MADE
FOR
WATER®

A sailor wearing a red racing suit and a yellow helmet is steering a boat. The sailor is wearing black gloves and has a focused expression. The background is a dark, choppy sea under a cloudy sky. The text "YACHTING WEAR EXPLAINED" is overlaid in large, white, bold letters. There are two vertical yellow lines, one above and one below the text.

YACHTING WEAR EXPLAINED

SECTION .01

LAYERING UP

1. Baselayers

Baselayers are required to wick moisture away from the skin. During times of intense activity, the body sweats to effectively manage temperature. Once this activity ends there is a danger for clothing to be damp, as moist skin loses temperature far quicker than dry skin.

For this reason, it is important to have an efficient base layer to transport moisture away from the skin and towards the outer shell. Keeping dry is the key to staying warm.

2. Midlayers

The mid-layer is the primary layer for generating heat, this is important in cold conditions. Mid-layers should be optimized to trap dry, insulating air around the body while also expelling water vapour that has been transferred off the base layers. Insulation and breathability are the key for mid-layers.

3. Outer Layers / Shells

Outer layers or shells are the main barrier to the elements. They must fully block external water and wind while also provide maximum breathability to expel all water vapour that has collected inside the garment. Waterproof shells are particularly challenging to meet the rigorous requirements of the marine environment. There are multiple options available to users to meet each requirement.

SECTION .02

BREATHABILITY

What is Breathability?

Movement of water vapor from an area of high temperature inside a garment, to areas of low temperature outside a garment is central to the theory of breathability.

It is known as water vapor permeability. In order for an athlete to feel as dry as possible, shells need to be breathable.

Maximising breathability in a high performance garment is a delicate balance between breathability and long-lasting waterproofness. Various combinations of membrane materials, face fabrics and thicknesses result in optimized performance for different uses.

Our Membrane Types

Zhik only uses laminated membranes in their materials to maximise breathability and durability. Laminated membranes are far superior to coatings.

Microporous Membranes

These membranes contain microscopic holes that are large enough for water vapor gas to escape outside to cooler temperatures, but too small for water liquid droplets to pass through inside the garment. Microporous membranes traditionally have less resistance to water vapor escaping but in general are less durable than hydrophilic membranes.

Hydrophilic Membranes

Hydrophilic properties of these membrane materials are used to draw water from inside the high temperature environment via wicking to the cooler outside temperatures. Hydrophilic membranes generally are more durable than microporous membranes.

Breathability Tests & Values

Breathability is measured by two tests, these different methods of testing are suited to the membrane properties.

WATER VAPOR PERMEABILITY

Moisture Vapor Transmission Rate (MVTR value)

This method measures how many grams of steam per square meter of membrane surface [g / m²] escapes (penetrates) within 24 hours. The higher the MVTR, the higher the breathability.

Extremely Breathable: 15,000 - 30,000

Very Breathable: 10,000

Breathable: Above 3,000

Not Breathable: -

WATER STEAM CONTINUITY

Resistance to Evaporating Heat Transfer (RET value)

This method measures the force / resistance that water vapor needs to pass through the textile being tested.

