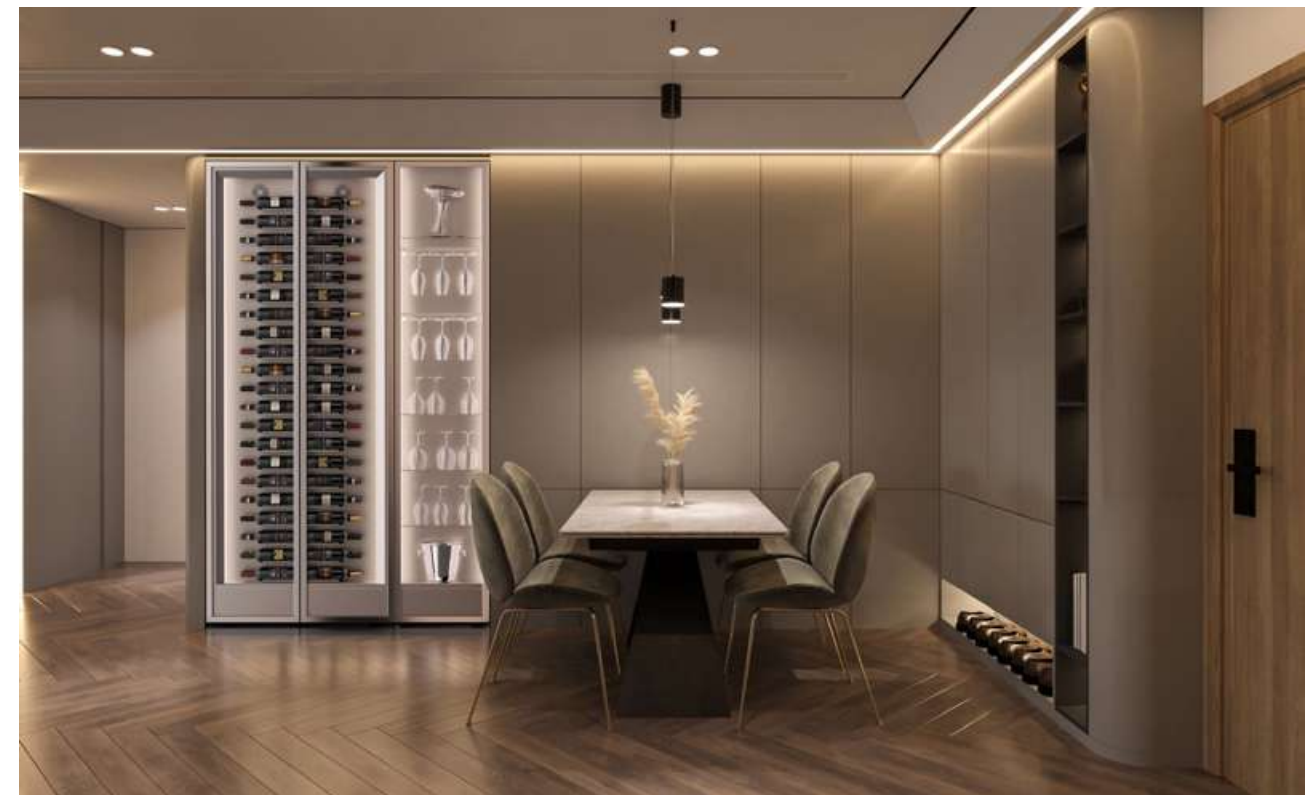

Customization is part of the concept: wooden frames available in various finishes interact with interior panels in metal or leather, for a result that ranges from contemporary minimalism to a warmer, more tactile elegance.

A design object conceived not only to preserve, but to furnish with character, define the space, and interpret wine as an expression of style and culture.

WINE LIVING

Design and installation of custom-made wall units for the living room. The Wine Living wall units, custom-designed and tailored to your needs, are designed to accommodate all Della Marta climate-controlled wine cabinets, ensuring seamless integration even for glasses and accessories. The architecture of the spaces is enhanced by balanced proportions and design details that lend elegance and visual lightness. The choice of materials is virtually endless: fine woods, marbled finishes, crafted metals, glass, and lacquered surfaces. Even the TV stands and storage units can be crafted in different styles and materials, combining contemporary aesthetics with practical comfort. Each wall system thus becomes a true high-end interior design project, capable of harmonizing technical functionality, prestige, and beauty, transforming the living room into an exclusive and refined space where wine and its accessories are showcased to their fullest potential.

