Backed by its industrial capacity and technical know-how, TotalEnergies supports its customers' mobility by providing them with the energy they need, its network coverage and a range of relevant services to meet all their needs.

TotalEnergies provides concrete solutions in the context of the transport and energy transition, investing massively in the development of large-scale electric mobility, helping to remove one of the main obstacles to this market growth: the deployment of charging infrastructures accessible to the greatest number of people.

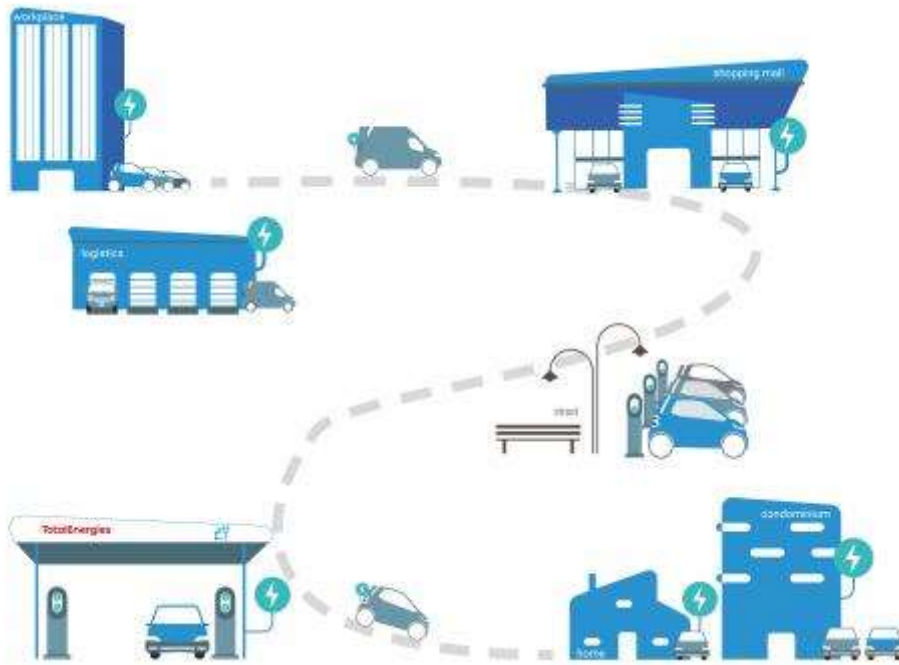

Whether at home, in the workplace or on the road, TotalEnergies provides you with a charging service based on less carbonated energy that is available to as many people as possible, within easy reach so that you can move around with complete peace of mind.

Charging habits

At workplace: 27% of charging sessions happen at workplace. Employees charge their electric vehicle rather it is a personal car or a company car.

On the road: 14% of charging sessions are made on roadways or when visiting commercial locations.

At service station: charging in service stations represents 7% of electric charges. Drivers mainly use this option when travelling long distances on the highway. TotalEnergies is building a network of high-power

charging service in 300 stations across Western Europe.

At home: 52 % of charging sessions take place at home. TotalEnergies provides a charging solution for your private driveway or for your residential parking lot. You will be able to plug either your personal vehicle or your company vehicle.

Companies

A charging service for your employees and guests. TotalEnergies adapts to your specific needs.