Extremely Breathable: 0-6

Very Breathable: 6-13

Breathable: 13-20

Not Breathable: >20

SECTION .03

WATERPROOFNESS

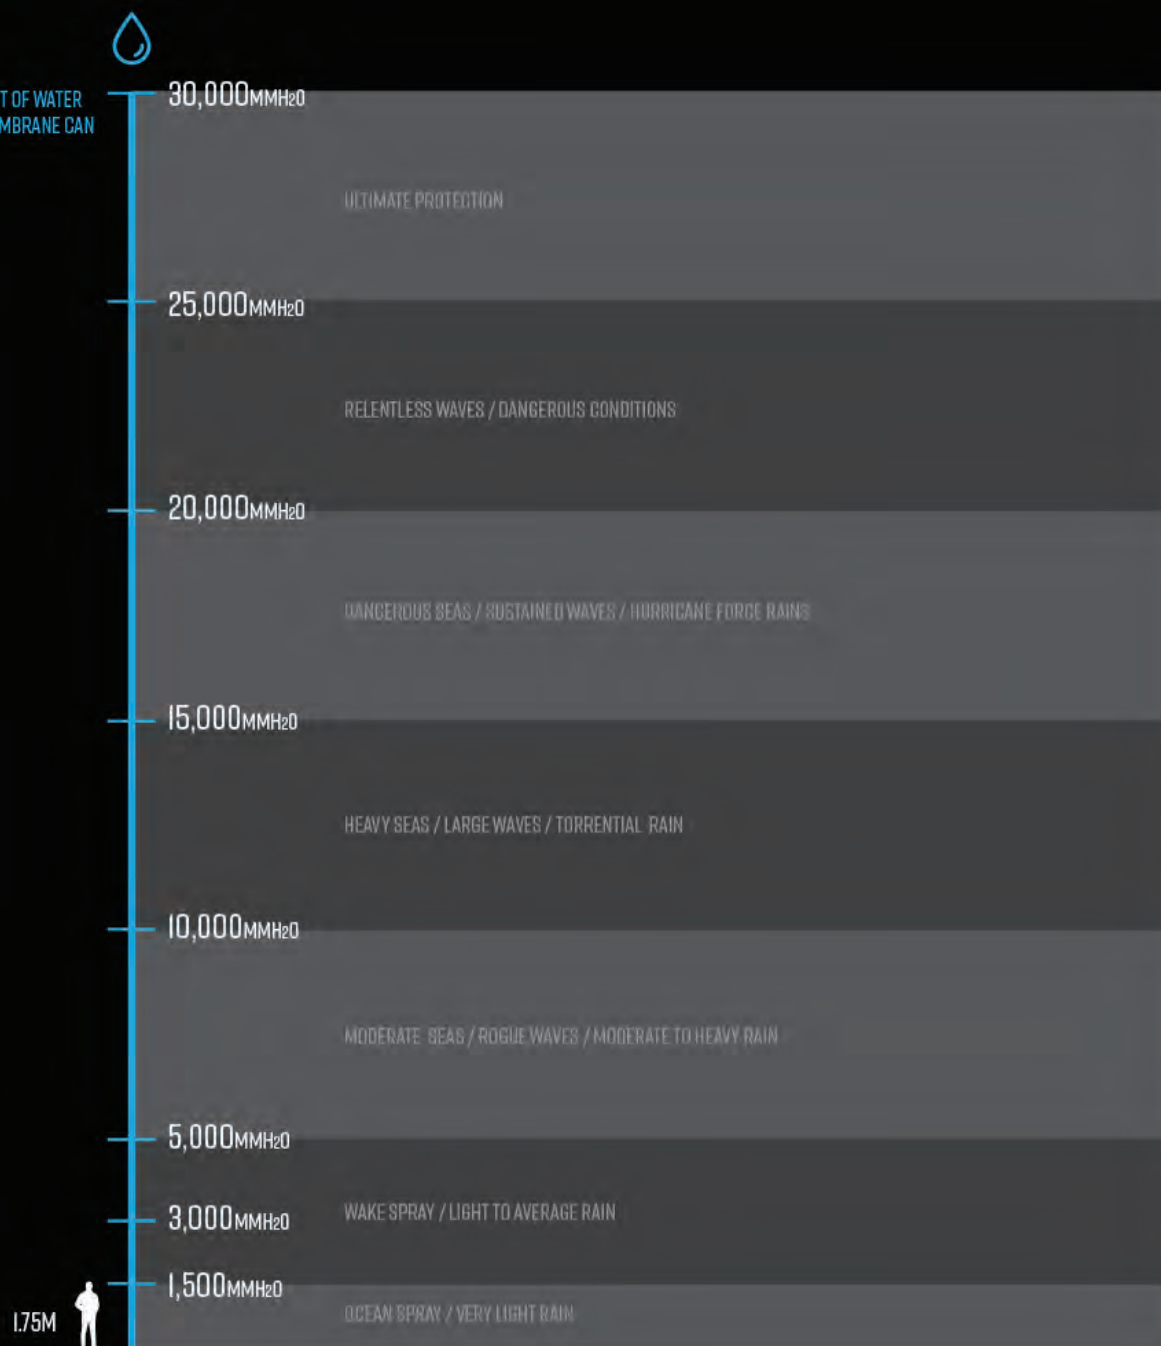

Testing Method

Traditionally, to indicate the waterproofness of technical fabrics, the water column test is used. This is now replicated with the use of a hydrostatic head machine, which applies the same pressure. The water column test is used to measure the pressure required before water pushes through the fabric and membrane. A cylinder ten centimetres in diameter is placed on top of the fabric to be tested and filled with water. It is observed for 24 hours until water pushes through the underside of the fabric. The level of water in the cylinder in millimetres that it took to cause water to push through the fabric is recorded as the water column reading (HH/mm). For example, a 30,000mm reading would equal a 30 meter water tower, in order for there to be enough pressure to penetrate the fabric.