THE FACTORY

Located in Rivoli, at the foot of the UNESCO World Heritage-listed castle and the Museum of Contemporary Art, our factory blends history, art, and innovation. Here, where Massimo Della Marta was born and brought his ideas to life, the designs that have made our company an internationally recognized leader in excellence are created every day. The facility combines cutting-edge technologies and systems with a deep respect for the environment and the historic architecture that defines it. Advanced insulation, underfloor heating powered by heat pumps, and self-generated energy from solar panels enable us to achieve maximum energy efficiency without CO2 emissions. A unique place where past and future interact, reflecting elegance, harmony, and sustainability, and where every product is born from vision, expertise, and care for the environment.

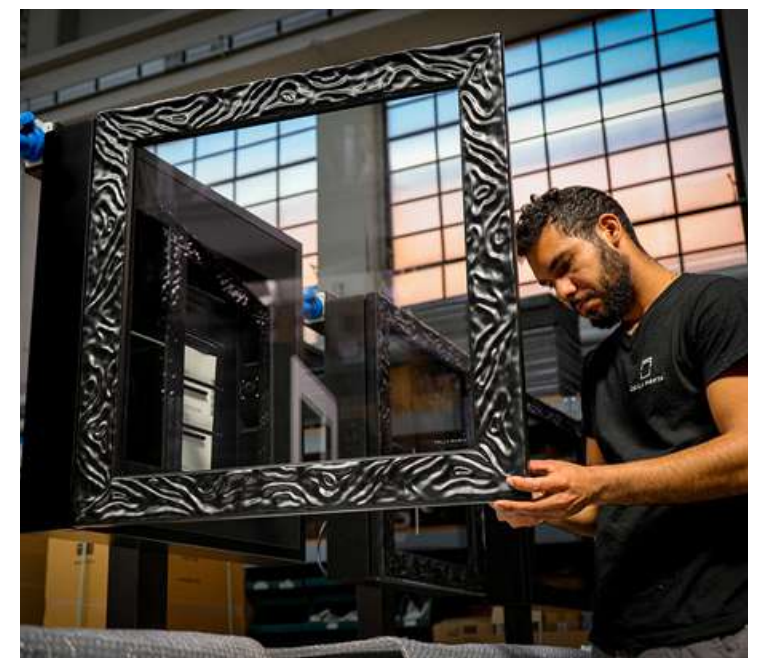

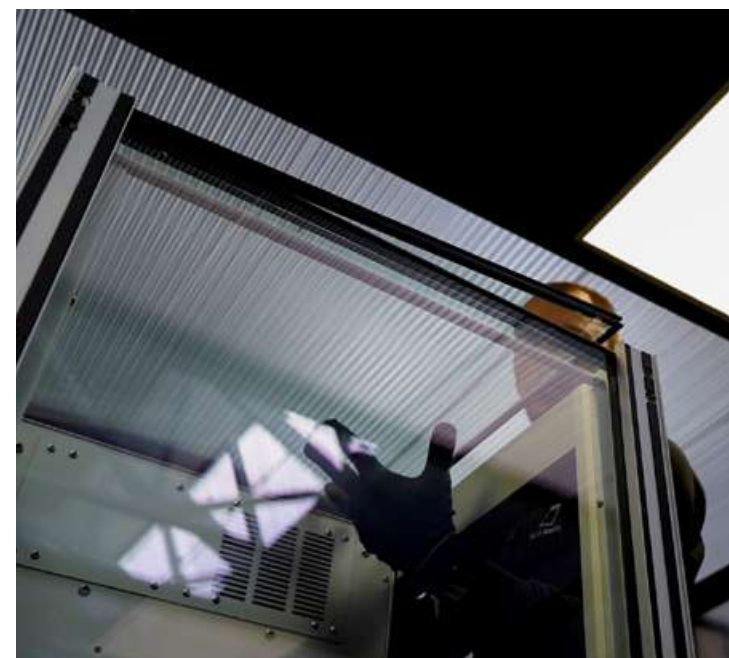

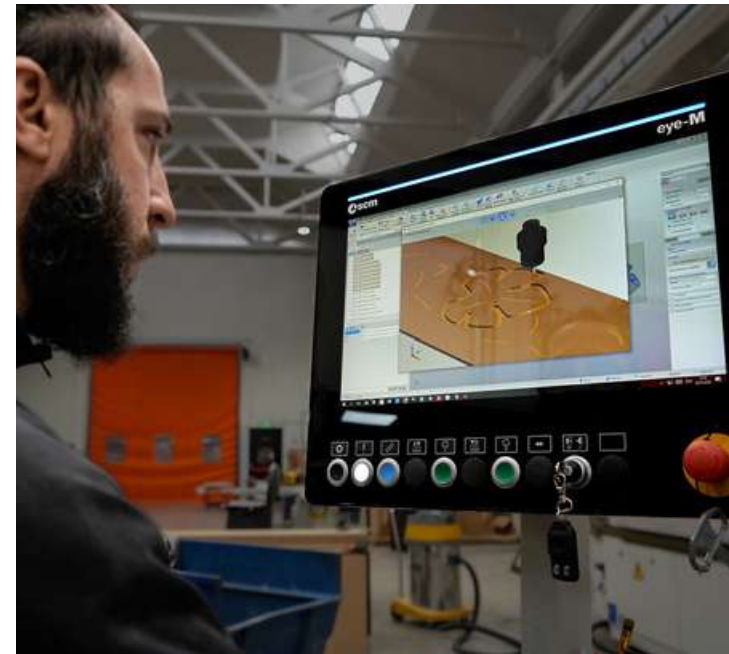

1962, the year our manufacturing plant was built.

PRODUCTION

Our technological expertise is rooted in extensive experience in 3D design and modeling, as well as in the use of CNC machines for high-tech manufacturing processes. But technology is a tool justified by its utility, which we combine with a bespoke approach through handcrafted work. Product assembly is done manually, not on an assembly line, but at individual workstations designed to ensure optimal conditions throughout all stages of production. Our specialized technicians build the product following rigorous procedures and with full awareness of how important their work is to achieving the quality demanded by our customers worldwide. Every product is crafted with attention to every detail. Our production achieves high quality through the combined application of industrial manufacturing processes and artisanal craftsmanship.

CERTIFICATIONS, TESTING, AND WARRANTY

Our products are certified and meet the highest manufacturing standards. Rigorous testing procedures, including computerized analysis and functional tests, are performed on the entire production run to ensure the safety and quality of every product.

The company designs and manufactures exclusively mechanically assembled products that can always be easily repaired anywhere in the world. A state-of-the-art connection system allows our technicians to provide remote assistance wherever in the world the product is located. The warranty, extendable up to 5 years, attests to the reliability and durability of our products over time.