What is DWR?

Durable Water Repellency (DWR) is a treatment applied to the outer face of shells to make them water repellent. The addition of this technology to shells reduces outer-faces that are open to the elements taking in water weight and reduce wind chill effects.

EQUIVALENT HEIGHT OF WATER
PRESSURE THE MEMBRANE CAN
WITHSTAND

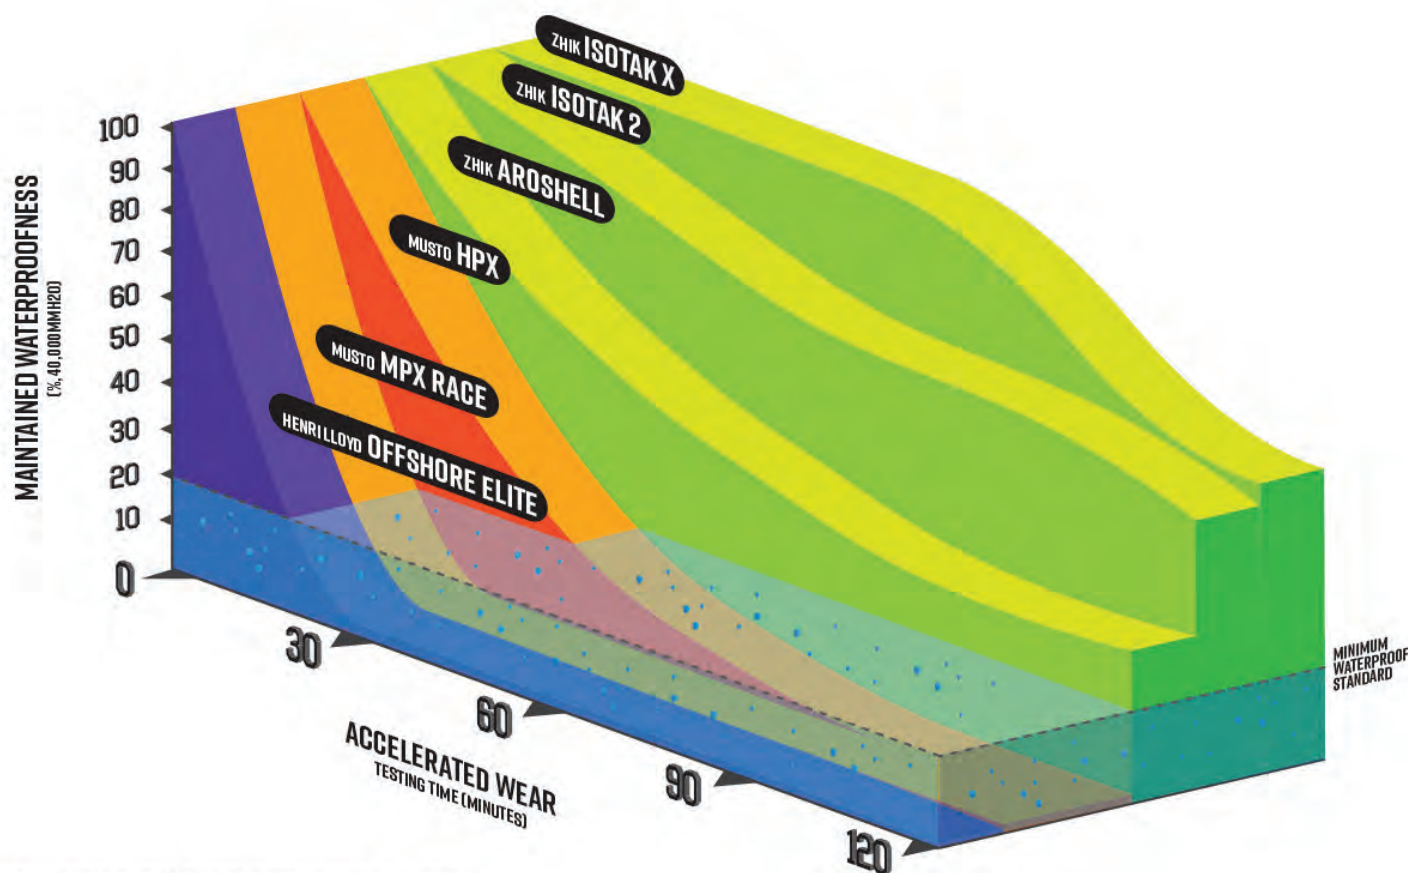

Waterproof Durability Our 4X Claim Explained.

RMIT (Royal Melbourne Institute of Technology) have pioneered the development of a waterproof durability testing method specifically designed to simulate accelerated wear and tear in wet conditions (when the waterproof membrane is most vulnerable).

This method involves placing waterproof textiles in an accelerated wear device that simulates impact and abrasion in wet conditions. Each textile is pressure tested to determine the waterproofness after defined intervals of accelerated wear.

The chart below represents the hydrostatic resistance (Waterproofness) of each fabric after 30, 60, 90 and 120 minutes of accelerated wearing.

Through these tests Zhik® fabrics have been found to be substantially more waterproof durable than competitor fabrics. Which means they will keep you dry and protected for longer before starting to leak.

SHELL PERFORMANCE GUIDE

The following tables offers a general performance overview of our shell ranges.

ACTIVITY	PRODUCT	AREA OF APPLICATION	MATERIAL	WATERPROOF DURABILITY	WATERPROOF FIGURE	BREATHING ACTIVITY	BREATHABILITY FIGURE
OCEAN / OFFSHORE	OFS900 Isotak®X	Extreme protection for the highest professional ocean and offshore use.	Breathable, bicomponent microporous & hydrophilic 4-layer laminate with Isotak® Technology membrane.	 10	> 30,000mm	 7	RET 6-13 m² Pa/W
	OFS800 Isotak®2	High performance product for offshore and coastal racing and cruising.	Breathable, bicomponent microporous & hydrophilic 4-layer laminate with Isotak® Technology membrane.	 9	> 30,000mm	 7	RET 7-11 m² Pa/W
	OFS700 Apex	Built specifically for offshore and coastal racing and cruising.	Hydrophilic, breathable 2-layer laminate with Apex Technology PU membrane.	 4	> 15,000mm	 5	MVTR > 10,000 g/m² / 24h
INSHORE / INLAND	INS300 Aroshell®	The most breathable and durable inshore and coastal performance gear on the market for professionals and racers.	Hydrophilic, extremely breathable 3-layer laminate with Aroshell Technology PU membrane.	 7	> 15,000mm	 9	MVTR > 15,000 g/m² / 24h
	INS200	Highly waterproof and breathable garments for moderate to high activity coastal, inshore and inland sailing.	Hydrophilic, breathable 3-layer laminate with Vecta Technology PU membrane.	 7	> 10,000mm	 4	MVTR > 5,000 g/m² / 24h
INSHORE, CHARTER, MOTORBOAT & LEISURE	INS100	Waterproof and breathable jackets to protect for life on and off the water.	Hydrophilic, breathable 2-layer laminate with Vecta Technology PU membrane.	 4	> 5,000mm	 4	MVTR > 3,000 g/m² / 24h

SECTION .04

FABRIC LAYERS

2L - Two Layer

- A woven face textile with a laminated membrane on the inside face to provide waterproof and breathable protection.
- An internal garment lining protects the membrane, making it more durable and comfortable to wear.

3L - Three Layer

- A woven face textile with a laminated membrane on the inside.
- The membrane layer is the last level of waterproof protection while also providing breathability.
- Lightweight scrim layer is then laminated to the inside face of the membrane, providing additional durability to the membrane and comfort for the user.

4L - Four Layer

- A woven face textile with a composite-laminated membrane on the inside.
- The dual-membrane layer is the last level of waterproof protection while also providing breathability. This membrane functions by drawing moisture away from the user while efficiently expelling water vapour.
- Lightweight scrim layer is then laminated to the inside face of the membrane, providing additional durability to the membrane and comfort for the user.

GLOBE SERIES

OFFSHORE

Extreme conditions and racing on the edge call for outerwear tested to the highest standards, on the water and in the lab.