PATENTS

Our company has filed numerous patents and design patents over the past twenty years. Among the most significant are the Teca, the Quadro Vino, the Mod, and the rechargeable activated carbon filter, but the most revolutionary patent by far is undoubtedly the Central Refrigeration System. It represents a revolution in the field of applied thermodynamics. It is the world's first refrigerator with an evaporator coil at the center of the refrigerated compartment, ensuring perfect thermal balance. The evaporator acts as a support. All bottles are positioned at the same distance from the cold source.

OFFICIAL CABINETS

Associazione Italiana Sommelier

Della Marta climate-controlled wine cabinets are the official cabinets of the Italian Sommelier Association. Design is important, but for AIS sommeliers, being able to rely on technology to provide the best climate conditions for their wines is even more so. Working alongside the best Italian sommeliers, it is a fantastic opportunity to understand their needs in order to design and build products of an increasingly high standard in the years to come.

BEYOND DESIGN

The Wine Frame transforms into a work of art.

"De Valle Love," presented in the exhibition "Homage to Carlo Mollino" curated by the Paola Colombari Gallery in Milan, was the first in a series of limited-edition and open-set projects dedicated to collecting, art, and designer pieces.

This vision was followed by highly prestigious creations: "Colpo Eccezionale," the triptych dedicated to Diabolik created in collaboration with pop artist Cristina Stifanic; "Sugar Cane," inspired by Brazilian designer Ronald Sasson; and "Frida," a tribute to the extraordinary Frida Kahlo, developed in collaboration with the Leo Matiz Foundation in Mexico City.

Each work interprets the Wine Frame as a three-dimensional canvas, where design, art, and culture come together to create unique pieces, designed to become collector's items.

GLOBAL PARTNER

THE WINE OF THE CHAMPIONS

The Wine of The Champions is a venture born from the idea of Fabio Cordella, a man of sports and wine producer, who has brought together great soccer champions, and created with them—and for each of them—fine wines that bear their names and reflect their personal tastes. The collaboration between Fabio Cordella and Massimo Della Marta has given rise to a prestigious collection of art design objects, signed by great football champions such as Ronaldinho, Roberto Carlos, Sneijder, Amauri, Seba Frey, Jankulovski, and many others.