PHOTO: KONRAD FROST / VOLVO OCEAN RACE

FEATURES

- ⊗ Zhik Multilayer composite membrane and QuLock® seam sealing for 4X more waterproof durability.
- ⊗ [Smock & Jacket] Hydrovison® Visor is an anti-fogging and rigid visor that gives unparalleled 110° vision.
- ⊗ [Smock & Jacket] Advanced Reziseals® provide super soft & durable composite seal design in wrists and neck.
- ⊗ Biomotion reflectors strategically placed on garment allow easy recognition of body movement at night.
- ⊗ [Smock & Jacket] Hydrobase® lining in side pockets, collar and faceshield provides fast drying warmth and comfort.
- ⊗ [Smock & Jacket] PFD compatible quick stow hood lets you raise & lower hood quickly with one hand.
- ⊗ [Smock] Adaptive Hood system gives you versatility to remove and replace the hood with other options for different conditions.
- ⊗ [Smock & Jacket] Long length rear panels in the garments for added protection when sitting.
- ⊗ [Jacket] Dual zipper entry system with easy relief zipper.
- ⊗ Highly durable & waterproof YKK® Aquaguard® zippers throughout with Aquaseal® main zipper on Jacket.
- ⊗ Multiple pockets in key locations for easy access & storage of important belongings.
- ⊗ Reflexite reflectors provide high visibility in low light conditions.
- ⊗ 1000D Cordura® reinforcement in knee & rear panels protects high wear areas.
- ⊗ [Smock & Jacket] Inner neoprene waist skirt to prevent water flushes.
- ⊗ [Salopette] Lightweight removeable inner knee and seat pads for comfort, protection & insulation.
- ⊗ [Salopette] Adjustable Velcro® shoulder straps provide low profile comfort with no loose ends.

SALOPETTE FEATURES

- ⊗ 2 Layer Apex Material technology utilises a rugged Hydrophilic PU membrane designed for a variety of sailing conditions.
- ⊗ Fully Seam taped, with all critical junctions further reinforced to provide maximum waterproof protection.
- ⊗ 80/20 Durable Water Repellence (DWR)
- ⊗ Our soft mesh maximises airflow in warmer conditions and provides and conducts warmth in cold conditions.
- ⊗ Reinforced knee, crotch, Seat and leg cuff panels feature a 500 Denier abrasive material.
- ⊗ Adjustable Cuffs utilise an ergonomic tightening method that distributes pressure evenly up the ankle. Reducing pressure and creating a tighter seal.
- ⊗ The chest pocket provides waterproof protection for your items. Designed to be easily accessible when worn with the jacket.
- ⊗ The Centre Front features a double zipper and a large gusset for easy internal access while remaining waterproofness.
- ⊗ Highly Durable YKK® Vislon zippers
- ⊗ Soft mesh suspenders provide maximum comfort and airflow for days of continuous use.
- ⊗ Zhik's signature 'Set & Forget' velcro straps adjustments are streamlined and low bulk.
- ⊗ Easy access cargo & blade Pocket are constructed with our abrasive resistant fabric for protection against tools and blades.
- ⊗ Waist Adjustment to tailor the fit.

MIDLAYERS & BASELAYERS

Staying warm is key in any marine environment, midlayers & baselayers are the provider of this warmth and insulation in the 3-layer clothing system. Maximum warmth, minimal weight & moisture wicking are the key driving forces behind these lines.

XEFLEX® MIDLAYER SALOPETTE

SKU	SAL-501-GY
SIZE	UNISEX S M L XL XXL
	GREY

FEATURES

- ⊕ Xeflex® radiant heat barrier provides great warmth without the weight of additional insulation.
- ⊕ Breathable, so you remain comfortable and don't overheat.
- ⊕ Durable water resistant coating on the outer fabric to keep you dry.
- ⊕ Our V-Lapped insulation doesn't compress against the wind, meaning performance and warmth isn't lost.
- ⊕ Lightweight garment that is soft & flexible.
- ⊕ Reziseal® compatible collar and water-resistant stretch cuffs designed for warmth & comfort.
- ⊕ Perfect for offshore sailing conditions.
- ⊕ Highly water repellent lower leg panels for added protection.
- ⊕ Waist adjusters & soft, low profile shoulder design.

FULL ZIP POLARTEC® FLEECE JACKET ♀

SKU JKT-0032-W-BLK

SIZE **WOMENS** XS S M L XL

BLACK

FEATURES

- ⊕ Super soft Polartec 100% recycled microfleece.
- ⊕ 159 gsm fleece provides warmth without weight.
- ⊕ High pile surface provides good insulation but remains highly breathable.
- ⊕ Fine cut fleece has smooth finish, great as a mid-layer or stand-alone jacket.
- ⊕ Tightly knitted microfleece is highly durable, holding its form after extended use.

FEATURES

- ⊕ Rapid moisture wicking transfers moisture away from the body to the outer face fast, so you stay dry.
- ⊕ Its high wicking properties means moisture evaporates fast and the garment dries quickly.
- ⊕ Excellent thermal insulation means you stay warm in even the coldest climates.
- ⊕ Its unique fabric construction regulates your temperature even during high periods of activity.
- ⊕ Automatic odour control keeps nasty smells away during long use times.
- ⊕ Highly water repellent stretch woven cuffs protect against accidental water flushing.
- ⊕ Inverted stitching provides a higher level of comfort than regular flatlock.
- ⊕ Great baselayer for any sport that demands high activity workloads.

WETSUIT | GUIDE

THE X & V DIFFERENCE

EXTREME

Our X Range of wetsuits are the pinnacle of performance. Designed to the highest standards and packed with all the features required for comfort, warmth & convenience. It is the ultimate choice for performance athletes, who demand the best gear.

VELOCITY

Our V Range incorporates the same superior material and high quality properties of warmth and durability as our X range but without the added extra features, giving you a lower cost range for the aspiring athlete.

A photograph of two women, likely athletes, looking down at something out of frame. The woman on the left is wearing sunglasses and a dark Zhik sweatshirt. The woman on the right is wearing a dark Zhik sweatshirt with a yellow logo and a watch. The background is a bright, hazy outdoor setting. The image has a green-to-yellow gradient overlay on the right side.

CLOTHING

The Zhik Clothing collection encapsulates the essence of Zhik - functional and technical fabrics built into great fitting, quality pieces for everyday wear.

ZHIKGRIP II TM

ZHIKGRIP II

Our patented hiking boot & strap grip system.

A proprietary pattern of interlocking ridges connect boot and sailor, Zhikgrip™ II is made from a highly durable unique rubber compound. The tapered studs lock in at any angle or position for extreme grip while still allowing easy movement & adjustment of the boot under the strap. The interlocking grip pattern between boot and strap allows you to relax muscles, lock into the dynamics of the boat and hike harder for longer while maintaining full mobility. Experience it and you will never be able to go back to hiking without it.

Hike Harder For Longer

LOCK IN AT ANY ANGLE

A BRAND MADE FOR WATER

*BORN FROM THE LOVE
OF BEING ON THE WATER*

OUR HISTORY

Zhik started through the need for innovation in the dinghy sailing market post Athens Olympics 2004. After building a reputation as the industry leader in the dinghy classes, Zhik set about revolutionising yachting gear for racing sports boats and offshore yachting, which culminated in winning its first entry into the 2017-2018 Volvo Ocean Race with Dongfeng Race Team. Zhik has always innovated and is expanding on its research and development with new projects in material science likely to change many facets of performance apparel including eco-friendly alternatives for a more sustainable future. Zhik is now growing to include new technical products that will appeal in a larger set of outdoor and marine applications.

GEAR MADE FOR WATER

Whether pushing the boundaries on the forefront of innovation, defying expectations in design and technology in water sport apparel or kicking back after the race and watching the sunset, Zhik is never far from the water. We challenge the status quo, identify problems, and find breakthrough solutions to continually set the benchmark. Tested and proven, Zhik gear is the choice of Olympic and world champions around the globe.

MADE
FOR
WATER®

ALEX THOMSON
RACING
TECHNICAL CLOTHING SUPPLIER

PROUD PARTNER

ZHIK IS PROUD TO BE PARTNERED
WITH SOME OF THE WORLDS BEST
SAILING TEAMS & ATHLETES.

Since our beginning Zhik has been involved in supporting a multitude of grass root programs, clubs and national regatta's all over the world.

Our team riders are a host of talent from Olympic champions to Volvo Ocean Race winners. We listen to our team and constantly develop better products to reach the next level of achievement for them and all who enjoy the water while using our products.
